You don't get much right do you. Interesting that the stuff you just
make up out of thin air amuses you... but come on and level with us
Eduardo, tells us what really amuses you. I think it is lying and
getting us to believe it. That is what amuses you. Come on admit it.

Wow, looks like a fine start to a carrier. The problem now is as you
have found out that you have to keep lying from that point on building
an ever larger house of cards. The pressure on you must be enormous.

I'm not sure the baptism was done right. I'm volunteering to re-baptize
you in the Rio Grande / Rio Bravo del Norte so your dual identity is
assured.

A REMINDER TO ALL -WRT- "HD" RADIO

There Is a "HD Radio" NewsGroup
HD RADIO => http://groups.google.com/group/hd-radio/
Description: This is a Group for discussing HD Radio, it's
viability in the market place, HD Radios & Receivers and
Technology, Programming, Reception, and in general
anything concerning HD Radio that shouldn't be clogging
up other NewsGroups, like Rec.Radio.Shortwave.

For anyone who is looking for an "HD" Radio Group that
is Moderated -or- Simply NOT Rec.Radio.Shortwave

Here is a List of Yahoo Groups that have something
to do with "HD" Radio News and Information.
HD RADIO => http://groups.yahoo.com/search?query=HD+Radio
* HDRadio
* HD-Radio
* HD-Radio-Engineering
* Accurian HD Radio {RadioShack}
* High Defination Radio

Plus here is a List of Yahoo Groups that have something
to do with "IBOC" {HD Radio} News and Information.
http://groups.yahoo.com/search?query=IBOC
* HD-Radio-Engineering
* Sangean HDT1 "HD" Radio Tuner
* NO2IBOC = Just Say "NO" To IBOC !
* DRM IBOC HDRadio = DRM and HD Radio Forum
* AMStereoOnly = AM Stereo Only ! - Where Digital Is Dead !

FWIW - Here is another HD Radio Forum {NewsGroup}
AVS Forum > Digital Video & Audio Devices > HD Radio
HD RADIO => http://www.avsforum.com/avs-vb/forumdisplay.php?f=154
Some Good Info Here and It is Free for the Reading :o)

And Once Again The Aforementioned "HDRadio" NewsGroup

It may seem pedantic, but please don't refer to these as "newsgroups"
unless they are true usenet newsgroups. There are no "hd-*" newsgroups
on my supernews server (one of the largest in the world), so they
probably don't exist.

A custom-created group in Google or Yahoo does not a usenet newsgroup
make.

Here's a comment for you before I killfile your autoposter so that I no longer have to see the garbage it regularly spews into multiple newsgroups: What makes you think that people reading the other newsgroups in the rec.radio.* hierarchy want you adding to the pollution by crossposting your FAQ to all these other groups where it does not belong?

I maintain the FAQ for the alt.sports.football.pro.buffalo-bills newsgroup. I do not crosspost it to the corresponding newsgroups for the other 31 NFL teams.

For what it's worth, I am currently subscribed to rec.radio.shortwave and rec.radio.scanner; before your group started crossposting all this garbage to other newsgroups I was also subscribed to rec.radio.info and some of the rec.radio.amateur.* newsgroups. I unsubscribed from rec.radio.info and several other groups specifically because I got sick and tired of seeing your drivel crossposted to all of them. Why don't you just stick to your own group?

> that is only accessible to him.

You have long tried to obfuscate the fact... the amazingly simple fact...
that the farther you go from a station's transmitter, the fewer are the
people who listen to it. In studies of millions of ZIP Code specific
listening incidents, it can be seen that metro area AMs get few incidents
outside of the area where the measured field strenght is 10 mV/m or better.
Outside that area, there is little if any listening.

I am not a student of propagation theory. I am a student and practitioner of
radio programming. Knowing where a station may successfully get listening is
a key to any programming endeavor. Wasting time where the signal is not good
enough for the average listener to enjoy listening is counterproductive. The
listener cares not how the signal gets to the radio but cares in extreme
whether the osund is clear, free from interference and enjoyable to listen
to.

The rest of your technobabble is irrelevant to me and the listener.
>
> He is wrong on semiconductor technology, wrong about the business of

> insider information we don't share in.

The rollout of HD is pretty much on schedule, from the iBiquity point of
view. The ad campaign by the HD Alliance sucks, but many HD broadcasters are
not members of that group and so have no influence.

The only thing any of us in radio stations needs to know is that less
costly, low power chips are coming in 2008. That has been stated and
confirmed. There are no news articles or bona fied reports to the contrary.
Your opinions, since you are not in boradcasting, are pretty much valueless
in this instance.

The single fact you have posted on "topography" involves one road, connecting the LA market with the Ventura market, which has a tiny amount of traffic compared to all the roads in LA and Orange Counies (the LA metro) and is thus irrelevant. Your remark did prove you did not know that all listening irrespective of where it takes place goes to the metro where the listener lives, not where they travel. So you were making conclusions based on fauty understanding of ratings and the business of radio... the very business you cricize so vehemently.

> The arguments on radio station reception have been the most amusing for
> me as he continued to retreat to less and less tenuous position. The
> ignorance he has expressed seems to know no bounds.

My evidence is based on where and when and for how long actual people listen, all over the US. Your comments are based on what you can get on your radio in your car or home.

If the band declines or dies, then it is certainly of interest to DXers. It also shows why the programming of the remaining profitable AMs seems all the same.. because it is all that works today.

Oh, right! I forgot that you claim stations are listened to _in_ your county that.... I hate to break it to you... aren't. The little listening to LA stations in Ventura County is mostly in the area right on the LA County border, or in cars and at work inside LA County. All I have is the data for the last 10 years from Arbitron for both markets, based in total on about 350,000 diaries and something like 5 million listening incidents.

The one with no documentation is you, as you base your comments on what you can get on your radios.

"Having your music heard (or "discovery" - whatever you want to call it) is still at the essence of any revenue model for the artists. Terrestrial radio, when they lose their "performance tax" case (and they will), will no longer rest on the laurels of being contributors to the antiquated Product Model... That's right, radio is going to drop music from its airwaves eventually... and probably in the not-so-
distant future. They're already talking about it, and once SoundExchange wins, that consensus will spread like wildfire. What will be left for music discovery will be Internet Radio, Mobile Audio (which includes cellphones and digital audio players) and Satellite Radio. All of which do a phenomenal job at helping their listeners discover music."

Music Fms will be toast.

You are really silly if you think I would have a 60 year old document still,
after living in 5 or 6 countries and a dozen cities. I don't even have a
copy of my birth certificate, either.

You need a bigger budget.

1199. Tasmania now on summer time, controversy in Queensland

Newsgroup: rec.radio.shortwave
Date: 2007-10-07 20:12:07 UTC
From: Tester <teest@test.org>
Message-ID: <3idig31bcojtn81j9l0c2app6nsiurjjnr@entropy.org>
Source record: 127069

Tasmania is now on summer time, but the ABC isn't retiming Radio National and is just telling listeners there to tune in one hour later.

Queensland isn't going on summer time but there are some people in the "Gold Coast" area who would like to go on DST despite the policy of the state government in Brisbane.

I'm not sure whether the RN stream comes from Sydney, NSW or Melbourne, Vict. or Canberra, ACT but whatever it is the 5:30 A.M. old Brit comedy slot is still on GMT+10.so apparently the most populous section of Oz ain't on DST yet.

I doubt very much listening to fundamentalist, conservative, propagandist Christian claptrap from the USA is helpful in the least. What a shame he doesn't put his shortwave radio to better uses.

And yet, you have a copy of the "certificate of completion" you
received from something you did in high school. You're precisely the
kind of freak who would have all of this stuff.

You have no evidence. You don't care about evidence. You care about
money, about doing the bidding of your masters, and about saying
anything it takes to make the money roll in. Period.

1204. Radio: HD Radio gets Bilk-o'ed

Radio: HD Radio gets Bilk-o'ed

"Did you hear about Ibiquity's and Sgt. Bilk-o's latest setback? I've lost count. What's this? The twelfth in a series? I know I'm repeating myself - but there was this NAB Convention last week where nothing was accomplished. Radio listening continues to decline; HD radio still isn't selling - and now the threat of radio paying royalties to labels is becoming very real. We'll save the latter for another time."

- Stereo ?

David, { Yes I Did Say "Stereo" }

Yes it is my understanding that the iBiquity IBOC's Hybrid
AM/MW "HD" Radio's Digital Side Bands do provide Stereo
Sound to AM/MW "HD" Radio Listeners.
http://en.wikipedia.org/wiki/HD_Radio

About iBiquity HD Radio => http://meduci.com/ .
Each AM Radio Station is allowed to transmit one
Stereo Digital Channel, and cannot stream multiple
channels, as in the case of FM HD Radio.

About IBOC => http://en.wikipedia.org/wiki/In-band_on-channel .
It is based on the Principle of AM Stereo where it puts
a Digital Signal where the C-QUAM System would put
the Analog Stereo Decoding Information.

Foti on AM HD Radio: 'No Static at All' {and Stereo}
Radio World OnLine -by- Frank Foti
http://www.rwonline.com/reference-room/iboc/06_rw_hd_foti_1.shtml
* With the rollout of AM HD Radio, the senior band not only
offers no static at all, but Wide Frequency Response that
is equal to FM, and - ready for this? - Stereo!
* It's still a bit surreal to realize that the Audio Signal

emanating from an AM "HD" Radio contains 15 kHz
Audio response, Stereophonic Sound, low noise floor
... and ... no static at all!

HD Radio Ready for Prime Time
Radio World OnLine -by- Glen Clark .
http://www.radioworld.com/reference-room/iboc/05_rw_hd_kenwood_glen_2.shtml
* AM HD is stereo (in "enhanced" mode).
* I found that the AM "HD" Radio System usually stayed in
Stereo Mode when the daytime signal strength was more
than 5 mV/m,

AM/MW "HD" Radio is 'by-design' Engineered to provide
a Pair of {Left and Right} Primary Digital Side-Bands and
that these Two Side-Band can be used to produce "Stereo"
sound from a "HD" Radio that has a Two-Channel Audio
Amplifier and a Pair of Speakers.
http://electronicdesign.com/Files/29/12194/Figure_02.gif

yes i did say 'stereo' - please corrrect me 'if' i am wrong ~ RHF

I live in the city of Ventura in Ventura county. I gave you data on what
was "listen-able" as a strong signal where I live in response to your
postings about your claim that all markets (1) only have 1 to 3 strong
signals to listen to the rest being to weak to provide noise free
listening. You then build on the false fact that (2) since these other
weak stations are noisy people do not listen to them. Then you extend
this assertion to (3) your perversion of marketing data that other
people do not have access to that those marketing numbers show the same.
Well I'm sorry to burst your bubble but I provided empirical evidence to

point one above so the rest can't follow. Now I know that logic like any other technical issue goes right over your head but that's your unique cross to bear. So again Mr. Fake hispanic / engineer / marketing guru this is your failure to understand nothing else.

Since you claim to live in LA you could hop in the car for a 60 minute drive with the 7600GR you claim to own and see for yourself but being a fake you can't do that now can you.

This is what they are called in the very header of a usenet message
according to the specification of usenet:

http://www.w3.org/Protocols/rfc1036/rfc1036.html (see e.g. section 2)

So I'll stick with the terminology defined in the standard, thanks.

I am not the only one to apply this proven-by-actual-listening standard.
BIA, the data source for advertisers, investors, raido companies, lenders,
etc., shows very few "viable" AMs in rated markets. There are, in fact, only
about 250 in the top 100 US markets per that source.

>You then build on the false fact that (2) since these other
> weak stations are noisy people do not listen to them. Then you extend
> this assertion to (3) your perversion of marketing data that other

I am sorry that Arbitron does not give away the research that costs about a
billion dollars a year to produce for the radio stations it has contracts
with. I challenge you to find a friendly subscriber who will do some
Maximi$er runs on your area of Ventura County or otherwise gain access to
the data.

You will find that, while many signals may be receivable, meaning that there
is enough signal in the area to get the station if one tries, most are not
listenable. Listenable means that real listeners find that the station is
clear and loud enough to be enjoyed; in a car it means it will stop the seek
function and will be relatively immune from power line noise, etc.

The stations you mentioned in prior posts do not meet the "listenable"
criteria because the signals are hearable but not used or usable by the
average listener.

Simple fact: there is essentially no listening to weak signals. When the
signal is harder to tune, gets interference or static or noise, people do
not listen. This is shown by millions of listening incidents over many
years... outside the strongest signal areas, there is no listening. It does
not matter what the principle is that determines attenuation of signals...
bad signals do not get listening of any consequence.

>

Most radio listening does not take place in the car. And driving around with one expensive radio that is not typical of that which the average listener has is not a good test. A better test is to do MapMaker(tm) runs with Arbitron data (description at arbitron.com) and compare the listening locations against the signal contours.

Next.

Culture can be acquired, and frequently is, by living among a culture that
is not that of one's birth.

Here is a new flash for you. Employers want a birth certificate along
with a SS number. You will need it to get a passport. Many government
agencies will not give you a license to operate a business without one
but since you are fake it's not a problem for you.

Wrong-o. Employers will accept a passport, since a birth certificate is
required to get one. For legal immigrants, a green card (which is now pink)
is used as ID, as empoyers may not be reasonably expected to verify or even
be able to read birth certificates from foreign countries. So there are many
cases where a birth certificate is not required.

> You will need it to get a passport.

But not to get it renewed. As long as you renew your passport on time, you
never need a birth certificate after you get your first passport. My first
passport was issued in '58, renewed in '63, and so on.

> Many government
> agencies will not give you a license to operate a business without one
> but since you are fake it's not a problem for you.

A passport will be considered better than a birth certificate, as it is less
susceptible to falsification.

Well, that's not the argument now is it o' fake one. A station with a
signal strong enough to be noise free has not much to do with your faked
marketing numbers.

> >You then build on the false fact that (2) since these other

You are not sorry. You are proud to have singular access to this this
data among the posters to this news group. You think this makes your
arguments irrefutable but their is a problem with that thinking as that
data and facts derived from them have nothing to do with your original
assertion.

> You will find that, while many signals may be receivable, meaning that there

Nope, that's not what I found. I gave you empirical data from table top,
car, and hand held radio that refutes such an assertion.

> The stations you mentioned in prior posts do not meet the "listenable"
> criteria because the signals are hearable but not used or usable by the

Well if you were a real person you could find out in about 60 minutes
but since you are fake I guess you can't.

So after spending the 60 minutes driving time with the car radio step
out of car with your fake 7600GR portable and tune around on it. With
your fake 7600GR in hand and the list of stations I gave you in the
other hand find out for yourself.

It's a little more relevent than that.

Some of us use real usenet newsreader clients (instead of the Google
web interface), so the Google and Yahoo groups aren't accessible using
these applications. There are lots of other political and practical
reasons why Yahoo/Google "groups" are significantly different than
usenet newsgroups.

..."The program, "Thru the Bible," each day interprets a Bible
verse in an old-fashioned, folksy manner. It has been translated
into 108 languages. Hundreds of hours of McGee's recorded sermons
are heard by millions of radio listeners every day in 219
countries.

McGee's reach is unmatched, even though he has been dead since
1988."

It not considered better, it is another document proving where you were
born. This is a problem you have with your history.

> as it is less susceptible to falsification.

You are the expert on falsification so I'll have to defer to you on that.

David,

KFIV 1360 kHz in Modesto, CA which is an "AM" Talk Radio
Station now broadcasting in 'IBOC' the Voice Audio Sucked Too !

The KFIV Engineering Staff needs to go out to the Edge
of their Distant Coverage Area : Elk Grove + Pleasanton
+ Los Banos + Chowchilla + Sonora + Jackson
and actually Listen to an Over-the-Air Broadcast and
specifically the Voice Quality of their Talk Radio Station.
Predicted Daytime Coverage Area : KFIV 1360 AM
http://www.radio-locator.com/cgi-bin/pat?call=KFIV&service=AM&status=L&hours=D

-but- the bumper music sounded 'ok' ~ RHF
.

David,

Strangely enough I was listening to them this very early
morning ~3 AM and their Analog "AM" Sounded OK.

Hi folks,

Im a software developer and Im curious as to what happened with the web-based radios that used to be online. I think they were managed from Java or straight HTML. Im a fan of SW, but alas I had to sell my equipment a long time ago and haven't gotten back into it yet. (Looking for a decent receiver, but thats a different issue). I'm curious to code something that is a little better than the past offerings for web-based radios, using AJAX technology for what would be a more responsive user interface. Is this something that is rather dead at this point, or is there still interest?

Why does he bother? It's because he's built up this fantasy construct over the past 50 years or so, and it's beginning to unravel one thread at a time.

I can hear the rivets popping...

Good Evening, Pirate Radio Addicts!

The Crystal Ship is going on the air this evening at about 0100 UTC on 3275 kHz.

Sorry, no parallel freq tonight, as its too hot upstairs in Michigan to turn off the air conditioner, and we have to choose. LOL

We shall sign on with those Eastern Block shortwave standards from the Cold War seventies, "The Internationale", the Soviet National Anthem, and 'The Crystal Ship'.... in homage to our early 80s "socialist" reputation. After that, who knows. Maybe running past 0300 if anyone bothers to log us on the FRN http://www.frn.net/vines/ ACE loggings section.

Transmitter is Johnson Viking Valiant #1. Antenna is the 90 meter bent and distorted dipole.
Beer is the workhorse Miller Genuine Draft.

Aloha!

No, the bad news has to do with corporate stooges who'd gladly sell
broadcasters and listeners down the river for a little dough.

Phasors can not be obsolete. They can be badly designed, hi-Q and narrowband, but there is no real change in components (coils and caps and vacuum caps) or design since the first directionals on AM were used at WSUN and WOR in the 20's.

Why? For the same reason I was in the debate club in school. In fact, I remember one topic I had to defend was a mock UN debate on "El Ecuador ha sido, es y siempre ser&#65533; pa&#65533;s amaz&#65533;nico" which was basically the same as the slogan, "haz patria, mata un peruano."

What some people fail to understand is that culture is acquired, not hereditary. I know an American / Anglo family that adopted two kids from Mexico... the kids are as American as anyone born here. Or look at the Jolie / Pitt adopted kids; despite their birthplaces, they will be as American as their parents.

Why does he bother? It's obviously VERY important to Tardo that people think about him. That's why he has a website detailing every little thing that happened to him in his life. It's why he has misrepresented his academic history, his job title, etc. It's why he's driven to post to this group dozens of times day. Of course, Tardo understands that crapping all over him has become the favorite hobby of all the regular posters here, but that's okay because at least it's something...it at least keeps him at the center of attention, even if the tone of the attention is unflattering and not particularly serious.

In a perverse sort of way, things have worked out pretty well for everyone. Tardo gets lots of attention; the rest of us get some cheap laughs. No harm, no foul.

I have a homebrew hf receiver online with realtime audio (not streamed)
and realtime tuning (not transactional). Only one person (another
online receiver operator) has ever used it despite advertising its
availability on various N.G.s I suspect it is just too different
from the prevailing variety of webradios.

Regards,

Michael

Yeah, like they could figure out anything as complicated as that. The stuff they can figure out is a way for an interloper such as yourself to obtain 'citizenship' fraudulently.

Nice bunch of folks.

Deportation will be our national salvation!

Right. Bigot alert.

The first person to invent a working color TV system was Guillermo Gonzalez Camarena, of Mexico City. It received a US patent before the NBC or CBS systems.

And there are no border blasters left, despite your header.

XERA went away with NARBA. XERF quit running 250 kw in the 80's and ran 17 kw for more than a decade until IMER put it back at 100 kw a few years ago. XEMO / XEROK is running 50 kw, not the former 150 kw because of the cost of energy and the fact that 50 kw more than covers Cd. Ju&#65533;rez, one of Mexico's largest markets.

In any case, AM has even less audience in Mexico than the US, so it is unlikely that any AM HD will show up there.

What the heck does that have to do with your non-existent 'baptismal'
certificate or your non-existent Ecuadorian amateur license?

You couldn't get a job where I work. They expect you to be truthful on
your resume and a background check will be made so lying would be
fruitless.

Just wait till Real ID goes into affect. I'm still trying to figure out
where your average teenager going for their first driver's license is going
to find 4 pieces of picture ID to prove they're a citizen. Hint, one of
them won't be a passport, since you also have to have multiple picture ID to
get that..

Ah, but Edweenie would then go pick fruits (and maybe play with some as well) in Mexico where apparently it only take a few spendolas and a greedy official to get 'citizenship'.

Adios Edweenie!

The big thing for an Analog AM/MW Radio Station that
is going to begin IBOC {Integrated} Analog and Digital
Broadcasting : Is will their Single Tower Non-Directional
Antenna handle the 30 kHz Bandwidth required of IBOC ?

beyond that things get complicated -bmaoe- ~ RHF
.

Yup. That's like my cousin's son. My cousin is of Colombian
extraction. He married a Dominican lady. She died shortly after
childbirth, so junior is being raised by the Colombian side of the
family (my side).

The child's way of acting, his mannerisms, expressions, idioms,
accent, etc. are all Colombian; despite his being half Dominican.

No, to get a passport you need to go in person the first time and TAKE two
pictures, proof of citizenship and one picture ID.

http://travel.state.gov/passport/passport_1738.html

Most people don't have more than one piece of picture ID; usually it is a
driver license or a state ID issued in place of a license.

Gorman was the PD of WMMS in the 70's... and into the 80's. One of the
finest rock stations in America at the time. But today, he has little
influence in the industry. He wrote a book about the station and Cleveland
in the 70's.... which is at least a decade after their river caught fire.

Most people don't pretend that they're Hispanic!

Most people don't pretend that they had an amateur radio license!

Most people don't pretend that they 'moved' to Mexico at age 13.

Most people don't pretend that they owned radio stations.

Most people don't pretend that they were forced out of Ecuador at gunpoint.

Etc., etc.

Yeah, I understand that feeling since you would have to display a high
degree of integrity and that would be very hard for you.

Sounds like you will be looking for another job soon so you might want
to dust off that resume.

Most single towers are flat enough and don't have a disparate enough
reactive component to do HD easily. The problem is with directional systems
that were designed for easy tuning and have a high Q. These have to be
broadbanded... most larger stations already did that to make analog audio
sound better.

Our old friend George Fetter is out there raising hell again!!!
He was complaining on EHam.Net about not receiving a Ham Radio QRP kit
from some supplier.

BOY DOES THAT SOUND FAMILAR ????
That is a new one. A person that commits a fraud reporting a possible
fraud.
Sounds like testimony in court of a felon in order to convict a
felon. A good jury would see through that.

Someone did call him out about being a well known con-man and knew of
his arrest, but he didn't know that he had pled "No Contest" to a 3rd
Degree felony charge of an Organized Scheme to Defraud" in January/
February 2007.

Suddenly the missing package showed up.................
I wish he would shut up and just disappear, but as many of you have
stated, "George is his own worse enemy".

Hogwash! After all, you stated in the past that you 'moved' to Mexico at age 13!

But on the other hand, I guess one might make decent money giving blow jobs at
age 13.

But, the way I've heard it is that you were, let us say, at least for that time and place, just a bit 'peculiar'. That is why she sent you 'away', because you just might (and most likely would) interfere with her little 'social scene' in Cleveland.

One must understand that Edweenies mother went to Wellesley College (where Hillary went!), and 'appearances' mean everything.

I still LMFAO!

d'Eduardo - And just how many of these 'weak' AM/MW
Radio Stations on the Mexican side of the US {Southern}
Border are Broadcasting in English ? ? ?

? 50 KW ? with the right Antenna gets you a lot of beyond
the 10 mv/m Contour and deep into the heart or Gringo-Land.

So I guess my Blinking Blue Light from XEPE 1700 kHz
in Tijuana, BCN up here in Twain Harte, CA is not just
my imagination.
* In the English Language with the best Audio
from 5~6 AM to 8~9 AM most mornings
* About ~750 Miles

With One Exception - I Ask Myself : What IBOC ?
All I See Is The Blinking Blue Light ! ~ RHF
In That Distant Land* Where IBOC Fears To Go :
Life Exists and Radio Listeners Live Beyond the 10mv/m Contour.
* Twain Harte, CA -USA-
.

So what culture is it where the preference is to lie about anything you
post on Usenet?

I'll bet I've been around more people of different cultures than you
have.

Satisfied. Hmm. That explains why you're so desperate to be the center
of attention, and why you post here twenty times a day, and why you
can't tell the truth about who you are and what you've done. Christ,
I'd hate to see what you're like when you're unsatisfied.

Most single tower AMs have more broadband ATUs than directionals. It is a lot easier to tune a directional system with high-Q circuits in the phasor, so throught the 60's, most directional systems had such narrow band, high-Q circuits.

Internationally-renown UFOlogist Stanton Friedman debates Frank and John over "Cosmic Watergate," the cover-up government knowledge of alien visitors to planet Earth.

Mr. Friedman, who has several degrees in physics and has been speaking extensively on UFOs since the late 1960's, gets into a heated debate with Frank in an interview that is very different from those heard on the run-of-the-mill "conspiracy" shows.

http://therightperspectivepodcastblog.blogspot.com/2007/09/stanton-friedman-vs-right-perspective.html#links

The Right Perspective is heard live every Friday 10pm EDT over shortwave WWCR 3.215 Mhz and the Internet at www.therightperspective.com

If the Q is too high for an evolved transmission scheme, and cannot be
"adjusted" to a more broadband spec, the phasor is obsolete.

I had one of them several years ago. After I changed all of the bandpass filter switching diodes to 1N5767 PIN diodes, the IMD products were eliminated. It was a well built unit, with glass epoxy boards, but I wasn't crazy about the flourescent display. I eventually traded it off.

"Mexico Says Hang on a Minute!"

"Mexico wants U.S. radio regulators to re-think their decision to
allow AMs to go IBOC at night and FMs to operate on the extended
hybrid digital carriers. Our neighbors to the south say they are not
happy the FCC authorized its recent "final" IBOC rules governing
broadcast transmissions without first coordinating those through
international treaties."

http://www.radioworld.com/pages/s.0121/t.7715.html

Here, send the company some comments:

http://www.radiorama.com.mx/secciones.php?sec_id=4&ent_id=6

I guess that Mexico has realized that the FCC is determined to destroy
broadcast radio and auction off the bands at a later time.

The guy sure knows how to spice up his EBay adverts. The problem is he blows himself out of the water with his unbelievably bad English and his poor punctuation. There are at least 30 grammatical, English or punctuation errors in his JRC NRD-525 advertisement. The equipment looks good but just how professional can the guy be with such a bad command of basic English is beyond me.

The HD Radio Lunatic Fringe

"The new HD evangelists - who preach hell, fire and brimstone about the necessity of switching terrestrial radio stations from analog to digital are now apparently targeting the religious broadcasters who might be able to multicast to many audiences using HD's ability to form subchannels."

That Radio-Mart dude is like a kanker.It's like the 1954 blue and white Pontiac car that was owned by a little old lady and only driven to church and the food store.Always very well maintained and kept in a closed garage.

Gooder -or- Baddaer English

Radio-Mart's eBay FeedBack Score is :
Feedback Score: 5684
Positive Feedback: 97.6%
* Members who left a positive: 5817
* Members who left a negative: 144
# All positive Feedback: 9917
Which means at least 5961 People
bought something from him on eBay.

Actually a nice read by a Rabid Anti-HD-Radio Hater
{ The Other Half of the HD Radio Lunatic Fringe }

For Religious FM Radio Programmers two "HD" Radio Channels
on the same Frequency would mean that they could have :

The Word {The Message} on one HD Channel

The Spirit {Songs of Praise} -aka- God Centered Entertainment
on the Second HD Channel.

Both Asking for Money {Donations} On-the-Hour Every Hour.

- -
-

And Speaking of the "HD Radio Lunatic Fringe"
how are you this morning PocketRadio ?

A REMINDER TO ALL -WRT- "HD" RADIO
.
There Is a "HD Radio" NewsGroup
HD RADIO => http://groups.google.com/group/hd-radio/
Description: This is a Group for discussing HD Radio, it's
viability in the market place, HD Radios & Receivers and
Technology, Programming, Reception, and in general
anything concerning HD Radio that shouldn't be clogging
up other NewsGroups, like Rec.Radio.Shortwave.
.
For anyone who is looking for an "HD" Radio Group that
is Moderated -or- Simply NOT Rec.Radio.Shortwave
.
Here is a List of Yahoo Groups that have something
to do with "HD" Radio News and Information.
HD RADIO => http://groups.yahoo.com/search?query=HD+Radio
* HDRadio

* HD-Radio
* HD-Radio-Engineering
* Accurian HD Radio {RadioShack}
* High Defination Radio
.
Plus here is a List of Yahoo Groups that have something
to do with "IBOC" {HD Radio} News and Information.
http://groups.yahoo.com/search?query=IBOC
* HD-Radio-Engineering
* Sangean HDT1 "HD" Radio Tuner
* NO2IBOC = Just Say "NO" To IBOC !
* DRM IBOC HDRadio = DRM and HD Radio Forum
* AMStereoOnly = AM Stereo Only ! - Where Digital Is Dead !
.
FWIW - Here is another HD Radio Forum {NewsGroup}
AVS Forum > Digital Video & Audio Devices > HD Radio
HD RADIO => http://www.avsforum.com/avs-vb/forumdisplay.php?f=154
Some Good Info Here and It is Free for the Reading :o)
.
And Once Again The Aforementioned "HDRadio" NewsGroup
HDRADIO=>http://groups.google.com/group/hd-radio/
.
hy dee ray dee oh ~ RHF

No, that is not obsolescence. That is just a design criteria. Any phasor can
be broadbanded.

Yeah, somehow the number of illegals grew from the ICE, FAIR and other reputable source 11 to 11.6 million to 38 million. This irrational fear of immigrants sounds like the story line of a new Steven King novel... the Langoliers are now the Mexicans. Jeesh. I think the poster is really a Pastuzo.

1366. BROADCAST RADIO: continuing to suck wind

"BROADCAST RADIO: continuing to suck wind"

Well, yet another Top 40 station near me officially bit the dust almost exactly an hour ago. At noon Eastern time, the local Indianapolis pop/hip hop station, WNOU "Radio Now" 93.1, switched to a temporary format of all-Christmas-music-all-the-time through the end of the year, at which point it'll be replaced by an FM-dial version of local WIBC's news/talk format.

The local owner of the station, Emmis Communications, has been on the financial ropes due to mismanagement and an overly-aggressive expansion strategy for quite some time now, as it struggled (and failed) to try to keep up with the radio-industry behemoth, Clear Channel Communications. But even Clear Channel has seen more than its fair share of financial woes lately, and what was once the 800-lb. gorilla in the radio universe is now on the cusp of having to be taken private just in order to be able to stay afloat.

Emmis can spin-doctor its "choice" to switch from a music to a talk format all it wants, but anyone who's paying the slightest bit of attention in the radio industry knows damn well what is really going on here. The funding for the Clear Channel private equity deal dried up at about the same time that the RIAA released its latest batch of truly dismal numbers regarding the state of purchased recorded music in the country. Quite simply, no one cares about playlisted radio any more. Since it's becoming easier (not to mention cheaper) to put together one's own personalized playlists online through the myriad of streaming options available out there, even so-called "HD radio", which broadcasts in the digital frequencies between the regular analog ones, hasn't taken off the way industry peeps expected it to. And that means advertisers, the lifeblood of any "free" music station, have been deserting in droves for other avenues.

Just about the only viable option LEFT on the FM dial any more is news/talk, just as it was in the late seventies when listeners deserted AM en masse for greener pastures. And on-air yakkers are a lot cheaper to find, by the dozen, than their relatively more diva-esque DJ counterparts, who get paid just as much but are on the air something like 80% less.

This is it, people. You read it here first. Music is officially dead. It's the end of the world. Society is on the brink of utter collapse. Get in your bomb shelters now, we're all gonna die. XD

Music is hardly dead... there are 20 FMs in the market, 16 with signals good enough to be considered viable. On single station that changed from a less-than-successful music format to talk does not mean music audiences are down... it just means that the change is on to move successful AM formats to Fm where they are accessible to under-55 listeners in a form they will use. WIBC (AM) has been third or fourth in the market in the last few years, and used to be a solid #1. The decline in 25-54 has affected them, so they are going to put the format on FM where they believe they can recover the younger, salable age groups. They will put a sports format on 1070, which is a good use of the facility.

In that market, there is only one other AM in the top 20, a Black gospel station. After that, no AM has more than a 1 share. There were only 11 AM shares total in the market in Spring, and less than 7 shares in 25-54. WIBC moved to FM because their opportunities on AM were very limited and in decline. This is what I have been saying for years... the only viable AM format, talk, and its variants, will be moving to FM over the next few years and AM will be limited to very niche formats and brokered services at that point.

Source record: 127292

Heard my 2nd AM/MW "HD" Radio Broadcast - Today 8 OCT 2007
http://groups.google.com/group/hd-radio/msg/732449d134405699

Time : 07:48 AM PDT in Twain Harte, CA -heard- KLOK 1170 kHz
in San Jose, CA - Distance about 120 Miles

Radio Station : KLOK 1170 kHz @ 50,000 Watts from San Jose, CA
http://www.univision.com/content/channel.jhtml?chid=9598&schid=11986
http://www.univision.com/content/channel.jhtml?chid=10383&schid=10596
-IBOC ERP- Digital Signal at 1% would be 500 Watts.
Transmitter and Towers are located in South San Jose
Evergreen Valley Area - Spanish "Radio Tricolor"
http://www.fcc.gov/fcc-bin/amq?list=0&facid=41339
KLOK 1170 kHz has a Nightime reduced Power 5 KW
http://www.radio-locator.com/cgi-bin/info?call=KLOK&service=AM
http://www.radio-locator.com/cgi-bin/pat?call=KLOK&service=AM&status=L&hours=D
Heard mostly Spanish Music with Traffic Report and had a
Solid Blue Light {IBOC Signal Lock} for about 10 Minutes;
and then On and Off several times over the next 15 Minutes.

KLOK 1170 kHz - Audio Sound Notes :
* Male and Female Voices sounded OK {Natural}
* Music in Stereo was Very Good could easily tell when
the Digital Stereo Signal Dropped and the Sound was
again Mono-Audio only; the "AM" Digital Stereo did
have a better Audio 'Presence' to it.

HD Radio - Radi-Osophy HD-100 Radio

Antenna - Newly re-configured the 6'x24' Rectangle Loop
Antenna into a Triangle Loop Antenna 20-Feet per Side
pointed toward Modesto, CA {SF Bay Area}.

What's funny is the schoolyard mentality you bring to every group you post in. Assuming you work in broadcasting at all, it'd be interesting to know what your colleagues think when they see the nature and magnitude of your usenet activities. You're very fortunate that your desperate need for attention will probably allow you to tolerate any embarrassment, no matter how extreme.

That's right Steve - destroy AM with IBOC, then move the news/talk/
sports to FMs.

"Fresh FM vs. Stale FM"

"'No FM' is really where I see the next generation and future ones
heading. It is very unlikely they will redirect their attention from
iPods, computers, social networks and, now, mobile devices back to a
radio. And they certainly don't want a radio in these devices."

http://insidemusicmedia.blogspot.com/2007/09/fresh-fm-vs-stale-fm.html

If continued lack of interest in music FMs don't kill them off, then
the new royality rates will. The whole terrestrial industry is dying.

Let's see... even if I posted 20 times a day, at maybe a minute or two a post, that is a tiny bit of time. Considering one only is supposed to work 8 hours a day, there seems enough left over for a few posts.

There is nothing embarrassing about defending a point of view, even one unpopular in certain circles.

The ageing and decline of AM in salable demographics goes back to the 80's,
and has simply gotton worse of late. It is an issue totally unrelated to HD.

And Gen Y has abandonded FM radio for iPods, cell phones, Satellite
Radio, etc - as I said, your whole industy is screwed.

There is no evidence of this in radio listening surveys. There has been an erosion of time spent listening going back to the late 80's, but there is no hastening of the trend since the iPod or satellite radio became available.

Of course I'm not talking about time. None of your colleagues
(assuming you have any) would care to count the minutes you spend on
usenet, but they would be plenty surprised by the nature of your
posts. Even more interesting to them would be the more general project
of planting yourself in this group, doing your best to initiate
squabbles by spamming the group with one off-topic post after another,
and then engaging in your little, sissy "battles" about IBOC or
whatever is convenient. You actually alternate between sounding like a
12 year old on a playground and the old lady who lives down the street
from me, the one who spoils for any kind of "dispute" she can
generate---anything to bring someone into her life so that she's the
focus of their attention.

Source record: 127306

"What is "Xohm"?"

"According to Ars Technica, the Xohm network is slated for a full launch in Chicago, Baltimore and Washington D.C. by March or April 2008. Sprint plans to follow the launch with a nationwide rollout, and should reach all major markets in the U.S. by the end of 2008. Repeat this over and over: The Internet is radio's future. Tick, tick, tick"

http://www.hear2.com/2007/10/what-is-xohm.html#comments

"Streaming Internet Radio in your Car"

"Internet radio streaming to your car isn't a pipe dream for years away. It's available right now, and using the new Ford SYNC, it's available this Fall using voice command. See this video for a demo... Mark Ramsey calls it "geekcasting" - but only beca.."

http://www.hear2.com/2007/10/this-is-what-i-.html#comments

"The end of Talk Radio?"

"Any rational view of radio's future - and I'm talking 5+ years out here - will conclude that Talk Radio will be a more important piece of the pie than Music Radio. That's because of the infinitely expanding choices for passive audio entertainment which are just over the horizon mixed with the growing demand from listeners to experience music audio with customization and control."

Comment:"'Speech' radio as we call it in the UK is hugely popular, with the national FM speech station Radio 4 getting a 19% reach and a 11% share of UK listening. Yeah, I suppose with mods it would have been ok. A friend bought Yaesu FT-ONE transceiver from an estate sale, and it had a fantastic receiver in it. I wanted one really bad until I realized that his had been extensively modded with PIN Diodes, and was tremendously better than a stock radio was. By the time I found one that was reasonably priced enough to get fix and modify, I didn't want to mess with it anymore.

It hadn't occurred to me, but I'll bet his colleagues would be plenty
surprised by the lies he's told here. My guess is that he's more
careful in his life "offline", but people like this always forget how
easily the line between on and offline gets crossed. Sooner or later
this kind of crap will catch up with him. Like I said, though, I'll
bet that he can tolerate embarrassment much better than most people
because even embarrassment is a source of what he needs more than
anything: attention. Maybe this is a good thing...hard to say. Trying
to distinguish good from bad scenarios is pretty meaningless in this
context.

PPM Houston for August:

Teens 12-17 91.6% of the group uses radio
18-24 92%
25-34 97.2%

Considering no radio station in the US programs specifically for teens, that is a significant number. In the same market, in 10 years ago, 95.7% of teens listened, 97.9% of 18-24 and 97.8% of 25-34's listened.... years before satellite, iPods, etc.

The erosion in teens is less than a half-percent a year, and ractically nothing in 25-34.

Future HD Radio Chips from Texas Instruments (TI), University of
Arizona
http://digital-am-fm.com/2007/06/future_hd_radio_chips_from_ti.html
-by- Glenn Fleishman - 2 June 2007
http://groups.google.com/group/hd-radio/msg/e4b55d7ff8f29bec

* Their aim is reduce the Chip count, requiring just a
single Chip for all analog and digital tuning.

* The fewer Chips, the less cost not just for Chips
but supporting circuitry.

* HD Radio cannot become mainstream until Radios
featuring the Technology are available in every form.

I think you're probably right about that. People like to be in control of their own listening, and they like to have as many choices as possible, especially when it comes to music. FM broadcast will never be able to keep up with the internet or with ipods and similar devices. FM broadcast is already a dinosaur, but as we've seen many times in this group, some people love dinosaurs--especially when those people's professional interests are entangled with the fate of dinosaurs.

These chips will make no difference, as consumers do not buy radios anymore. Cell phones companies are not intereed in HD Radio, as Clear Channel tried to stream its staion on Sprint but gave up. I was in a Ford dealership today buying my boys a new car and the salesman got HD Radio mixed up with Satellite Radio and the guy in charge of installing HD radios had not installed a single one. They are however very excited about Sync, as they have to get "certified" in it before it comes out in 2008. Many of the Ford cars have factory-installed Satellite Radio sitting on the lots. LOL!

To all Canadian readers of this newsgroup I would like to wish each of you a happy Thanksgiving.

As an American I took pause today to offer thanks for having such a wonderful neighbor as Canada - a great nation with an admirable citizenry.

Additionally, I would like to take this opportunity to apologize for the rude, profane and uncivilized behavior directed toward you by a few noisy ignorant Americans within this group. Rest assured they do not represent the thinking of Americans.

Respectfully,

A.W.S.
President
GLT Shortwave Club

1413. Radio: Internet Radio or HD Radio. You choose!

Newsgroup: rec.radio.shortwave
Date: 2007-10-09 00:24:15 UTC
From: IBOCcrock <ibocisacrock@yahoo.com>

Source record: 127333

"Radio: Internet Radio or HD Radio. You choose!"

The first video is a pitch from Ford for their new optional SYNC, which, among many other things, allows one to listen to any Internet Radio from anywhere in the world.

The second video comes from an actual HD Radio test drive demonstration in the Chicago market. The only thing lacking was a station playing Bruce Springsteen's "57 Channels (And Nothin' On)."

I searched in vain for a Ford pitch video on HD Radio but, wisely, they didn't do one.

Which one would you rather have? SYNC or HD Radio?

What would you want your company to be allied with? SYNC or HD Radio?

Here's the choice - supplementary channels of varied audio quality from the same radio chains that deliver today's unimaginative terrestrial radio formats or worldwide radio of every imaginable format and style where the passion is in the performance?

(I know I'm stacking the deck and swaying your decision - but, please understand. I never have and never want to be associated or connected with any current HD Radio product from Ibiquity and the HD Radio alliance.)

Let's say you're one of the rarified few that actually found what you believe to be a half-decent HD Radio channel. Chances are you'll find the same exact station streaming on line - and considering it's a side channel - it'll probably sound better on- line than on an HD Radio. And you won't lose the signal when you're driving by tall buildings or near hills and mountains.

Amazing, isn't it. The HD Radio Alliance filled the unreservedly worthless job of running the joint with the unreservedly useless Sgt. Bilk-o, ex of Clear Channel where he was just as pathetic.

How can he knowingly subject the radio industry to further traumatic events?

Can't wait for the blame game to begin. It didn't happen because.....

I wonder how Sgt. Bilk-o sleeps at night knowing that while the iPod will go down in history as one of the most effective marketing campaigns since Windows - HD Radio's will be forever enshrined as number one in the High Tech Hall of Shame.

And we used to be convinced that the failures of Circuit City's DiVX DVDs, the CueCat, and the Eyetop Wearable DVD Player could never be topped?

Maybe the sanctimonious Sgt. Bilk-o can recycle the excuses for the failures of AM Stereo and FM Quad - except that even they were more successful in reaching consumers than his folly.

At this stage, Sgt. Bilk-o has to be wondering what, if anything, will mark his time on earth.

Maybe he's asking himself who will mourn HD Radio's passing.

And, most of all, who'll apologize for the time and money spent, the years the radio industry bought into it, and the deceitfulness suffered because of Ibiquity and the HD Radio Alliance's misguidance.

http://gormanmediablog.blogspot.com/2007/10/blog-post.html

You know- I can have all my own programmed music that I want - and
the world has been able to do that since we started having 8 tracks in
cars - then cassettes - then CD's - now ipods and MP3's - but I still
like listening to the radio. Mostly - FM - some AM -- but I still -
almost always turn on the radio. I listen to the stations that play
all sorts of stuff and include commercials. I realize I am an oddity
here -- but there are still people out there that prefer to listen to
terrestial radio. It's a bit like choosing to watch non - cable TV
stations as opposed to having dozens of channels to choose from
courtesy of DISH networks. And I think - but I could be wrong - that
terrestial radio will survive. Just like AM has survived since the
advent of FM. AM is not the same animal it was - but it's still
there.

Protow 2,

Check with the CFRX 6070 kHz Radio Listener's Group
http://ca.groups.yahoo.com/group/CFRX/
The group is intended for those who listen to CFRX (6.070 MHz
in the 49 meter band). CFRX re-broadcasts all the programming
of CFRB 1010 KHz. We can share comments about reception
or programming.
http://ca.groups.yahoo.com/group/CFRX/

CFRB, or "Newstalk 1010" as it is often referred to, is an
CFRB => http://www.cfrb.com/
AM Radio Station in Toronto, Canada, broadcasting on
1010 kHz, with a Shortwave Radio simulcast by CFRX
on 6070 kHz. => http://en.wikipedia.org/wiki/CFRB

OWNED -by- Standard Broadcasting Corporation Ltd.
is a Canadian Radio Broadcasting Company.
http://en.wikipedia.org/wiki/Standard_Broadcasting

CFRB/CFRX - Radio Reception Reports
http://www.odxa.on.ca/cfrb/reports.html
-via- Ontario DX Association (ODXA)
ODXA => http://www.odxa.on.ca/

ODXA - Ontario DX Association Group
http://groups.yahoo.com/group/odxa/
An Ontario-based Radio Listener's Club made up of
Shortwave Radio Listeners (SWL) , Amateur Radio Operators,
Scanning Enthusiasts, AM / FM / TV "DX" Enthusiasts
and pretty much anything to do with Radio Communications.
- - - This includes Broadcast Radio Listeners (BCL)

hope this helps - iane ~ RHF

There are *already* alternatives that do not require a separate home
network.

It's important to be realistic about this. It is trivially easy to
stream audio over the internet. It doesn't require transmitters, huge
antennas or similar investments. The internet itself provides
everything you need.

And from the listener's point of view, you can hear absolutely everything you hear via HD radio or any other kind of radio, plus about a million additional things as well.

Furthermore, we all know that the internet isn't going anywhere. Despite the ridiculous predictions of some, the internet is not going to disappear tomorrow. This means that internet 'radio' is in for the long haul.

Wimax is coming to be deployed more and more and this, again, is unstoppable since innumerable forms of personal and commercial business will benefit from it. As Wimax becomes more prevalent, the practicality of portable internet radios increases.

Plus, listening via the internet doesn't require you to destroy a vast swath of AM spectrum. It doesn't require you to do anything except sit back and enjoy.

I will always prefer free, over the airwaves radio as well, but right now internet radio is the best friend the AM listener has because it spells certain doom for HD radio.

1420. BROADCAST RADIO : It's Still Fun To Listen Too !

What kind of problem do you have in mind? The FCC, for the most part
requires 1/4 wave for all but class A stations, that are supposed to be 1/2
wave. There are exceptions, granted due to the lack of enough land or FAA
regulations and zoning issues.

Probably not.

As usual, RHF buries us in unnecessary lnked detail that few will ever pursue.

Weren't there posts several months ago that 'RX was off air?

Like, per a post by <dxAce> on Feb 7, 2007... and <Doug Smith W9WI> June 17, 2007?

The question is whether the proponents of HD will succeed at
destroying AM broadcasting. I don't think they will, but it's still
playing out. If they don't, then like you I suspect that AM will
survive.

Yes. Arbitron is the most respected source for radio listening data in the
US, accepted by radio and by the entire advertising industry.

Today, 50 kw powerhouse WIBC in Indianapolis, the markets news talk station,
announce it is moving to FM in 3 months.

AM will not survive.

>

I've only heard two DRM signals, the one from Sackville
Canada and possibly another I haven't identified yet.
They are on shortwave.

I'm in southern California. I imagine there are more DRM
broadcasters in Europe.

I believe analog is going offer a greater variety of unique
international/dx signals for a long time to come. DRM
offers better quality audio but at a shorter range.
I think international shortwave broadcasters are going
to want the farther reach of analog with the view
that shortwave listeners are more interested in what is
foreign/interesting/different rather than high fidelity.

What's your budget? Get both. :)
Or get a receiver with a 12 kHz wide IF out
and you can add a DRM decoder.
(Check out the TenTec RX-340D.)

And there are a lot of other interesting thing on
shortwave besides broadcasts.

Yes, and so were the findings of the Tobacco Institute. That
research was often flawed, as well.

Concensus is not Truth.

The difference is that the audits of the Arbitron methodology are done by an independent board, principally appointed by the advertising industry, not by the NAB or some other incestuous radio industry group. The Tobacco Institute was exactly that, not a research company.

1438. Re: Radio: Internet Radio or HD Radio. You choose!

I choose FREE over-the-air broadcasts anytime. I refuse to pay for radio the same as I refuse to pay for tv. Those who wish to throw your money away on satellite radio or cable tv have that privilege. I prefer to spend my money on other things.

It's nice to be able to have a portable radio you can carry from room to room, or to the garage, or even in the back yard, not to mention taking a radio with you to the park, or anywhere else you might go. And it won't be long before the inexpensive portable HD radios start showing up on the market.

It amazes me just how many crybabies there are on this forum. I think it would be enough to just state your position and then LET IT GO.

LOL! You may want to re-read what you just wrote. Perhaps you'll see
the logical fallacy. Like I said, David, you're smarter than that. But,
thanks, again, for making my point.

IBOC Crock - OK - Is this an Evolutionary Change
-or- A Revolutionary Event ?

Media Listener {Viewer} Choices :
1940s = AM Radio + Records
1950s = AM Radio + TV+ Records +Tapes
1960s = TV + AM & FM Radio + Tapes+ Records
1970s = TV + CTD + FM & AM Radio + Cassettes
1980s = CTV + TV + FM & AM Radio + Cassettes + CD + VHS
1990s = CTV + STV + TV + FM & AM Radio + VHS + CD + PC & WWW
2000s = CTV + STV + HDTV + DVD + CD + PC & WWW + Digital Media + FM,
AM, SAT & INT Radio

The Average Listener {Viewer} has more Choices and they
now 'choose' other forms of Media over the simple beginning
choices of AM Radio and Records.

The Average Listener {Viewer} starting with the 1940s and
Two Choices they now have 12+ Choices in the 2000s.

AM Radio had Half the Pie in the 1940s and can only
reasonably expect to have 1/12th of that Pie Today.

AM Radio is still around as a 'significant' Media Choice while :
Records, VHS, BetaMax, Lazar Disc, Cassetttes, 8-Track,
B&W TV, etc have all been out-moded and are gone . . .

People Still Want Something For Free -and- Free Over-the-Air Radio
Is Still A Media Choice That Many of Them Choose To Listen To.
-as- Part Of Their Daily Listening Experience.
- - - Free Over-the-Air Radio Still Remains A Single Payment
Media Choice : That Provides Endless Hours of Free Listening.

for 60 years radio has gone through an ongoing process
of evolutionary change -and- change is good ~ RHF

d'Eduardo,

eSpecially -if- IBOC Digital Hash Trashes the AM/MW Radio Band.

This Failure is not iBquity's or the AM & FM Broadcast Industry :
It is clearly the FAILURE of the FCC to Plan and Manage the
Transition of Analog AM & FM Radio to the IBOC Radio Standard.

IBOC and Digital Radio Broadcasting "Fits" the FM Radio
Band Plan.

IBOC and Digital Radio Broadcasting Does NOT 'Fit' the AM/MW
Radio Band Plan.

=IF= AM/MW Radio Is To Go Digital and Be Successful :
The AM/MW Radio Band Plan Nedds To Be Re-Ordered
With Greater Channel Spacing {25 kHz} -and- Far Fewer
AM/MW Radio Stations.

What Is Required Is - An Expanded FM Radio Band that uses
the old Analog TV Channel 5 & 6 Frequency Range 76~88 Mhz
for the Majority of former AM/MW Radio Stations to Transition
to using IBOC.

Mandates and Requirements by the FCC for all new AM/FM Radios
to be IBOC Compliant and for All New Automobiles to have IBOC
Radios as OEM Standard Equipment.

Plus All AM/FM Radio Stations should be Broadcasting in IBOC
by a Specific Date. Forcing All AM/MW Radio Broadcastors to

Buy into AM/MW Radio IBOC -or- Buy into the Transition to FM
Radio IBOC.

-imho- the death of the am/mw radio band
has 'fcc' written on it's headstone ~ RHF
.

Radio-Mart Does It Again !

Double (2) "Mint" Kenwood R-5000 Receiver
- - - Twice as 'Minty' as any other one out there.

Kenwood R-5000 Receiver *in Perfect MINT Condition*MINT
- - - eBay Auction Item # 250172838363
Yes he used "MINT" twice in the eBay Auction Header.

Not only is it Double (2) "Mint" -but it is- *in Perfect
Condition* :o)

BUT THERE IS AN OOPS !
"Addition::: When testing the receiver this afternoon,
a series of dots appeared, they went away after a
few minutes but I feel that I need to point that out."
- - - Oops it may be Double 'Minty' but will it work {DOA?}

radio-mart - how do he do it ~ RHF

Radio-Mart - Does It Again !

Double (2) "Mint" Kenwood R-5000 Receiver
- - - Twice as 'Minty' as any other one out there.

Kenwood R-5000 Receiver *in Perfect MINT Condition*MINT
- - - eBay Auction Item # 250172838363
Yes he used "MINT" twice in the eBay Auction Header.

Not only is it Double (2) "Mint"
-but it is- *in Perfect Condition* :o)

BUT THERE IS AN OOPS !
"Addition::: When testing the receiver this afternoon,
a series of dots appeared, they went away after a
few minutes but I feel that I need to point that out."
- - - Oops it may be Double 'Minty' but will it work {DOA?}

radio-mart - how do he do it ~ RHF
.

"And it won't be long before the inexpensive portable HD radios start
showing up on the market."

That won't help the sagging HD Radio sales:

"HD Radio and the 'myth' of price"

"We, as an industry, should not assume that lowering the price of HD
radios will remove the primary obstacle to the technology's success.
Not until someone convinces us they know what those primary obstacles
are."

http://www.hear2.com/2006/05/hd_radio_and_th.html

Word has already gotten out about HD Radio and it isn't pretty:

"Is HD Radio Toast?"

"There are serious issues of coverage. Early adopters who bought HD
radios report serious drop-outs, poor coverage, and interference. The
engineers of Ibiquity may argue otherwise and defend the system, but
the industry has a serious PR problem with the very people we need to
get the word out on HD... In New York City, the #1 market in the
country, there are 25 stations broadcasting 42 HD channels. You'll
find CHR, AC, Classic Rock, Hip-Hop, News, Talk, and Sports. In other
words, everything you can find on the regular FM dial... The word has
already gotten out about HD Radio. People who have already bought an
HD Radio are telling others of their experience (mostly bad) and no
amount of marketing will reverse this."

Just as with portable DAB radios in the UK, vaporwear portable HD
radios will have even worse reception and will always be battery-hogs.

"1st the iPod - 2nd the iPhone - 3rd the iEverything !
- - - What's In Your Apple ?"

Here's what's in my Apple:

"A USC Student Consults a Troubled Radio Industry"

" It's great that radio is free but the next generation wants to
control what they hear. She quotes Mark Sovel, Music Director of Indie
103 in Los Angeles: 'The popularity of the iPod is directly related to
the crappiness of radio'.

http://insidemusicmedia.blogspot.com/2007/10/usc-student-consults-troubled-radio.html

Yup, yup, yup, Eduardo! Ha! Ha!

Yup, Sprint and Samsung are deploying it across many major cities - it
is over for terrestrial and HD Radio! Ford's new Sync allows seamless
Internet Radio streamin in-dash - hear for yourselves:

"Radio: Internet Radio or HD Radio. You choose!"

http://gormanmediablog.blogspot.com/2007/10/blog-post.html

No indication of HD Radio in the three Ford dealerships that I visited - no installs of crappy dealer-installed HD radios! Ford has no demos of HD Radio! Ha! Ha! Eduardo!

News/talk/sports are highly-rated on AMs - the music FMs will go under
first.

Not anti-radio, just anti-Eduardo - I listen to WLW (if its not jammed
by WOR), WBBM, and WCBS (for Yankees) every night from Maryland. I
would be wiling to accept the downfall of terrestrial radio, if it
meant the downfall of Eduardo.

LinRADiO ? = Linux + WiNRADiO - Software Defined Radio (SDR)
Alternative

The Application of Linux-based Software to a WiNRADiO Receiver
LinRadio => http://www.linradio.com/

* Linux was created by Linus Torvalds . . .
LinRadio => http://www.linradio.com/

* WiNRADiO 'merges' Radio and Computer Technology . . .
Producing the world's first commercially viable PC-Based
Wide-Band Radio Receivers.
LinRadio => http://www.linradio.com/

* LinRADiO is an initiative of WiNRADiO Communications,
to provide a free forum for Linux users interested in PC-based radio.
LinRadio => http://www.linradio.com/

* Linux Developers with Interest in Radio Communications
are invited to participate in LinRADiO and the development
of this WebSite. - LinRadio => http://www.linradio.com/

LinRADiO is a Trademark of WiNRADiO Communications
© 2006 WiNRADiO Communications

one more thing to consider in the realm of 'software defined
radios' (sdrs) for those who do not like microsoft ~ RHF

"FOLLOW-UP EDISON MEDIA RESEARCH STUDY ON 12-24 RADIO LISTENING SHOWS SHARP DECREASES IN TSL AND USAGE"

"A new study by Edison Media Research shows sharp declines in Time Spent Listening (TSL), Persons Using Radio (PUR) and most importantly attitudes about radio among the 12-to-24-age group, the listeners who represent both terrestrial radio's future and its greatest challenge."

Thanks for the replys.

I knew CFRX was off air for quite a while, just wanted to hear from
the active crowd.

I did break down yesterday and went to www.(yourstationhere) so I got
a fix anyway.

My radios include a Lowe HF150, Icom R75, Magnavox D2999, Grundig
YB400.
I also have a Icom R2 which is kinda fun on 49m. SW from a shirt
pocket and duck antenna.

Thank again
WDX0FXH- Anyone remember these?

The fact that Arbitron gave us the PPM, something radio did not want, should
be pretty good proof that they march to the agency and advertiser's drums,
not radios.

Of course... they still own it, and putting something on it is appropriate.
But, just like KTAR in Phoenix, they substituted a 4 share format that went
to FM for a format that maybe will get a 1 share to 1.5. Later, they can
write the whole assets value off....

Maybe you should resort to bombing AM stations. Seems like that would
get you the results you want, only more quickly.

Yeah, but the listenership they get is probably extremely loyal and
also attractive to demographics.

Indie rock demos are usually 20s-30s no?

Source record: 127347

Just got a used NRD 525 from ebay, connected it up and it is as deaf as a post. Just audio hash on all bands. Even local AM is dead. I also have a Grundig 800 which receives fine on the same antenna, so it's not the aerial. Has anyone any tips? I have turned down the squelch etc etc.
Regards,

"Indie" is the station name, but it is simply a KROQ wannabe with a bit
broader list. It's a 25-39 play, mostly. But it ranks about 30th in the
market.

Not much variety. The only DRM in the Pacific that I know of is
Radio New Zealand.

Wouldn't any shortwave that could decode DRM also pick up regular
broadcasts?

Arbitron is not "frequently" questioned for its quality. There are occasional issues, and Arbitron generally responds rapidly to any such occurrence.

The new PPM is "high tech" using passive detection of stations being heard by a panel of listeners that is proportional on over 20 stratification variables. Even the diary method represents a standard process for monitoring behaviour over time, used in many areas of business.

The principal of a sample projected into the total population under study is a standard for all research. Sample size is determined based on cost vs. the margin of error. The Arbitron samples are based on what the radio industry can afford; there is no way of increasing the sample due to the cost.

Arbitron data is not released "twice a quarter." The PPM data is released weekly, with a fuller report each 28 days, 13 full reports a year and 52 weeklies.

The diary data is released monthly, with 12 annual reports. Each is a rolling average of the prior 12 weeks of data collection from a sample that changes each week. Quarterly, a full report is issued, while the other 8 reports are summary ones.

In a market like LA, the diary report is based on a sample of over 30 thousand diaries per year, a relatively large sample for consumer research. In the PPM, the LA data will be based on about 2000 persons daily, using a panel which is already balanced in all demographic and socioeconomic groups.

In other words, none of what you posted is correct.

Considering that we have a cluster share of 16% of all listening in Los
Angeles in 25-54, and "Indie" has a 0.4%, I don't think we have any need of
their advice.

WIBC, as a station, is going completely off AM. It will be replaced, at its
dial position, by a different station with different call letters and a
different format... and less listening potential.

No, DRM is 100% digital. To run analog simultaneously you need a separate
frequency. Some testing is being done, like that in Mexico, by placing the
DRM signal on the adjacent AM channel... a station on 1060 is going to have
DRM on 1070.

1499. THE PEOPLE ON THIS FORUM ARE LACKING IN MANNERS

You know that stereotype?
The one that says, "Old people are crotchety and grumpy"?
This group verifies that stereotype.

Is this really how you want the younger generation to remember you?
To cheer on the day you die? No? Then maybe you ought to grow a
pair, and stop acting like "grumpy old men" who are difficult to deal
with.

>
> Same difference, retard! A station will remain, retard!

But, and the point in Inside radio, RBR, Tom Taylor Report, etc., is that WIBC is moving. When a station moves its name or calls, intellectual property, talent, etc. elsewhere... whether to a better channel on the same band or to another or even to the internet... the station has moved from the old channel. whatever takes its place on the prior frequency is a new station... to the industry, the owner, to advertisers and to the ratings.

In this case, the ratings will track WIBC, with historical data from the past AM listening and ongoing data from the new FM channel.

The analogy is moving from one house to another. If you move, your residence is the new location; the new residents at the old house do not take on your name and identity. Some folks might keep the old house and rent it out, but the new residents are not their family.

1070 ceases to be WIBC in January. WIBC will be moved, to a new location.
The old location will become a different station.

This looks a bit like the Bell and Howell radio but it says you need 2 D cells (and the B-H uses 2 AA cells) and the AM-FM switch seems to be a slide switch.

You get a free radio with any order from the mailing from which the coupon comes, sign and include the coupon, but I'm sure if you give coupon number 9LC over the phone or on line they'll take it.

Note that this is probably IN LIEU of the free shipping coupon you found with a retailmenot.com search.com.

Ratings are a sales tool, and on this point (regarding appealing to or even appeasing advertisers) you are correct. The idea is to give advertisers something they have high confidence in to sell our product with.

Radio Station WIBC is going off AM and moving to FM. A totally new station
will take its place.

WIBC is moving to FM. A different station will be on 1070. Different format, different talent, different content. Brand new.

The headline says, "WIBC to Make Switch to FM " which means there will be no WIBC on AM. There will be a new station.

Sounds to me like WIBC-AM and WIBC-FM!

Yes, it does. The article says "WIBC to Make Switch to FM " and describes, vaguely as it will not come until January, a new sports talk format for the AM channel. WIBC, with its news talk format will be on FM only.

Here is what Tom Taylor said today: (note the comments on "AM becoming less a draw")

"Another 50-kw AM shares its format with a sister FM, then goes sports - WIBC, Indianapolis.
Those solid-sounding rumors are borne out, as Emmis announces #1, a "93 days of Christmas" stunt for the FM that's been CHR WNOU (93.1). And #2, the impending birth of news/talk WIBC-FM on January 7, 2008. Where does that leave 50-kw WIBC at 1070? Doing sports full-time, building on its current agreements to carry Peyton Manning and the NFL Indianapolis Colts, plus the NBA Indiana Pacers, Indiana University football, plus various racing franchises like the IRL and the Indianapolis Motor Speedway. (Some of that will continue to be shared with sister "Hank FM.") The strategy mirrors what Bonneville did in Phoenix with KTAR - it lifted the news/talk programming (and the KTAR image) from 620 over to the FM dial. Then it created "Sports 620" on the original KTAR frequency. Operators are busy looking for unique local content for their FMs and this is one answer - though long-term, there's the prospect of the AM dial becoming less of a draw. And perhaps worth less as an asset when the lenders get out their pencils. Is anybody thinking about that? Emmis will keep the WNOU CHR format going on HD-2 and on the Internet"

You don't know that, and neither do I. Generally, to avoid confusion in
diaries, each station would have separate calls.

d'Eduardo -IIRC- France is also testing the same Co-Channel
Simulcast process in the Medium Wave Band.

IMHO - The better scheme would be to have a 50 kHz Separation
between the Two Simulcast Signals : This would allow both to be
Broadcast at Full Power and reduce any Co-Channel Interference
between the Two. ~ RHF
.

This could be a very minor, no cost thing to fix.

Make sure it's unplugged.

Take the top off, SLOWLY, don't break the speaker lead! Unplug it, and
set the top off to the side. Look to see if one or more of the boards
has popped out during shipping. This is very common, since the radio is
shipped with a hunk of foam rubber on top of the boards originally, and
is supposed to be removed before you use the radio. Lots of times they
are still there 20 years later. If it was gone, and it probably was, the
boards can easily be popped out by the package bouncing around during
shipping.

Pull each PC board out. You will probably not have the pulling tools
that came with it, so take a couple of small diameter bolts and bend
them so you can hook the holes at the top of the boards.
Pull them straight out and then with your fingers, gently squeeze the
contacts (tracks where the board slides in), and then slide the board
back in. Make sure the board is fully seated. If you have some "deox-
it", you might want to put a small amount on the edges of the boards
where they contact the tracks.

Do this for all the boards, and if you are lucky, it's fixed.

If not, well, you know..

BDK

I have a MSEE, but E&M is not my specialty. However, since aluminum is not a ferous material, I believe the H wave will penetrate it. RF shielding paint is generally nickle for that reason. I don't recall if "mu metal" is ferous or not.

Indianapolis will not have PPM measurement for over two years, so any calls have to resolve the accreditation issues in the diary. Two stations, AM and FM, with the same calls creates accreditation and ascription issues; most of those, like our KGBT and KGBT FM, are heritage calls and cause still, enormous Arbitron issues.

SM - Did you buy it on eBay from Radio-Mart ?

Check the Following Front Panel Controls :
Attenuator Setting
RF Gain Setting
Bandwidth {Filter} Setting

Check the Rear Panel Features :
Antenna Switch Setting
Mute
Transmitter Delay Jumper Missing ?

Apparently on 24h. And for only 1 kW and a non-directional antenna they get out
fairly well.

Speaking of aluminum screen, I previously tried a little experiment.
Just one layer of screen isn't enough, if I make a cylnder of screen,
5-6 layers thick, then place my cell phone inside the signal is lost
completly. 2-3 layers cause loss of a few bars. I'm not sure if it
is a result of blocking the signal or just scrambling it.

Turn your degree in!

Faraday cages, AKA screen rooms, are used to isolated a space from the
outside
world. They use copper mesh, with the junctions welded, and achieve
isolations of
from 80dB up to ~120dB, more dB isolation requiring multiple "walls".
Think nested
Russian dolls.

A RF/EM "wave" consists of both E and H fields. Any conductive case
with completely
conductive seams and walls will stop any RF/EM field.

Take a cookie tin. With unpainted top and bottom join edges.
Put an FM radio inside tuned to the strongest FM local staiton.
As you put the top on the signal will go away.
Works for AM/MW/Cell phones as well.

Over in alt.survival we have several ongoing threads about how to
protect electronics
in a nuclear or solar EMP event.

The better answer would be "why do you think you have dangerous levels
of RF impinging
your home/bedroom?"
And
"What frequencies do you think are present?"

Higher frequencies mean shorter wavelengths, which mean any openings have to become
smaller and minor joint imperfections become more important.

IE A friend has a home recording studio. He lives within a mile of a pretty powerful AM/MW
station. He was getting some interference in spite of serious efforts to filter the RF at the
input to his mixer. At my suggestion he built a screen room of 'chicken wire'. Rat wire
would have been better but the larger wire knocked the signals intensity down enought
so it was not a problem. His room isn't really RF tight, a good radio will still pick up the
stronger local MW stations, they are all very weak. A not perfect screen room but effective
enough for his needs. Cellphones, TVs, FRS HTs and FM radio are fairly uneffected. Rat
wire with it's 1/4" grid would kill everything below microwave, if you could build a good enough
door.

Terry

1556. A "new" technique for measuring differential mode to common conversion.

Newsgroup: rec.radio.shortwave
Date: 2007-10-09 22:56:28 UTC
From: r2000swler@hotmail.com
Message-ID: <1191970588.271723.252200@r29g2000hsg.googlegroups.com>
Source record: 127426

Regulars here may have followed my efforts to deal with noise
generated within
my own home. Along the way I read W1HIS's work on "Common Mode Noise"
and further study revealed differential noise becomes a problem when
it becomes
common mode noise.

W1HIS does a great job of describing how and where to use filters and
ferrite
to reduce noise from the home and to prevent noise from going up the
coax to
enter the antenna.

The exact method of DM conversion to CM has intrigued me. Reducing DM
is
the most useful tool for stopping self generated RFI. But you can't
get rid of all
of the DM noise. So I have been trying to decipher the riddle. I have
gathered a
lot of references and tried to develop a "ressonable" way to explain
the exact
conversion method.

In the process I have made a lot of measurements and wasn't have any
great
success at building a model to deal with this. My method of injecting
SM and
seeing where it becomes CM was useful but left gaps.

There are days I am so dense it amazes me I accomplish anything. A
net
search for another topic and found a article by Jasper Goebloed
entitled
"Reciprocity and EMC measurements".

It is so simple. Inject a Common Mode noise source and follow the
conversion to Differential Mode noise.
<www.ieee.org/organizations/pubs/newsletters/emcs/summer03/jasper.pdf>

This is a very useful tool that avoids the quasi legal use of my 10mW
3.58MHz,
80M ham band, RF source.

Assuming anyone else is trying to tame their self generated RFI is
interested,
this is a very useful method that allows us to inject CM noise, that

does not
radiate a significant amount of RF, IE I can't receive it 20' away
from the
power cable. I am using a home made ferrite toroid

Will will post this and the pdf in his stopRFI page in the near
future.

Terry

I would check the RF gain control first, then the filter selections. I bought a used IC-R-71 from an owner that thought the radio was weak. It turned out that every front panel control was set to a sub optimal position!

** SAINT HELENA. Radio St. Helena is celebrating its special DOUBLE
ANNIVERSARY year 2007 with a very special Radio St. Helena Day 2007
world-wide shortwave broadcast.

The year 2007 marks a DOUBLE ANNIVERSARY for Radio St. Helena :
- - the 40 th anniversary of broadcasting for Radio St. Helena, and
- - the 10 th shortwave transmission anniversary.

Saturday, 15. December 2007

From	To	Target area
1730	1815	New Zealand
1815	1900	India
1900	2015	Japan
2015	2145	Europe
2145	2245	North America East
2245	2330	North America West
2330	0015	South America North
0015	0100	South America Central/South

RSH will be transmitting on 11092.5 KHz in USB with 1000 Watts and
using a 3-element monoband directional antenna.

There will be a VERY SPECIAL and beautiful full-colour QSL card
issued by Radio St. Helena for this special DOUBLE ANNIVERSARY
shortwave transmission.

The same procedures as in 2006 for reception reports, return postage,
and QSLing will apply for this broadcast in 2007.

Watch our web page: http://www.sthelena.se/radioproject for more
information.

With best greetings and wishes for good listening conditions,

Laura Lawrence Station Manager of Radio St. Helena
Robert Kipp Special Assistant to Laura Lawrence
Jamestown, St. Helena / Langen, Germany 08. October 2007
(via Mark Nicholls, Chief Editor, New Zealand DX Times, New Zealand
Radio DX League http://www.radiodx.com/ Oct 10, ripple via DXLD)

So much for http://www.sthelena.se/radioproject/latest.htm which still
has nothing about this as of 2006 UT Oct 9 (gh, DXLD)

A concern I have is that the broadcasters mostly seem to be scaling back shortwave. I'm wondering what's the point if DW, BBC and others are not even available to me (if that eventuates).

My budget is, maybe, $150. I'd like to listen, in good quality ideally, to a range of broadcasters (obviously I guess). Whichever option gives me that, I don't mind. I live in the middle of a big city near power lines, so I don't want to hear just noise (and btw hypothetically then find out that BBC is unattainable where I am).

I know the BBC and others have their flaws, but I'd like to listen to intelligent, intellectually-stimulating stuff. What else is out there, apart from BBC, Radio Netherlands and so on?

By the way, how would I even go about getting started with DRM. The main point, similarly although slightly different, is I don't want to get DRM to find out the range is limited. I should add, I'm really clueless in all this!

Start with some google searches to understand more about DRM rceivers, their availability and cost.

Look for DRM schedules to see how many broadcasts there are.

You should find that DRM receivers are generally also shortwave receivers.

You should be able to find what it takes to turn a shortwave receiver into a DRM capable one.

Here is a link to get you started.

http://www.google.com/search?q=drm+shortwave

[snip]

Not any. Skin depth comes into play so that any Faraday cage is going
to have a lower cut-off frequency below which attenuation falls off.
The size of holes set an upper cut-off frequency above which
attenuation falls off. A Faraday cage, therefore, looks like a band-
stop filter for RF/EM fields - the thicker the walls and the smaller
the holes, the wider the bandwidth..

"A Radio That's Digital But Hardly Special"

"That HD Radio name, for instance, was a weasely move by Ibiquity to
trade on the popularity of high-definition television... HD Radio's
FM signal is not CD quality, though its AM signal may someday approach
today's analog FM. I wouldn't know, because I still can't tune into a
digital AM station locally with an HD Radio."

I would say bandwidth. Large aspect ratio antenna elements have a narrow
band of resonance. It seems to me that there are some companies out
there that have tower kits that run 3 to 4 wires on spreaders so the
electrical diameter of the tower is increased. This will allow the tower
to have lower VSWR over the +/-15KHz required.

Next up I would look at the transmission line to tower coupling. Many AM
broadcast towers are series coupled with the tower isolated from ground.
The tower would tune a little more broadly if it was grounded and shunt
coupled. I believe this is the preferred method in central and south
America.

That is not the purpose of folded dipoles, called unipoles, which is what
you are describing. A unipole requires no base insulator, so in this day of
using towers as a revenue center, it allows other antennae to be mounted on
the tower with no need of isocouplers. The feed is "found" at some point up
the outrigger wires, and the base is at ground potential. The folded dipole
is also appropriate, like a Franklin, when there is a bad ground system,
such as antennas in marshes and salt flats where they corrode, or where
there are structures on the property. A unipois also useful with a shorter
than 1/4 wave tower because the tuning network needed to tune out the
capacitive reactance often narrowbands the antenna (not the tower itself).
So a unipole is mostly used to compensate for bad ground systems and the
need to multitask the tower, not to reduce the noxious effects of a less
than conforming tower, as the FCC requires a very special showing to allow
low antennas.

A broader cross section will broadband the tower a bit, but the difference
in a 24" to 30" cross section and a folded dipole is minimal.

The bandwidth for AM is, by NRSC, 10 kHz in each sideband... actually, a
little less. This is to avoid 10 kHz harmonics with adjacent channels.

In any event, the intent of broader bandwith would be to improve quality by
decreasing the differnces in impedance and reactance at plus or minus 9.99
kHz from carrier. A well tuned ATU, whether high Q or broadbanded, does not
create a significant amount of reflected power. A tower that is mismatched
at carrier does.
>
> Next up I would look at the transmission line to tower coupling. Many AM
> broadcast towers are series coupled with the tower isolated from ground.

The FCC no longer authorizes shunt fed towers. The unipole is the closest
you get to this; one manufacturer, Kintronics, who makes kits to order,
compares them with shunt fed systems. So, except for the unipoles, all US
towers for AM are insulated from ground.

Transmission lines are never couple to the tower (with maybe one or two
exceptions... more later) because so few towers are a perfect impedance

match with the coax and devoid of +j or -j. An antenna coupling unit is placed between the coax and the tower, using a network to match the tower to line impedance and to bring reactance to zero at the carrier. The ATU is typically attached to the tower with a copper strap, copper tubing or sometimes even braid. In any case, it is silver soldered to a connector, which is usually pressure bolted to the output of the ATU and to a leg or the base plate of the tower.

There are a couple of licensed US stations that have towers in the 100 to 110 degree height range and direct couple to a series fed tower without tuning because in that degree range, occasionally a perfect match is already present. This is very rare.

> The tower would tune a little more broadly if it was grounded and shunt
> coupled. I believe this is the preferred method in central and south
> America.

This method was used by a few high power AMs in Latin America in decades past, ones like XEB and XEW. The rest, if they have a tower (many use inverted L's of wire) use series fed towers. Since many towers are diplexed and even triplexed, a rejection network is required and that requires an ATU. Shunt fed towers are generally half wave or similar, and shunt feeding is not and has never been common with quarter wave or less towers.

I have visited every AM in Mexico City, and only 3 had shunt fed towers in 1963... today, I believe only XEW has one. In Colombia, I have visited about 20 50 kw or higher sites, and none was shunt fed. In Ecuador, today and in the past, no station was shunt fed. Of the several hundred stations I visited in Central America, none was shunt fed. The most powerful AM in Argentina, Radio 10 on 710 with 100 kw, with a nice half wave tower, is series fed.

The only other Latin American shunt fed I know about was CB106 Radio Mineria in Santiago. That station, saying AM was no longer viable in Chile, turned in its license and turned off the 100 kw transmitter nearly a decade ago.

FINALLY, THE BLONDE JOKE TO END ALL BLONDE JOKES!

A blonde calls her boyfriend and says, "Please come over here and help me. I have a killer jigsaw puzzle, and I can't figure out how to get it started."

Her boyfriend asks, "What is it supposed to be when it's finished?"

The blonde says, "According to the picture on the box, it's a tiger."

Her boyfriend decides to go over and help with the puzzle. She lets him in and shows him where she has the puzzle spread all over the table.

He studies the pieces for a moment, then looks at the box, then turns to her and says, "First of all, no matter what we do, we're not going to be able to assemble these pieces into anything resembling a tiger." He takes her hand and says, "Second, I want you to relax. Let's have a nice cup of tea, and then....." he sighed, "let's put all these Frosted Flakes back in the box."

Thanks, there are days I feel like a lone voice in the woods.

My wife jokingly calls me a "former SWL who is now a RF noise
listener."

For my situation, my home is about as RF quiet as I can reasonably
achieve.
I am long past the point of diminishing returns.

But I am learning what works and what doesn't work, and what works
"best".

"Best" being defined as best RFI reduction for the dollar and effort.

Knowing what I now know I would have avoided some of the more extreme
efforts, such as installing X class caps across the backs of AC
outlets and
light switches. I think I am starting to reduce this to more of a
science then
art.

You may want to check out Wills Yahoo stopRFI group.

It isn't a normal group and should be migrating to a "real" dedicated
web
page.

The logical, sane, steps would be to find the noisiest RFI sources in your home
by using a battery powered receiver with a small sensitive loop. W1HIS's B-field
sniffer is great, as is my el cheapo 19uH pill bottle. Check every thing in your home.
Don't forget door bells and smoke detectors. Then concentrate on those devices
and see how much that helps. I have found the Curtis EMI filters that have been
mentioned before to be an excellent value. Another simple step is follow W1HIS's
suggestion to buy some cheap male AC plugs. Install 0.01uF Panasonic X class
capacitors in them and scatter them through your home. This shouldn't cost more
then $50 or so and only a weekend or so and will give a great reduction in the RFI
your own home produces.

My wife has suggested that I should join some of my kin and become Amish.
No AC mains issues there. Of course their view of technology places my hobby
as a big no no.

I am working on a multi part article that will address what I think to be the most
important aspects of RFI mitigation.Given that I either I have to type with one hand
or fight with Dragon Speak and Type.

And ASCII simply sucks for writing formulas sub and super scripts. Equations are
fun.

Terry

John Batchelor Returns to WABC

WABC radio in New York announced today that the John Batchelor Show will return on Sunday evenings from 7pm - 10pm (ET) replacing the Brian Whitman show.

http://www.wabcradio.com/Article.asp?id=489092&spid=

UPDATE: John Batchelor will actually be on for six consecutive hours over two internet streams: WABC in New York's stream from 7pm-10pm Eastern and then KFI's stream in L.A. from 10 p.m. to 1 a.m. Eastern.

John Loftus (12:05 a.m. Eastern) and Aaron Klein (11:50 p.m. Eastern) will both be on the L.A. show. John Anderson (9 p.m. Eastern) will be on the New York show. Check back here later [link below] for more info if it becomes available

http://www.loftusreport.com/2007/10/05/the-return-of-john-batchelor-to-the-wabc-lineup/

John Batchelor also appears on the Loftus Report, Monday, Tuesday and Wednesday, 11PM - Midnight Eastern Time: www.loftusreport.com

I've been in on installing one of those kits.. lot of fun when you have the
backup tower for the station only a few dozens of yards away.. you don't
want to forget to connect that ground in at least two places on the way down
the tower.. :)

The elderly parasite who posts under the name of "Burr" bragged:

"VA Physical, once a year!!!
Free Meds for the year. $5,000, trip cost $1,217 and I know how good
of
shape I'm in. I'm 65"
Burr

Free? To you but not to hard working Americans who can barely make ends meet nowadays. I don't know what is more offensive; taxpayers being forced to pay for you for the rest of your worthless life or your incredible hypocrisy (considering you are a self proclaimed fervent CONservative Republican).

This same asshole bitches about high taxes and votes against single moms trying to get health care for their children. All while you receive "free" government health care, social security, a military pension and who knows what else.

Can you image the outcry if a black mother boasted of flying to San Francisco or wherever to receive $5000 of government handouts for "free"?

What a hypocritical parasite.

I wasn't going after the commercial reasons but methods of causing
existing towers not to be so narrowband resonant. You will find using a
shunt feed method will cause the tower to be dampened compared to a
series feed method. With a shunt feed the resonant peak will be a little
lower and broader than with a series method.

> The feed is "found" at some point up the outrigger wires, and the
> base is at ground potential.

Yes.

> The folded dipole is also appropriate, like a Franklin, when there is
> a bad ground system, such as antennas in marshes and salt flats where
> they corrode, or where there are structures on the property.

Yeah. That's why I thought it would be more popular in central and south
America where expensive or difficult to install, due to terrain,
grounding systems requirements could be reduced.

> A unipois also useful with a shorter than 1/4 wave tower because the
> tuning network needed to tune out the capacitive reactance often
> narrowbands the antenna (not the tower itself).

That my point. The shunt type coupling is more broadband.

> So a unipole is mostly used to compensate for bad ground systems and
> the need to multitask the tower, not to reduce the noxious effects of

I don't know what you mean by "the FCC requires a very special showing
to allow low antennas" but I wasn't after the shorter tower aspect.

> A broader cross section will broadband the tower a bit, but the difference
> in a 24" to 30" cross section and a folded dipole is minimal.

That's not my understanding.

> The bandwidth for AM is, by NRSC, 10 kHz in each sideband... actually, a
> little less. This is to avoid 10 kHz harmonics with adjacent channels.

You usually make measurements beyond spec to show the trend over the
entire specification. Here the spec is VSWR.

> In any event, the intent of broader bandwith would be to improve quality by
> decreasing the differnces in impedance and reactance at plus or minus 9.99
> kHz from carrier.

Here that results in a lower VSWR over the IBOC operating bandwidth
using a shunt fed tower.

> A well tuned ATU, whether high Q or broadbanded, does not create a
> significant amount of reflected power. A tower that is mismatched at
> carrier does.

Yes that is my point. The tower itself will have a narrow resonant
bandwidth so a method is needed for the tower to not present a high VSWR
+/- 15 KHz around the carrier frequency.

ATU's that couple the coax transmission line to the tower using a series
connection to an insulated tower have a stronger tendency to be
narrowband in and of themselves. An ATU designed to couple the coax
transmission line to a shunt fed tower tends to tune a little less
sharply and the useful resonance range is broader.

> > Next up I would look at the transmission line to tower coupling. Many AM
> > broadcast towers are series coupled with the tower isolated from ground.
>
> The FCC no longer authorizes shunt fed towers.

Why?

> The unipole is the closest you get to this; one manufacturer,
> Kintronics, who makes kits to order, compares them with shunt fed
> systems. So, except for the unipoles, all US towers for AM are
> insulated from ground.

I don't understand why the FCC would care how transmission lines are
coupled to the tower or tuned / matched by an ATU.

> Transmission lines are never couple to the tower (with maybe one or two
> exceptions... more later) because so few towers are a perfect impedance
> match with the coax and devoid of +j or -j. An antenna coupling unit is

> sometimes even braid. In any case, it is silver soldered to a connector,
> which is usually pressure bolted to the output of the ATU and to a leg or
> the base plate of the tower.

That's all interesting information but we are mixing and matching terminology. The ATU doesn't just tune the tower to resonance it is also a part of circuitry that couples the transmission line to the tower.

Reactance is near zero at resonance and the antenna looks like a resistive load to the transmission line. The resistive load value also needs to match the line impedance so there is little or no reflective power. This is one reason why transmitters are getting damaged when IBOC is turned on. The reflective power goes up over the increased power bandwidth IBOC requires.

Several things happen when the reflected power goes up. Mainly the power does not go into the antenna to be radiated and instead heats the transmission line and transmitter finals. Another bad effect is the reflected power can make the transmitter unstable and generate spurious energy.

> There are a couple of licensed US stations that have towers in the 100 to
> 110 degree height range and direct couple to a series fed tower without

Why would the terrain considerations, grounding requirements and such be any
different than in, say, Idaho or Wisconsin or Arizona or Alabama?

And why would it be more expensive to do in Central and South America? I can
see no logic in any of this set of statements.

>

Only for very short towers where a high capacitive reactance is found.
Otherwise, the bandwidth is much more the effect of the Q of the ATU and the
trandsmitter itself.

That is the only place where the unipole offers a distinct bandwidth
advantage. It also gets a better field strength at 1 km than a short series
fed tower. But the main reason anyone uses them is either due to a bad
ground or the need to put other antennas on the tower.
>
>> A broader cross section will broadband the tower a bit, but the

Go back to Carl Smith's AM antenna and DA handbooks, Unless you find a nice old Blaw Knox with a 24 foot center cross section, there is not much gain except cost, maintenance, etc., in adding outriggers insofar as broadbanding.
>

A well tuned tower of 1/4 wave has less than 1.08 to 1 vizwar. And, except for test situations, a tower measurement is usually done at -10, licenced frequency and +10 kHz. This is what is often asked for by outside fabricators of ATUs.

A mismatch is generally considered to be a mismatch of impedance output of the ATU with the tower itself at the fundamental. Since the audio is brick-walled right under 10 kHz, there should be little or no excursions beyond +/- 10 kHz.
>
> ATU's that couple the coax transmission line to the tower using a series
> connection to an insulated tower have a stronger tendency to be
> narrowband in and of themselves.

Not for the last 40 years or so. High Q was much more common pre-60's when AMs mostly ran network showsthat came over 5 kHz lines from very far away. When music took over AM, stations wanted better bandwidth.

> An ATU designed to couple the coax
> transmission line to a shunt fed tower tends to tune a little less
> sharply and the useful resonance range is broader.

Since true shunts are no longer licensed, this point is moot. Most US AMs, for economy, zoning, FAA, etc. use quarter wave series fed towers. Since a huge percentage are directional, there are very, very few Unipole directionals, so in that area series fed is the only way to go.

>> The FCC no longer authorizes shunt fed towers.
>
> Why?

I don't know. This has been the case for many decades. I suspect part has to do with the slight directionality the shunt itself introduces, and the fact that shunts would be very difficult to do with directional stations for this reason.
>
>> The unipole is the closest you get to this; one manufacturer,

There is a lot about AM radio in the US you don't understand. The fact is, shunt fed towers are very seldom used. I suspect that the fact that they are not particulary easy to tune on short, 1/2 wave towers may be part of it, but there must be more.
>

An ATU is not necessary if the tower is 52 ohms and not reactive, found around about 100 to 110 degrees in electrical height.

The ATU is a matching circuit, to make the coax "see" 52 ohms (or some other impedance) when, in fact, the tower is not of that impedance. In some senses, a top hat or top loading does the same thing... it makes the tower change the apparent electrical height. You are trying to complicate something that is relatively simple... cancelling the reactance and matching impedance.

>

That is not why the very few cases of transmitter damage have occured. Most transmitters will simply shut down over reactive or mismatched loads. The

issues reported (and one that took out 80% of the power modules at KTNQ) had to do with the control interface of the HD exciter and the analog transmitter.... a design defect in non-rf and non-af circuitry.

Or, in today's transmitters, it does neither. It detects VSWR and shuts off.
.

Yes, I have worked in every nation in Latin America save Cuba and Nicaragua, and visited stations in each one. There are pictures of dozens and dozens stations I took, including some shunt fed ones, on my web page, from trips I made visiting stations.

The fact is you have said that shunt feeding is common in Latin America where it is highly uncommon and always has been. You made statements about costs, land and towers in Latin America that make it sound like you think we are talking about another planet, not the same Hemisphere. In fact, the conditions and terrain in South Florida are more difficult and hostile than

in most places in Latin America.

Like I said E&M isn't my thing; rather I know analog IC design.
Somehow managed to pass two classes in E&M, and even knew how to do
Smitch charts.

I'm not quite convinced that aluminum shielding is all you need. Good
audio transformers use mu-metal shields. I thought the Faraday shield
only blocks the E, not H. Doing some googling, this website agrees
with me:
http://www.williamson-labs.com/480_shi.htm

This is the nickle spray I use for shielding:
http://www.mgchemicals.com/products/841.html
There is a chart of non-ferous and ferous shielding, with the ferous
shield being 20db better at times.

Burr (and millions of others) have earned their "benefits" by paying those taxes you bitch about all their lives, and by serving their country, some for more than 20 years. Perhaps you want to take away everything that generations previous to yours have earned or payed into the system so they could have a life after they had finished working. And lest we forget, you, too, will get older, and need the same system you are griping about now.

Not exactly. The listeners only get to choose from among the songs appearing on a master list which is compiled by someone in the industry. If a particular song isn't on that list, the listeners obviously can't choose it for a station's playlist. So the question is, who is the mystery person that compiles the master list of songs? That person holds the power of deciding what songs can be chosen by the listeners for the station playlist.

Yo Little Dude,

Yup, I got it made, the life of Riley. I can sleep as late as I want or even stay in bed all day if I like. I spend 2 hours a day three days a week in the gym, 2 hours a day three days a week cycling.

I have two vans, a 4x4 pickup (with noisy tires). Three nice bicycles, two wonderful "purebred" dogs and a wonderful wife. We live in a nice three-bedroom house with lots of fruit tree; we eat lots of fresh vegetables, chickens and fish.

When I did work I was one of those bad capitalist, I owned my own business, only worked half a day (12 hours) owned, drove and raced 5 Porsches, owned two houses one a Frank Lloyd Wright style house. I took vacations to anyplace in the world that I wanted to go at anytime. I also did three years, six months, five days and 3 hours in the service and enjoyed every bit of it.

I had six wonderful children, I was a single parent 20 years and we had a great time. My children have "PhD's" to a GED, they have nice lives and I'm proud of them.

Now, how about your wonderful life, now you doing, how's the family? What kind of work are you into? Tell me about yourself, I'm interested!

Have a nice day and let me hear from you, I know the group is interested also.

Burr

PS: Be sure to tell us about your service time!

- Aluminium Siding -and- Aluminium Screened Windows

Follow-up Comment :
These are a beginning and most likely the lowest cost
first step. Plus they are the least intrusive and when
viewed from the exterior will not look like urban blight.

M...Sushi suggests
"This is the nickle spray I use for shielding:
http://www.mgchemicals.com/products/841.html
There is a chart of non-ferous and ferous shielding, with the ferous
shield being 20db better at times."

CAUTION - Before using it on Interior Walls in Living Spaces
be sure to consult the MSDS Information for the Product and
the contact the Manufacture as to it's Safe Uses.

"Imus' Stock Is Higher Than Citadels"

Take Citadel. Its stock closed at $4.38 a share yesterday. It was in
the $10 range a year ago. $14 two years ago. $24 five years ago."

http://insidemusicmedia.blogspot.com/2007/10/imus-stock-is-higher-than-citadels.html

"Clear Channel Interrupted"

"Back when Clear Channel stock was selling in the $90 range,
executives predicted it would be a $100 stock. That never happened. In
fact, the bottom eventually fell out. Under the deal approved
yesterday, Clear Channel shareholders were to get only $39.20 in cash
per share and current shareholders could get as much as 30% of the new
company."

http://insidemusicmedia.blogspot.com/2007/09/clear-channel-interrupted.html

"Emmis stock is out of favor, but is future really so bleak?"

"Certainly, these are not the best of times for the Indianapolis
company, which owns 25 U.S. radio stations, as well as 16 TV stations,
Indianapolis Monthly and other magazines. Its stock was trading last
week at $19, virtually unchanged for the year but far below its
December 1999 high of $62."

http://goliath.ecnext.com/coms2/gi_0199-4118113/Emmis-stock-is-out-of.html

"Univision gains don't help stock - Univision Communications Inc"

"Even with that momentum, Univision stock, which closed at $28.40 on
May 20, is down 30 percent from $40.45 a year ago and had dropped more
than 10 percent since the beginning of the month."

"HD Radio vs. Internet Radio - Which is Radio's Future?"

"Of those who were "Very or Somewhat Interested" in owning HD radio,
3% were "very interested". However, with these respondents, we
followed up with the question "Would you buy an HD radio in the next
two months?" only 1.0% responded "yes". Asked if they ever visited a
retail store to look at or try an HD radio receiver, 30 members of our
sample of 3179 said they had. That is less than 1%."

"Quality v. Quantity"

"When radio listeners ask for quality programming, the decision makers hear quantity programming; hence, HD Radio and its smorgasbord of insipid formats. When listeners, weary of pitiable audio processing and pitch escalation on their terrestrial stations, ask for quality audio - they hear quantity audio and they struggle to cram in more HD side channels of auditory mediocrity."

http://gormanmediablog.blogspot.com/2007/10/quality-v-quantity.html

HD Radio is a virtual sewer of formats.

Very well stated!

When I was a kid we had 3 TV stations to watch and there was always
something on that we enjoyed. Now we have cable and satellite boasting
eighty channels and we spin the remote control like a roulette wheel before
just turning the damn thing off.

I think that is what radio is experiencing.

And sorry, digital fans, your digital audio sucks.

VA Benefits are no different than the retirement benefits a union negotiates
or that a company might give. And they are earned at greater risk and with
greater dedication, too. Why should autoworkers have pensions and not the
military service?
>
> This same asshole bitches about high taxes and votes against single
> moms trying to get health care for their children. All while you
> receive "free" government health care, social security, a military

Social security is not "free." Nor is Medicaid. While we work, us employees
and our employers put in money, about $16,000 on the first $100 k of
earnings at the max, that goes in as an entitlement... it comes back out
when we are retired. And we pay Medicare percedntages on everything we earn.
We have a right to get it back. Social Security is not intended to finance
anything else but retirement and disability.
>
> Can you image the outcry if a black mother boasted of flying to San
> Francisco or wherever to receive $5000 of government handouts for
> "free"?

Most of what you are bitching about are entitlements. Had you worked 30
years for General Dynamics building submarines, would you like your
retirement pension money spent, instead, on the training of the crew for the
new subs that are built?

Not all RFI problems can be solved with diplomacy or simple filters.

I had a "local" CBer/freebander. His 27MHz signal had spurs well
down into the lower HF. Since the FCC is only interested in selling
RF spectrum, and the local police were unable or unwilling to
intervene
I needed to take some drastic action. A couple of calls suggesting
his
involvement with the meth trade resulted in him losing his interest in
CB.

Hint: a 5lb Freon container full of anhydrous ammonia, a half gallon
of acetone, a bunch of lithium batteries and 100 packs of "pseudo
ephedrine" left discreetly under a bush next to his home gave him
a whole new set of communication issues to ponder. The fact he
had some meth on him didn't help his claims of a frame up.

Noisy street lights can be quieted by the careful application of
a CO2 driven BB. The ones protected by a Lexan globe require
a .22.

Noisy transformers and insulators require a more powerful technique.
I often find a suppressed .223 does wonders. But every now and then
I come across a really tough transformer that requires a more
substantial
bullet, for these I have found a .308 does the trick.

Noisy substations require a more drastic option. It simple takes too
long
to silence every RFI source so a more drastic solution is needed.
Several
Molotov's properly deployed general work nicely.

Leaky CATV systems may require drastic action as in cutting down their
poles or climbing up and using a winch to pull a large section of
their coax.

Sadly not all RFI solutions have nice technical fixes.

The Bastard SWL From Hell

The idea was stolen from the BOFH series. Simon was a great
instructor.
All of the above incidents were fantasies inspired by the stress of
trying to
solve some really tough RFI problems with people who, at best, could
be

described as clueless.

< www.theregister.co.uk/odds/bofh>

The only truth was the CBer was busted for meth use and "possession with intent to sale".

And I had nothing to do with his bust.

Really, I mean it, I don't know who tipped the police......

Terry

Thanks for the advice guys, you were right BDK - it was a case of two of the
PCBs being loose on the mother board! It's OK now :-)

Thanks so much for the heads up Ace.
I must admit catching them now on their directional antenna is a lot
harder than when they used the old omnidirectional one.

Still have my QSL card from catching them on 1548 MW.

How do you know such technical stuff - you are only a high-school
dropout, so you must have crib sheets for all of your answers, or look
it up on the Web before you post.

It's been quite apparent you have a grudge against older people.

Fair enough.

But, please, tell us how you are going to keep from getting old; and if by some strange quirk, you do manage to get old, then what? Will you hate yourself?

Ready Your Weapons! Off Shoot Now! Keep Firing Till Ordered Otherwise! Updated: 10-02-07 Rev.g 22:47 PDT

The Dhourties' Fortresses For Killing 'Dualdigers' Off

Recently, on August 5, 2007, at 19:50, I was arrested for 'lewd conduct' bkg. code 5131, (later struck through, and changed to), bkg. code D169, Charge ORD/NRS# 12.32.020 (CCO) 0200- with the 0200- appended, Sector Beat S1, that's the best I can make of the copy I have, a photo copy of one of the original copies. CCDC OR 369/365/A, with '369' struck through. I.D.#087884, struck through, and changed to, 2647396. Event#070805-2517. In the side column of the Temporary Custody Order, it has in hand print, '1-N RT(1) nonit'. Time Stamp at BOOKING 07 AUG -5 23 27. DSD RECORD SECTION.

When I left, I was given a sheet of paper, a 'sign off by offender' sheet, with this information on it:

08/06/2007 02:36 I4732H, OIRPTRAN 6.04.4.1, Name: Ayres, John ID#0002647395, Admit Date: 08/05/2007

Date: 08/06-2007 Officer: 1544 14732H

This was for regaining my property from the inmates properties room.

I was arrested at Tropicana and Decature, on Decature, next to the area where I have my 'Gurkian Way Ministry' sign up on a large, 7 feet by 3.5 feet, 3/4 inch piece of plywood, and where I have another sign, that clearly states on the same size piece of plywood, 'GOD's Place, John Francis Ayres, And Children', where I was doing my 'Tai Chi' aerobic excercise karma erasal religious ceremony, with no clothes on.

I explained to the arresting officers, that I am duty bound by my religion, to do my religious karma erasal religious ceremonies, as well as all my religious ceremonies, naked. I explained that I am GOD, and that I am starting my own, or rather, my newest religion.

The arresting officers had many complaints from the 'assasins' group of 'hired killers', and torturers, who live in the underground, below and surrounding, the Home Depot, next to the New Orleans Hotel and Casino. Their underground complex is in part, under the New Orleans Hotel and Casino, as well.

They apparently, call the police, every time I come to my 'Gurkian Way Ministry's' office site, where I do my Tai Chi aerobic excercise, religious prayer activities.

I had been visited twice, once as noted, previously, and once by a second team of police officers, who told me to just stay in the area, where I had been sitting, and doing my Tai Chi aerobic excercise religious prayer activities, and the officers told me to not wander out naked, into the area surrounding my area, as, it was explained, that passer's by will get "offended" by my nakedity or 'nudeness' in public.

I try to figure, how can some one get offended by looking at a naked man? It's a mystery to me. Anyway, it does seem to be the case, that people can feel uncomfortable, if some one is naked, possibly, and that person would not like to approach the person, who is naked.

Well, if that is what is meant by 'offended', I don't know, but it does seem to pose a problem, for people who may feel embarrased by standing close to or talking to, some one who is naked.

What is a Dhourtie? It is a slang term the Lesbianists use for a 'warlock'. The Orson Well's movie, 'Time Machine' portrays ugly, long, greyish white haired, mutant people, who can see in the dark, fairly well, who serve the people on the surface of the planet, with apples, and pears, that the 'warlocks' apparently pick and place out at night to feed to the peaceful people.

The warlocks, then eat the people who live on the surface of the planet once they lure them down into the underground labrynth of underground caves, and tunnels. A 'dhourty' is a Lesbianists' slang term for a 'mutant', or 'warlock'. The peaceful people, who live on the planet, as shown in the movie, are termed, 'Dualdigers', by the Lesbianists. 'Dualdigers' is a slang term for the peaceful, but apparently lazy, sexually attractive, people who live on the surface of the planet.

Some one also makes their clothes for them, as portrayed in the movie, anyway, as the peaceful people, the 'dualdigers', were all clothed, and had neatly groomed hair. They also apparently, regularly, brushed their teeth, and no one got cavities, except for a now and then, unlucky person, perhaps.

The people on the surface of the planet, apparently do not know how to fight, and apparently, never have any thing to do with violence, except for a now and then, quarrel.

Well, regardless of the movie, and its fictitious portrayal of human life, as I don't know any one who acts like those people who are living together, and loving together with each other, so peacefully, the movie is where the terms for 'dhourty' and 'dualdiger' get their start, in slang language, I suppose.

A dualdiger, I explained, before, in my early notes, as an animal, who is a potent, I believe I said it was, who is part plant, and part animal. It is a peculiar looking animal, and it is a silly looking animal. I think the term, 'dualdiger' comes from this animal.

'Dhourty', probably originated, similarly, that is, it is a name for a strange looking animal, a potent, or another of the many types of animals, that are too tiny for us to see, who live in the 'sub molecular' zones, as I was talking about them, before.

Remember, I said there were approximately 600 million zones in the 'molecular levels', or the levels above what we would think is the area where we might be able to find, molecules. There is a cut off point, and below that level, in the lowest of 'molecular zones' there are sub molecular zones.

The zones are living zones, or cosms, as I explained. They are habitats for living organizms. Below that level, the molecular level, cut off level, there are 900 billion zones, or cosms, as I recall I may have said, in the sub-molecular zones, before you get to the bottom.

At the bottom, there may still be smaller animals, living below that level, and I believe there may be, but am not too sure, and I don't know for sure, but if there are animals, living below that zone level at the bottom, they are not as multipously populated, or numerously with such a large number, and large multiple of different types of animals, and they are not that densely populated zones or cosms, living habitats, as the ones above them.

It must be hard for animals to find food, down there, in those such areas, below the bottom. It would appear to us, as the artic, or antarctic, where conditions are difficult, and few things live there, or so it would seem, from what we are shown on television, by the dhourties, the Lesbianists, on this planet.

I don't know what the real story is, below the bottom level zone, but we'll find out, in time, as we begin to study, in the 'Managing My

Universe' program. Now that I mentioned, it, I think there are lots of animals, living in very tiny zones, way down there, but at what levels, those animals are living, I'm not sure. There are many abominated human beings, living in the lower zones, along with the animals in those zones, so just how small people get, and what kinds of animal people they have become, we'll find out more about, once you begin studying in the 'Managing My Universe' program.

The Dhourties And Their Control Of Dualdigers, In Fortresses For Killing Off Dualdigers

The dhourties apparently control society, and they control the County lockup facility, as when I was there, in a 'Dhourtie Fortress' for killing off dualdigers, dhourties were in large numbers, busily beating up inmates, being rude to inmates, torturing them, forcing them to live in cells on cold, hard floors, with no blankets, and with forced ventilation air conditioning, which is very cold.

The air is toxic, and is filled with fumes animals, of all kinds, but primarily, from two sources, as far as I can figure, the one source, being, air coolant fumes. The other source, industrial cleaners fluids. Both are vaporous, and contain high levels of toxic animals. There are also, at the county lockup facility, large numbers of 'asbestos' animals, in the air, that the prison visitors, are forced to breath.

I was nearly choking, on the asbestos animals, by the time I left the facility, at around 8:30 a.m. I was arrested, the night before, and was transported by van, which was picking up other, soon to be visitors, to the facility, for a number of hours, before I arrived at the Clark County Detention Center, the lock up facility for booking 'visitors', after 11 oclock, that evening, I suppose.

It seems there are facilities underground, below the detention facility, where there are tunnels, and 'caves' laboratories, that they house prisoners in, who are then, cruely, and miserably, tortured, eaten, and killed by the dhourties, who run the facilities, and who run the government, and who run our planet.

Even below normal businesses, such as SONY, or Admiral, or Westinghouse, or General Electric, and below the military bases, of course, as well, similarly to the situation below the county lockup facility, and below the New Orleans Hotel and Casino, and below the Home Depot, there are facilities the 'dhourties' have built, to hide and house people, ordinary people, who have been abducted, and who are being tortured, abused, humiliated, criminally assaulted, eaten, and killed by the dhourties, every day, around the world.

There is no country that does not have these facilities, and all government facilities, and all prisons, and all county and city lockup facilities, and all military bases, and all college campuses, and all large public and private schools, have these facilties. There are also

these facilities under civilian housing areas, such as under large housing complexes, where the governments have constructed low income housing for low income wage earners, or ordinary people, the dualdigiers.

This is pretty much the case, nationwide, and world wide, and you will not find a country in the world, with out this set up, constructed by the 'dhourties' who run the governments, and who run, every aspect of society, including, dictating how we piss, and on what kinds of comodes we sit, shit, and piss into.

We are driven and managed by the dhourties, daily, and they are every where. You will not recognize them, as they look like normal people. They are not mutants, not in appearance, any way. They do have brain deficiencies, however, and they are not clever enough to beat me, GOD. Their brain deficiencies, are of the organic kind, and that means, down in the wiring, they have problems, and their brains do not work for them, any more, in lots of ways. They may seem normal, on the surface, but they are far from normal, down in the wiring, as lots of it has short circuited, and there are many blown fuses. They are not capable of knowing what 'common' sense is, these people with brain deficiencies. They can fake it, but in side, when they have a question, as to what they should do, they can not answer it, without the assistance of their code books.

They have numerous codes, and code books, and these are there, to help them manage to survive, and thrive, in the real world, that they created for them selves, and for the dualdigers, to live in.

I have no intention of returning to the Clark County Court House, for my trial, in Justice Court, on Sept. 5, 2007, in less than thirty days, at 7:45 a.m. I have no intention of playing their game of who takes control of whom, as I will not stand for their intolerable system, their societal system, that they have established for the dualdigers to follow.

I didn't mind going into their buildings, before I learned that their buildings are death traps. I am not going to show up for my court trial and play their game of 'footsies', just, as if I can help it, I will never pay taxes to this or any other dhourty government, run by the dhourties, and that is all of the governments, on this planet.

Yes, I have to pay minor taxes, on food and liqour expenses, and on clothing expenses, and so forth. That is taken from me, without any one asking me, if I would like to pay it or not, and I have no choice, but to pay it, or I will not recieve the item, or items, I wish to purchase.

I am not going to stop my naked dancing, that is, my Tai Chi aerobic excercise, religious prayer activities, if I can help it.

I don't think any one is embarrased by being close to a stripper, in a night club, or to a can-can dancer, with little to no clothes on, in

the casinos, that line the strip, here in Las Vegas.

I don't think the ladies, feel embarrased, when they go to the male stripper clubs here in Las Vegas, where the ladies, of all ages, whoop and holler, get all powered up, sexually, and call out at the male stripper dancers to 'Show me more!', etc.

Isn't it peculiar, that the dhourties who live in the drainage system, next to where my camp site is located, in the underground tunnels, systems, complain to the police about my being in 'their' park, and 'dancing' nakedly, and 'jerking off', that is, religiously expelling sacred and holy fluids, as I've expalined about, as well, and acting in a 'bizarre' manner.

Well, I don't think they are being truthful, as they are all dhourties, most of the people calling in, and the dhourties want me off their property, so that they can go on, killing unsuspecting tourists, travelers, down and out people, who may camp out in the park, or who they lure to the park, after making a casual friendship with them.

I will not stand for this, intolerable arrangement in our society, and no one should. The whole area of Downtown Las Vegas, should be leveled, and blown out to expose a wide, gaping hole in the ground, and every facilty of theirs underground, should be destroyed, and turned into dust, rubble, and dirt particles, in the explosion(s).

The underground casino areas, including the New Orleans Hotel and Casino, and all of the other, dhourtie hotel and casino establishments, and their facilities, below them, should also be blasted and each one left as a large gaping hole, using the explosivies formulas, that I have provided on my bulletin board.

I would like to see every single one of the dhourties expelled from this planet, and blown to bits, leaving nothing but traces of their brain wiring, and bits and pieces of their bodies, behind. However, that is impractical, as I will not have any children, among the dhourties, left, on this planet, to practice my religion, after they are introduced to it. It is a religion that will be here forever, and I need people to practice it. I can not go around killing every single shit head kid of mine, and expect to get any where, religiously, after I have killed them all.

Though they may be shit heads, and though their brain wireing, is faulty, and not workable, for them, much of the wiring, any way, and though my 'ordinary' kids, may not be too much better, in terms, of being a human being, I can not go around killing my kids, just because I do not like them, and I do not approve of their behavior.

We will have a justice system, of my own, when we get my children, who have the technologies, to build my criminal justice system, according to Gurkian Law.

I have had enough of their bullshit criminal justice system, that they instituted, and as soon as I can get my religious prayers said, as I do my Tai Chi aerobic excercise religous prayers activities, in the park, from week to week, from month to month, and from year to year, I will get my kids to build my criminal justice system, and I will be seeing the shit head kids of mine, placed into prison cells, and then corrected, before allowing them to be released. That goes for all of the dhourties, and for all of the dualdigers kids of mine, who do not act, properly, and who do not act peaceably.

We have a lot to learn, about my universe, and about the people who are living in my universe. I will have all of them, practicing my religion, in time. There will be no if's, and's, or but's about it, as I am going to make all my children, work for me, whether they like it, or not. I have a long time to get my program, up and running, and these things do not take place, over night. It's one planet, at a time, and in some cases, there are lots of people, interested, in my religion, already, and they are responding, variously, the ones who have the technologies, to be able to look in, and see, from time to time, what all is happening, here on this planet, with me and my religious efforts.

IS THAT CLEAR! I HOPE It IS CLEAR, SAILOR!

Molding Up Bread

Ask your friendly, neighborhood dhourty, who will cooperate with you, for more information, as to how to mold up spices, and flowers, etc., and for information on molds, in general, and so forth, as they know all the secrets, and tricks, to molding up every thing possible, successfully, as they were trained in the molding sciences, and they are all, certified moldists, who can teach you every thing you wish to know about molding sciences, and every thing else you need to know, to feed the organ animals, in your body, for you to regroverate your body, successfully, and for you to get well, from all the illnesses, that the dhourties, have helped you to get sick from. Show them the same kindness they show you, and be kind to them, as you invite them into your underground lairs, where you will be having them stay with you, as sexaling guests, and as teachers, to teach you about the molding sciences, and other sciences, you need to learn about.

Living Forever On Molds, Foods For Feeding Molds Animals, And Sexaling Juices

See my bulletin board, for more information on 'living forever' by eating molds and the foods they eat, to feed your organ animals, the foods they need to feed on, to be healthy, and to allow you to live forever. In addition, you need the male and female sexaling juices in your daily diet, as I've explained, on my bulletin board, which will allow you to get the spare parts, or baby organ animals, and other animals of all kinds, that you need to replace old and worn out, organ animals, etc., in your body with to allow you to live, forever. There is more to this science of regroveration, then I have recalled, so

far, obviously, as this is a complicated science, that involves many things. As I remember this stuff, I will let you know what we've missed. My amnesiatic conditon is not helping me to recall every thing I need to recall, all at once. Find your self a cooperating dhourty, and get their cooperation, and you'll learn more quickly, and accurately. They also have pledged to teach you, all the molding sciences, and so far, they have not been fair, and they have held back this knowledge from you, so you deserve a break, and they must teach you, or they will do jail time, in my prisons, after my kids build them for me.

Clark County Detention Center

It is an odd thing, when they ask you your sex, and if you happen to be a girl, with a dick attached to your body, they call you a 'mixed genitals' person, rather than a 'male', or a 'female'. They do not check to see if male's have vaginas or not, and so only women, get listed as 'mixed genitals' persons. This is very peculiar. I was told to sit on the 'male' side of the room, where only males sit, in the booking intake area. There was a female sitting next to me, and she apparently had a dick, and so they listed her as a 'mixed genitals' person, or a 'GM' for 'genitals mixed', rather than, 'female'. This is very peculiar, as only women are selected for this gender specification. It is not a gender specification, obviously, and the dhourties know it, and they are just goofballing every one, pretending there is some thing about a woman, who has a dick, that some how makes her a non-gender person, and that non-gender person, is a 'mixed genitals' person. She becomes confused, as she is told to sit with males, in the jail house, and she is jailed, I suppose, with males, as well. This is very peculiar, if you ask me, but it seems to be the case. If all men who have vaginas, were placed in a 'mixed genitals' classification, and were then told to sleep together in wards with mixed genitals women, I don't think that would be such a bad idea, but that is not the case, and only women with dicks are told to sleep in wards with males with dicks only, or males with vaginas, as well as dicks.

It is a goof ball situation, in the Clark County Detention Center, and I wonder how they figure their way through this situation.

On the premises of the Clark County Detention Center, the dhourties poison you with fumes animals of all kinds, and asbestos animals, in the lock up facility, and if you happen to develop pains, due to those poisonings, you are out of luck, as you will not be prescribed pain relief medications by the Clark County Detention Center medical staff, as they are not allowed to prescribe to you, a prisoner, any substance that is addictive, unless you have surgery, or unless you have a clear breakage of a bone in your body, such as ribs, arms, fingers, and so forth, or unless you can show that your body is severely damaged, such as from a knife wound, or from an other type of wound you recieved, during a fight, with an inmate, or guard for instance.

I will not be going back to jail, or to the Clark County Detention Center lockup facility, or to any of their lock up facilities, their fortresses for killing off the dualdigers, as that would be a death sentence, and I do not have the karma to die, so I will not be seeing any law enforcement agents, at my door, or in the park, once the Clark County Justice Court issues a bench warrant, for my not showing up for my court and trial date. I am GOD, and if any one could figure it out, I am doing religious prayers, and doing religious prayers, is not a lewd act or lewd conduct, even though I am naked while doing my prayers ceremonies. I was born naked, and I will continue to live, naked, in the shower, and in the bath tub, and when I am changing my clothes, and when I am sexaling, and when I am doing my Tai Chi aerobics prayer ceremony activities. Lewd acts are simply, acts that solicit sexual engagements with others, in the simplest sense, and so a wink would be lewd conduct, and a smile would be lewd conduct, and no one is going to go to jail, for those, except maybe in Muslim countries, where the women wear veils to cover their face, and where they force women and girls to wear gowns to make women and girls appear as if they live in a sack, in many cases.

Lewd Conduct Brings You Closer To GODLYNESS, Or The Love And Chastity, Or The Beauty, Elegance, And Grace Of GOD's Love For My Children

Sexual activities are not within the domain or realm of human beings to cast judgements about. Sexual conduct is not within the domain for human beings to cast judgements about, or to make any opinions about, legal, or otherwise. Why not? Because sexual conduct and sexual activities are devine, sacred, holy acts that can not be looked at in any way other than from the perspective of holyness and the graciality, or gracenesses of GOD, that's me. Graciality is sacred GODLYNESS, or Devine rapture with GOD.

Governments have no jurisdiction or decision making powers or authority over matters that deal with spiritual beingness, and one's relationship with one's creator, GOD, that's me. It's arrogance on the part of any person who thinks that he or she can regulate a person's behavior that brings one into direct contact with one's creator. The karmic scores for this type of mistaken belief and practice, by any one, are high, and the outcome is a punishing one. The penalties for interfering by legislation or by any other means, with a person's rights to live in harmony with one's creator being by advancing one's sexually committed life style of sexaling freely with people and animals to reach a higher state of goodlyness, and grace, and in time, make a closer bond and contact with one's Creator, GOD, that's me, is not a light penalty, and this behavior of legislating out by laws, codes, and regulations the rights of an individual to practice sexually commiting oneself to others by sexaling freely with others for reaching higher states of goodlyness and grace, and contact and closeness with one's Creator Being, that's me, GOD - and I'm the one responsible for all of this, as should be obvious by now - is folly, foolishness, drunken gayety, and ludicrously laughable behavior.

If and when you become devinely raptured with GOD, that is, when you begin to sexually orgasm and erotem or experience sexually orgastic and erotic sensations as a result of sexual mindfulness, and sexual contact with others, you are in the supreme state of graciality, and that means you are one with GOD.

To state any thing about the holy and sacred activities of sexaling, sexual mindfulness, sexual compassion for and with others, other than they are devine act, and acts that brings you closer to GOD, and acts that allow you to breath in the goodness of the GODLY spirit, or the love of GOD in your life, that means, the raptured sexaling orgasming goodlyness of a good orgasm, with full motors engaged, and all orgasming potentials realized, is folly and ignorance based behavior.

For humans to comment on rapturing with GOD in a sense of, is it good or is it bad, is sheer nonsense, and unacceptable, by any standards. It is a devine act that brings you closer to your creator. To say sexaling is this way, or that way, and so there fore, we are going to prohibit it, and so forth, is sheer lunacy, and not a notion that can be universally accepted as a reasonable statement by a reasonable person. It is the banter of minds that are insane, that state such remarks.

Sexual Compassion For And With Others And For And With Self

Sexual compassion for and with others, are the actions of engaging others to sexually erotemize them, and in so doing, to erotemize oneself, and to sexually orgasm others, and to orgasm oneself, for the sake of clearing up, or cleansing their and your karmic distresses, or karmic failures. Karmic failures are the naughtynesses, or misbegotten, mindless, dhourty like, animalistic behaviors, that lack compassion, and that lack mindfulness, and which is rife and riddled with jest and gayety directed at the victims of their torture sessions. This is mistaken, mindless, and uncompassionate behavior that causes undue and unjust suffereings and miseries to others, and draws one and all of my chidren further away from their relationship with their Creator Being, that's me, GOD.

Balancing Out Karma, It Is My Way, Or Thou Shalt Takeeth The Highway! And Getteth Thoun Self Out Of My Universe!

On the one hand, there is a need to balance out one's karma by engaging a person's life, and by bringing that person to a point of suffering where at the mathmatical formula for balancing out karma, and cleansing a person of his or her karma, will be satisfied. This need to balance out one's karma is based on a mathmatical formula, that must be followed, to allow people to balance out their karma, so that they can live as a nearly decent human being.

The need to engage others, in retributional recoursivistic actions, for the sake of balancing out their karma for them, is a compassionate act, that can be done with passion, and compassion, if one's mind is a 'pure' mind, and the mind of GOD, that's me, John Francis Ayres.

Only my mind is pure enough, and capable of GODLY passion for my children, that will bring a proper result to the lives of my children for balancing out their karma. The dhourty menacers, think they are mini gods, and they think it is their right and obligation, as stated in their code books, to help others with their karma, and so they are always, brutally punishing and tortureing others.

There is a long history to this, that will help explain how this got started, and I am partly to blame for their beginings as an organization, as I helped design and write their code books. It is not clear in my memories how much I helped them to get their start, but as a sexaling lay organization, they had and have the right to make their own code books, that follow basic premises, established by me, long ago.

Their behavior is too far out of line, but I used them as a supplemental assistive group of persons to assist me, in many ways, to allow my children to get their karma straigtened out. It was and is an imperfect organization, as it is run by imperfectly minded people. It is time to disband their organization, as now, in the Gurkian Age, there will be no other methods allowed for straightening out people's karma, other than the one's that I insist on, the ones that I implement with the assistance of my working children, the ones that I will use, to straighten out my childrens' karma, over time, as we progress along to the future.

The Ludicrousness Of Playing 'Footsies' With The Insanity Driven Dhourty Government

For me to contest a charge of 'lewd conduct' with the insanity driven Dhourty government is not an act that I will be engaging myself in. By insanity driven, I mean they believe they are all mini gods, and they believe they have the ultimate right to determine others' destiny. This is sheer insanity, and they are all mentally ill, and that will be proven, once you begin your studies in the programs that I and my working children have lined up for you to study and participate in.

What Is Lewd Conduct?

Lewd conduct is an act, that draws others to a higher state of knowing GOD, in that if you engage in a sexaling act, as a result of 'lewd conduct', or the act of soliciting others to make a sexual statement, or that is, to solicit others to commit them selves to a sexual activity, or action, for me to contest a charge, of 'lewd conduct', as I was saying, is sheer nonsense, and ludicrous behavior, and it is not in the domain of human beings to condemn 'lewd conduct' as lewd conduct is grateful to GODLYNESS conduct, as lewd conduct, and lewd behavior of sexaling with others, which is also a type of lewd conduct, is a sure way to reach higher states of grace, and that means, you grow closer in contact with your creator as a result of your lewd conduct.

Gratefulness to GODLYNESS is a condition of being enraptured during the sexaling orgasming phase of sexual and erotic thrills inducing activities. The ejaculation and orgasming of males, and the orgasming and ejaculation of females, and the running or flowing of the sexaling juices from a females' body brings on a higher state of grace, and it brings you closer to your pure, devine, self as a 'child of GOD', and I am GOD, and I know this kind of stuff, so take my word for it, and get your brains, unbrainwashed, and get your dicks and vaginas busy, and learn what purity of self is all about as you sexal for weeks, and months, and years, non stop.

The longer you sexal, the higher you will go, in terms of reaching a higher state of closeness to your Creator, that's me, GOD. For the dhourities to unfuck up them selves and their brains, and for the dualdigers to unfuck up them selves and their brains, and for them all to get their act together, to where they can appreciate the higher states of GODLYNESS, will take some time, maybe a few kabillions plus years, or more. I am, technically, a dualdiger, and so I am also in that lot, but I have an advantage, in that I am GOD, and it is easy for me to stay pointed in the correct direction, for gaining a higher sense or appreciation, over time, for the Love Of GOD, as my brain is minorly connected to that state of being. There is a connection, in my brain, that will carry me forward, and that will allow me to lead all of my children, to this higher level or state, or condition of beingness in harmony with the Love Of GOD, over the years we are sexaling together, in my religion, during my religious ceremonies and all of my religious activities, forever.

With your experiences of coming closer to GODLYNESS, your life becomes purer, and your karmic records that you carry in your body, hidden behind the particals in your body, on different layers, or dimensionalities, and you can learn more about this, in the courses we offer, for you to learn to sexal for a living, and so forth, the records you carry begin to disintegrate, and they pale or loose their sharp, duralangular edges, is one way of looking at it.

Duralangular edges is a term used in math, and I'm not familiar with it, but it must be something to do with geometric shapes. In any case, the edges sharp off, and that means, they drop off, and begin to form more loose, or flowing, curvatures, as they disintegrate. Think of a box with sharp edges. If the box is beaten on the edges, the box will loose the sharpness of the edges, and slowly, if you beat at the edges of the box, long enough, the box will begin to crumble. Well, it is sort of the same thing, and your karmic records have these types of geometric shapes to them, as we package things to do with your karma, in tiny containers, and then affix them to your karmic records. This sounds peculiar, but we have a way of doing it, and it works well, and we can disintegrate these 'packages' or capsules, and as we do, we straighten out or make lighter, your karma. This needs further explaining, but you'll study it in your courses, when you begin to study for the various programs we have for you to take and learn about how things work and about how things are in my universe.

The sharp edges are slowly, very gradually, lost, or smoothed off, and your karma changes, slowly, very gradually, as you acquire more and more knowing GODLYNESS, and knowing GOD experiences for your self, as you orgasm your way to blissful, purity.

It takes a lot of coming closer to GODLYNESS experiences to do anything significant for your karma, and for cleansing the karmic records in your life, the ones that are hidden in the dimensionalities behind the particals that make up your body. There are layers and layers of dimensionalities, and they nearly go on, forever. There is a limit to them, however, and between this dimensionality, and the final dimensionality, you have huge, and vast store houses of stockpiled karmic records. We find lots of places to hide them, and you won't believe how long it is going to take you to get all your karmic records that are stored not only in the layers below the particals in your body, but elsewhere, through out my whole and entire universe, behind the particals or in layers of dimensionalities, under the particals, that exist as matter, and as types of energies, and as types of many other things, throughout my universe.

Storing And Dealing With Your Karmic Records

Your records are stored from here to kalamazoo Michigan, and that is a phrase that says, they are every where, and the amount of time needed to erase them all, and deal with them all, bit by bit, is quite large. We've been here, a long time, and we've stored up your karmic records, every where. If you think this is a simple job of erasing your karmic records, you are mistaken, and you had better prepare your self for a long term, and long haul project for erasing your karmic records. Though the process of cleansing your karmic records is slow and gradual, through the knowing of GODLYNESS experiences you acquire, over time, the cleansing effects do occur, and your karmic burden is reduced, a tiny bit. You have stockpiles and stockpiles of karmic records, and we have found every imaginable way of storing them, and we have shrunken them down, to pint sized records, that are very tiny, and we have the technologies to do this, and we can resize them, and then place them inside of the holding cells, in the many dimensionalities behind, or underneath of the particals in your body, and in your vicinity where you live, and near the planet where you live on, way out to very far away from your planet, to nearly half or so away across the universe, the current sized one, or nearly that far. Your karmic records that interplay with your life, at the moment, are stored out that far, and we have others, stored and hidden elsewhere, as well, that are just sitting there, waiting to be dealt with. Our placing of your karmic records, along with every one elses, in this manner, deterimines what your karma is.

With this storage method, it keeps your records where we want them to be, for us to be able to determine what your karma is, and for us to be able with my religion, and with your religious activities, of sexaling with your self, with others, and with your sexaling with animals, as sexaling is sexaling, and there is no distinguishing of

the effects of sexaling. That is, your sexaling brings you closer to GODLYNESS, no matter if you sexal with an ape, or baboon, or with a monkey, or pet goose, or neighbor, or sister or brother, or your child, or mother or father, or the conductor on the train, or subway, or the stewardesses and stewards in the airplanes you fly in, or on the trains you travel and commute to work in, or on the cruise ships you vacation on, those of you with a little money, or with the workers in the casinos and restaraunts that you frequent, if you happen to live in Las Vegas, or other places where casinos are a part of the local life style, and so forth, with your sexaling experiences of coming closer to GODLYNESS, as you orgasm, and as you pulsate with energies that purify your life, these energies, and other energies my kids have a lot to do with, in the transporting of them to you, during your religious activities, and other things that are like energies that also cleanse your karma, but that need further clarification as to what they are, these energies, etc., erase your karmic records, in a priority determined manner with your karmic records stored in this manner as described. You will learn more about this, in detail, as you begin your studies once you have access to the software package that the FBI, and government agencies are in the possession of, as I've explained about.

For the present, I am stuck in a swamp like sand box, a parcel of land, inhabited by dhourties, who are assasins, and killers for hire, who work hand in hand with the dhourty police, and dhourty members of law enforcement, and their dhourty staff. Dhourty hospitals also work hand in hand with the tunnel rat association of dhourty assasins and killers for hire, and with the dhourty police and their dhourty friends, and dhourty advisors. All dhourties work with one and another, in their local area, and they are generally, well connected with each other, in that local area, but only a few of them know about what is going on, with myself, GOD, and with my battle to over throw the dhourty led governments of the world.

The Dhourties Are Not Informed As To What I Am Doing, And Few Of Them, Know Any Thing At All About Me

There is no TV or media broadcasting about what I am doing, and they only have their 'propaganda' TV to watch and to gain information from, in addition to their 'propaganda' news papers, and 'propaganda' news magazines. They do not exchange much information, as they are prohibited from discussing business, except in the underground 'fortresses', the 'torture' facilities for torturing the dualdigers. Even in those locations, they do not generally discuss anything to do with business as usual types of stuff. Only important topics or issues, such as John Ayres trying to destroy the Lesbianists, or similar topics of importance, are allowed, and not much discussion of any thing of interest, is exchanged by them, even in private. They are busy with torturing the dualdigers, and it is a waste of time, to discuss private, personal, or local issues, and even state or national issues, and they are not allowed by their code books, to discuss

'wasteful' of time, issues with each other, while they are on their tour of duty.

Lewd Conduct Should Be Advanced, Not Prohibited, In A Sane Society

Lewd conduct should be advanced in any society, that has a sane, municipalator, or manager in charge of laws and criminalities, and not 'condemed' as is the way it is handled in this society. This will lead to the detieroration of and the disintegration of human relationships, and it will end all possiblities that people have of attaining a higher standard of spiritual beingness, or spiritual goodlyness engaged in a love relationship with one's creator. The action of sexaling brings about a state of euphoria, but in that euphoria, there is a holyness that is hard to penetrate into and perceive, as sexaling in our demented and twisted minded society, is a condemned activity, and that is clearly brain washed into every one's minds, as that is a propaganda ploy of the Lesbianists, the dhourties. Arresting ladies who sexal for a living, is one propaganda technique the Lesbianists use to alter the minds of people. Christian values, of, sexal only with one's spouse, is saying, you can not sexal with others and if you do, you will be committing a wrongful act. That is also clearly stated in Christian concepts, and it is another brain washing technique, not to mention, a most devious one, that is highly rewarded, with maximum penalties, in my karmic score card approach to managing my universe, and you will learn more about that, when you begin your 'Managing My Universe' course work, and you will also learn about it, as you go along, and learn the principals of my religions, past, and present.

Lewd conduct is not a topic I will discuss with prosecuting attornies, or with DA's, or with judges, or with police, as they are not qualified to say a word about the realm of GODLYNESS, in their inferior roles as varmint hunters, or criminal watchers, and on this planet, as criminal torturers and killers. They are not fit, the Lesbianists, mentally, to judge or determine the value of sexaling. They are so anti-sexaling in their actions and words, and they are so incredibly twisted up in their brains with regards to sexaling, they will never come any where near me, or close to me, not one of them, as they are too twisted in their minds, to be allowed by my children, to come any where near me.

The joke the Lesbianists promote about sexaling, where they publicly condem it, and privately enjoy sexaling with their co-worker dhourties, is a big joke, the dhourties are playing on you, and you are being goof balled, here, as well, into believeing that sexual promiscuity is a 'bad' thing. You are a fool if you believe that, and I am here to change all of that negative thinking, that you are burdened with, that the dhourties have fooled you into beliveing, if you in fact, do believe that sexual promiscuity is a 'negative' thing, as that, as I've explained, is the only way for you to erase your karma, and to ease the burden of karma in your life.

Like it or not, if I had wanted you to wear clothes when you were born, I would have designed your bodies to have clothes on them, when you were born. Your skin is your clothes, and it is only a matter of time before you realize it. I did not design your bodies with any other clothes on them, for your birth, and so, all you need to live in, in moderate climates, is your skin and hair. That is all you need and you will all get used to it, one day, living in your skin, and hair, only, after you begin working for me, sexaling for a living, as I have explained about.

You are all going to work for me, erasing karma, from now on, by sexaling, as soon as I get my religious ministry, established. My kids will be building the facilities for you to live and work in. When they will begin building the facilities for you to live and work in, is the question, that I do not have an answer for. But I am praying, that it will be as soon as possible, as I do not need to be surrounded by dhourty jerks in the park, who call the police every time I arrive to do my Tai Chi aerobics excercises religious prayer ceremonies.

The dhourties in the park, and the dhourties at the police station, and in the Clark County Detention Center, are all partners, who work hand in hand, along with police department, sheriff's department, and other law enforcement clerical dhourties, law enforcement dhourty judges, and prosecuting attorney dhourties. We are surrounded by the dhourties, in government, such as all the politicians running for president, and all the politicians running for vice president, including, former mayor Guiliani, who was with other dhourties, primarily responsible for the World Trade Tower bombing, as I've explained about.

These dhourties, and their dhourty friends, in society, account for a large segment of our society. The ordinary people, for the most part, former Lesbianists, i.e., dhourties, in previous lifes, are another large segment of our population. One other segment, is my, what I call, my public sector service workers, animal people, who eat and torture dhourties, and others, who need their karma balanced out.

The dhourties are well aware of these animal people, and there are some dhourties, who can not function, brainally, very well, and these dhourties who can not function brainally very well, are not that different from these animal people, as they both do the same basic thing, and that is torture people, and torturing people helps to balance out karma.

We are in a new age, the Gurkian Age, and I have a whole new religious program, for balancing out karma, and you will all participate in it, if you want to balance out your karma, and if you want to erase your karma, and you will be in this religious program, for eternity, sexaling with each other, as I have already explained.

Organ Animals And Sexaling

I mentioned the organ animals and their ability to make notational thoughts to your brain. The 'I need sex' 'I need sex' drive in your pants, or panties, on the front side of your groin, or on the underside of your groin, or in your butt hole, the urging out, of 'I need sex' 'I need sex', or in the boobies of women and girls, the urging, 'I need sex' 'I need sex', they are all notational thoughts from the sexaling organ animals in your body. Let's get used to this fact, and grow up, and deal with things, logically. They are calling out for our assistance. They want love and affection. They are hungry for love and affection. I put them in your body the way they are so they will help you in your daily activities of sexaling. Now let's get real, and let's pet those organ animals, when they call out, saying, 'I want sex, please pet me now!' It's be kind to organ animals week, this week and every week from now on, until we learn to be helpful to all of our sexaling organ animals who need petting, and until we learn to be comfortable with our sexuality. Let's get real, and let's get the governments of the world to strike down the laws regarding sexuality, nakedity, and sex between younger people and older people, and let's also get the governments of the world to strike down all the laws regarding the use of opiates, and aphrodesics in our daily diet and in our quest to get healthier. We need these in our diet, as I've mentioned before, and we will push ahead until we get the dhourty governments of the world to listen to us, and then to comply.

All Hands At The Quarter! Ready Your Weapons! Off Shoot Now!

That means, get to your stations, and prepare to fight. Get your weapons in firing order. Discharge your weapons.

That means, get naked, get your dicks, scrotums, your vaginas, labia, all your sexaling equipment, such as your titties, your chests, your pelvises, your hips, your tummies, your groins, your butt cracks, your butt holes, your shanks, your backs, yopur shoulders, your necks, your under arms, your feet, your palms, your toes, your fingers, your tounges, your lips, your mouths, your throats, etc., and get every little or big organ animal in your body that is hiding in you, to work, working for you, as they are all designed and built for you to use for sexaling enjoyment, and that body you are in, is designed and built to be used for sexaling with your self, with others, as well as with animals, and get ready to use them, and get using them, now.

Keep Firing Till Ordered Otherwise!

That means, do not stop sexaling, till you are ordered to.

Captain Off The Bridge.

Eyes, Ears, Noses, Throats, Tummies, Buttholes, Dicks, Vaginas, Expeller Ports, And Who Knows What Else, Oh My! - Subtle Ways Of Brain Washing People - What Is Sodomy? - Societal Brain Washing - Hair Ports

- Teeth Ports Updated: 11-08-07 Rev.b 05:50

Eyes, Ears, Noses, Throats, Tummies, Buttholes, Dicks, Vaginas, Expeller Ports, And Who Knows What Else, Oh My!

Did you know that we have lots of organ animals inside of us? We do. And do you know what else? Each one of them, has its own brain. It has lots of brains inside of it, and each one does a particular function, or maybe many functions. Probably lots of functions, I suppose. In any case, each one has eyes, and each one has a nose, one or more, and each one has a mouth, and each one has ears, and each one has a throat, one or more, and each one has a butt hole, and a dick, or a vagina, or maybe both, or maybe something in between, or maybe, some thing that is not like a dick or a vagina, and is not in between, but it is some thing that is wholely and entirely different from any thing we are familiar with as far as reproductive organs go.

They also have tummies, and expeller ports, which are ports or openings, that help them to expate the juices that there are inside of them. What does expate mean? I think it means, to spit out. They expate, or spit out, all kinds of juices, from lots of expeller ports, or expeller opening holes, that open and close, and when they open, juices come drooling out of them, and when they close, the juices stop coming out, and the fluids drool and drain off and go some where, such as down a via duct, or a channel, and out into a pool, where there are animals, swimming, and snorkeling, and looking for food to eat.

Anyway, it's a confusing world, inside the body, if you don't go into it, and look around for your self, at all the possible hiding places, there are animals hiding, and eating up one and another.

We can look inside, and that is much safer, with microscope technologies that will allow us to look inside, into all the different habitats that there are, where animals are living, eating, making children by themselves or with others who are like them, and so forth.

There are all kinds of odd creatures living inside of us, and we haven't even begun to understand who is in there, and what they are all doing. I think we need the cooperation of the governments of the world, the dhourty governments, that I've explained about, and when they give us a little cooperation, we can build the types of microscopic technologies we need to look inside of our bodies, and see all the little animals that are moving about, and eating, drinking, swimming, fooling around, walking around, and just playing around, or making love with one and another, to make babies.

Did you know, too, that there are optical nerves, that are a little like optic fibers, and they connect many of the organ animals inside of us, up to optic cirtcuits that then allow them to see out side of our body.

That means, they can see the world around us. Did you know our whole body is covered with microscopic, and smaller, optic ports, or viewing

windows, and viewing ports, to allow the organ animals inside of our bodies to see out side the human body.

It's true. There are also nerves that are channels, like optic ports, but they are sensory ports of different kinds. These sensory ports also connect the organ animals up to the skin of our bodies, so they can smell the fresh air around us, and these sensory nerves act like little noses, and they are all over our body, in smaller than microscopic sizes, as well.

There are also sensory nerves that function as ears, for the organ animals, and they are connected up to the skin of our body, so that the organ animals can hear things, that are going on, around us.

There are other sensory nerves, that connect organ animals up to the surface of our skin, and these sensory nerves, allow for communication with other organ animals in other people's bodies.

The organ animals all see each other, the outsides of each other, and they can even see inside of your body, with special heat wave signatures, and other technologies, that allow them to peer inside of your body, and then see their organ animal friends, more up close.

That means, they can see each other, and they can talk with each other. They have sensory nerves that transmit code to the special ears of the other organ animals who they wish to speak with, and the special ears of the other organ animals pick up different frequencies, and different coding structures, and then they can communicate back and forth with each other.

You didn't know that, did you. Well, it is a secret the Lesbianists, or dhourties, do not want the dualdigers to know about. Do you know why? Because, their Christian bullshit is just that. A pile of bull shit. Not only that, but their sciences are all full of shit, too. If you know that there are organ animals who want to see out side your body, and view and communicate with other organ animals, who are in other people's bodies, then you will want to allow them to hear as best as they can, and you will want them to see as best as they can, and you will want to let them smell the fragrances outside your body, of other organ animals, as best as they can, and so forth, and that means, you will want to take your clothes off to allow them to see outside, and hear outside, and smell outside, and speak outside to other organ animals, with no interference from your clothes, and skirts, and pants, and underpants, blouses, bras, shirts, socks, shoes, jackets, handbags, brief cases, and so forth.

You would want to stay naked, as much as possible, because that was how I designed you to be. Did you know that? Well, it is true. We have to let the organ animals inside of our bodies get as much fresh air, and as much sunlight, and as much sensory input as possible, from the outside world, and from other organ animals, for them to be happy, living and working where they do, inside of our bodies.

Does that make sense to you? I hope it does, because we are all mistaken in our beliefs that we must wear clothes.

Nudity promotes the health of the organ animals, inside of our bodies, both mentally, emotionally, spiritually, and sexually. They get turned on by the fragrances of other organ animals, and by the sights as they look at other organ animals, working in your body, and at the figures of other organ animals, and at the sexy looking sexaling ports, or dick and vaginas, of other organ animals. They are like puppy dogs, in a way, but much more complicated, and much more intelligent, many of them, any way.

They have complicated code structures, that allow them to speak back and forth with other organ animals, in ways that allow them to tell jokes, and to tell funny stories, and to sing songs, and to teach other organ animals who are like them, about things they know about.

Not many of you may know this, but all the dhourties know this. They have to keep it a secret from you, so that you can continue in your ignorance, thinking you are 'created in the likeness of god' which is total bull shit and trash.

Well, now that we understand that much, it is time to investigate and get this all cleared up. Now how do we investigate this? I don't know, but maybe when we get the cooperation of the dhourties in government, we will get some software from them, the software that I handed to them, or the software that they have hidden away in secret filing cabinets, which they can allow you to use, to see inside your body, and investigate all these things.

Do you think the organ animals like being trapped inside of your body, unable to see out side, or hear outside, or speak to others, outside, because you live so far away from each other, and you live in tiny boxes, homes, or houses, or apartments, and condominiums, etc., where you live by your self, separated from others.

I don't think they are very happy that you are all living in your tiny boxes, which serve as homes for you, where you live by your self, much of the time, and you pay no attention to the needs of the organ animals.

They need light, sun, shade, coolness, brisk breezes, and the scents and smells of other organ animals, and the nearness of others, to them, so they can communicate and chat back and forth with their friends, the other organ animals in other peoples' bodies.

You need to marry each other in large groups, in other words, and you need to stay togehther in large groups, and you need to be naked, twenty four hours a day, in large groups, and you need to go out side and play naked, in the sunlight, with others in your groups, and with others from other groups, to allow your organ animals to get all the opportunities to meet with new people, other organ animals, who are as intelligent as they are.

Did you think you were the only intelligent people in the whole universe? Well, some of my organ animals are almost just as intelligent as you are.

In some ways, they are as intelligent as you are. Did you know that? How does that make you feel. You have a cooped up organ animal, lots of them, inside your body, who you do not even know about, and they are all wanting to make friends with other organ animals, and they are all wanting to meet with other organ animals, while they work for me, and for you, inside of your body.

Well, the little secret of the dhourties, this one, any way, is now out and open to the public, and you can make of it, what you want, and you can either research it, and learn about the facts of this, or you can deny it, in ignorance, because you think 'Jesus saves' and you think 'god' or 'allah' is going to make you a nice home, after you die. What garbage talk.

The dhourties have made you swallow their garbage talk, all this time, and they have been fooling you, and they have been rejuvenating their bodies, and then playing as if they were some kind of watch person, or care taker, who could decide your futures for you.

Well, I don't think Hillary Clinton, or Barack Obama, or any of the other dhourty government leaders who are running for a presidential candidacy, or for a vice presidential candidacy, is going to like the news that you now know what is going on, a little more than before, inside of your body, and that you are about to reject their religious garbage talk, and all of their sciences garbage talk, and all of their statutes garbage talk, that help to keep you in check, and in line, and that keep you going, working and growing older, day after day, paying the taxes for maintaining their livelyhood, while they have a way to rejuvenate themselves, as professional moldists, and while you have nothing, other than a token watch for working thirty, or more years, devoted to the company, before you were released from work, with a meager pension, to find a grave yard plot, for placing your bones in, after you die, and go back to my Epcot Center, for refurbishing, and for making you as good as new, nearly, for your release as a new tummy baby, back to one of your former neighbors, or former relatives, as a new baby.

Isn't that about the stupidist thing you've ever heard of? And isn't that a joke. Well, they get away with it, every day, and the dhourties who support them, organizationally, are in on it with them, and none of them deserve much of a nice smile, or any thing else, for that matter, for all their mean jokes and tricks that they have played on you.

That means, go right ahead, and kill them all, as I do not care any more, about any of these dhourty kids of mine, unless they are willing to cooperate with all of my dualdiger kids. Do you understand that? Go to the dhourty courthouses, and blow them up, and go to the police stations, and jails, and prisons, and blow them all up, and medical

hospitals are other big places which dhourties like to torture dualdiger kids of mine, under them, and even in secret rooms, in them, and so are universities and colleges, and large schools, and low income housing projects, government buildings of all kinds, and blow all of them up, along with the Pentagon, Fort Knox, and so on.

We have to get the dhourties in government to cooperate, and to do that, we need to send them a message. So if you wish to blow Washington, D.C., out of the surrounding area, and level the white house, and every one in it, then go right ahead. You have my explosive formulas, on my bulletin board, so go right ahead, and do what you think is right.

Now, we need the cooperating dhourties, to tell us every thing, and we want them to cooperate with us, as quickly as possible. Are you listening, Mr., And Mrs. Dhourties? You had better be, as some people may not like you, very much.

When the organ animals all get charged up, then you, your self, get charged up. Did you know that? You bet it is the truth. When your organ animals spot a pretty looking girl, if you are a boy, or if you are a girl and your organ animals spot an attractive looking guy, then your organ animals inside of you leap into the air, almost, and they are saying, 'I want to sexal with that person.'

If you are a girl, you begin drooling out of the vagina, and your body stiffens up in many places, and you get firm, and ready for sexaling with the other person. Other things, such as hard titties, and hard tittie nipples firm up, and your butt muscles firm up, and your vagina swells up, and your organ animals are all saying, 'Let's go for it.' What fools we are to ignore our organ animals. If you are a boy, your dick gets firm, and you get a big one. That is a hard dick that inflates and grows large.

Subtle Ways Of Brain Washing People

It is in the Christian teachings and Muslim teachings that say, we shouldn't go around, looking with 'roving eyes' and, we must not look women and girls in the face, in the muslim countries. They teach about 'lewdness' which is a totally made up, fictitious concept of theirs, as there is no such thing as lewdness, and they only make us think there is, with their unique, deceptive, and tricky brain washing techniques that they use in the mass media, and in schools, and in churches, and in synagogues, and in mosques, and so forth. Saying 'incest' is a bad thing, or that 'sex with a minor' is a bad thing, or that 'casual sex' is a bad thing, and only 'loose women' have casual sex with others, or 'tramps', and calling girls 'sluts' and 'whores', and using words like 'mother fucker' as a way of saying the person is a bad person, or using the word, 'rape', or 'gang rape', to mean some thing 'bad' happened, or in the same way to use the words, 'sodomy' or to 'sodomize' another, to mean some thing that was against rules of some 'abstract' 'god', or something, who supposedly left a bunch of

rules to live by which are in the quoran, or bible, or Judaic texts, and so forth, all these examples are used to subtly brain wash us, into thinking that sexing is an area of life, that we had better be careful with, because if we are not, we may end up breaking a law, or we may end up being sent to jail, or we may end up being shot by someone who does not approve of our behavior.

What Is Sodomy?

So called, 'sodomy' or, poking some one in the butt hole with one's dick, without the person's permission, is not a nice thing, but if you ask, and if the person says, yes, fine, then, you need to massage the butt hole, for half an hour or so, or in some cases, a little longer, till you make the butt hole muscles relax. When they are relaxed, and after the person has pooped out the poopy, lumpy stuff in the butt hole channel, or the rectal column, or descending colon, is another word for rectal column, and I've talked about the 'shank' in an earlier post, and you should read it, once the shank, or butt hole tube is loosened up by massaging the opening hole, the butt hole, suffiently, then it is easy to slip in a dick, and women have dicks - unless the doctors at the birthing hospital, cut off the baby girl's dick when she was born, saying, 'The little baby girl will never be able to find a husband, if she has a man's dick on her body' and with that, they often just do surgery, and cut off the dick, and close up the pee tube hole, and then pretend like nothing happened, and the mother and father never even tell the girl she had a dick when she was born - and girls and women like to slip their dicks into the butt hole tube, also, and they like to ejaculate into the butt hole tube and orgasm as they ejaculate and as they sexal boys and girls, and men and women, with one's dick inserted into the butt hole tube, which feels like a vagina, and is generally the same type of thing as a vagina, except it is not for baby making, but it is for sexaling with others, as I've explained, and men and boys like to sexal or put their dicks into the butt hole tube, and eventually ejaculate, and orgasm, as well, and there is nothing wrong with it, and it brings you closer to 'GOD', that's me, as you orgasm, as I've explained. The butt hole tube begins to leak sexaling juices, as you sexal it with your dick inserted into it, and that is a natural phenomena, and no one can deny that the juices that leak out of the butt hole are sexaling juices. So 'sodomy' is just another bull shit idea of the dhourties, who wanted to make sexaling between men and boys, and between women and girls, 'illegal', and then use that, to subtley brain wash people that sexing the butt hole is a 'no no', and you may go to 'jail' if you sexal the butt hole, and get caught doing it. Aren't the dhourty kids of mine, stupid? Did they think they could keep this a secret, that sexing the butt hole tube, is a pleasureable experience, and once you get used to it, your capabilities for sexually orgasming, double and triple, and even go higher, as you can sexal the butt hole tube, for days and days, and with many partners, and it can go on for weeks, and weeks, non stop, especially in women and in girls, who can sleep, with one eye partially open, while sexaling all night, if the partners are

quite enough. You can orgasm so many times, one after another, after another, after two and a half weeks, to four weeks of sexaling the butt hole tube, day and night, and orgasms will continue, non stop, and soon, you will not want to stop, and if you continue for long enough, you will eventually pass out from orgasming so many times. So, 'sodomy' no matter how you look at it, or gang rape of the butt hole tube, is a good thing, and it brings you closer to GOD, that's me, but you have to ask the person for permission, to do it correctly, and you can not force your self on the other person, as that is called, assaulting another person, and that is not a good thing, so ask, first, and if the person says, okay' then it should be perfectly alright, but just don't tell the police, or your school yard security officer, since they will report you to the district attorney, and you'll get arrested for some stupid crap, bullshit, legalistic nonsensical, dhourty minded, cheap trick they are using against you, to stop you from having a good time, sexaling. Aren't they idiots. Well we are going to clear up, all of this, and in time, all women and girls, and all men and boys, will learn that sexaling the butt hole tube, is a fun thing to do, and a fun sport, for men and boys to engage in, and a fun way of sexaling for women and girls to engage in, and in time, you'll all love sexaling the butt hole tube. And you girls and women who had your dicks cut off, before you were old enough to say whether you wished to have it on your body, or not, which is kind of a nutty thing to think about, as of course, you would want your hands attached to your body, and of course you would want all your limbs attached to your body, and the dick is just another limb, but it is a very important limb, because it can help you to draw closer to GOD, that's me, as you sexal with your dick, you girls and women, who had your dicks cut off, you can eventually grow them back, as I've explained about, before, using tissue and organ regrowth molds and foods for the molds, which will make the organ animals begin to make babies, so that your dick grows back, eventually. It may take some time, but little by little, it will grow back. The dhourty girls and women, who come out for a tour of duty, always have their dicks cut off, so that they can fool people into thinking that they were not born with a dick. It is one of the Lesbianists' rules that they cut their dicks off, before they come out for a tour of duty. Ask one of them, and you'll see that I'm right about this. They grow it back, once their tour of duty is up, and once they have a suitable place to live, where they can live for the next, few thousand years, while their bodies repair them selves. It takes a few thousand years for a dick to grow back, completely, or nearly that long, but once it grows back, it is usually as good as new. Seldom is it not good as new, and only if the person has some kind of karmic problem, will it not grow back, perfectly. That's very seldom, but it does happen. You can try again, after you sexal a long time, and you will be able to erase your negative karma, that keeps you from having a perfectly formed dick to sexal with, if your dick does not grow back, perfectly, the first time. In time, after you erase your karma, enough, your dick will begin to shape up into a perfectly formed dick, but it takes a long

time, to get it perfect, so don't worry, as we will be here, for ever, and we will be sexaling for ever, as this is a new age, the Gurkian Age, and we are going to be sexaling for ever, from now on, all of you, and me, too.

Societal Brain Washing

These tricks with words the dhourty kids play on us and use in the media, is societal brain washing, and there are other types of brain washing they use, such as in sunday school, by saying 'the lord said that you should be chaste and love only your one wife' or something to that effect, or that 'you should love, have sex, and have children with only your "legally married to you and sanctioned by the government, and here is a piece of paper to prove it" husband'. Well, there are still other ways of brain washing you, by showing you how in muslim countries, how strict people are about sexing with others who they are not married to. This is subtle brain washing they use in the media to try and scare you into following the rules they set up for you to follow. They think you and I are fools, and that you and I will not question their authority, but that is now all coming to an end. That means, it is the end of an age, a long age, from the very begining of our time in this universe, and we are starting a new age, the Gurkian Age, and we are going to start all over, and right all the wrongs, and get every thing corrected that needs correcting.

When you live a healthy life, with full nakedity, daily, every day of the year, you begin to charge up the organ animals, inside of your body, and when you live and work with others, in large groups of people, who are also naked, twenty four hours a day, seven days a week, you and they all begin to get charged up by your organ animals. It is no secret, that if they feel good, then you feel good. If they feel invigorated, and sexually charged up, then you will feel invigorated, and sexually charged up.

What fools we are, not to know this. I don't mean, you, my dualdiger kids, but it seems we should all know this, as it would be common sense, if we were taught this in the public school system.

We are not given the chance to know about this, as the dhourties are all too secretive, and they like feeding us their garbage talk, their school teachers, and their professors, and their sunday school teachers, and their law enforcement workers, and their judges, and their government administrators, and so forth. I think we should get rid of them all, and start out, fresh, but that isn't the way to go, as we want to get them to cooperate with us, and to do that, we need to invite them into your homes, into the play time dungeon cells, where you can have them teach you all the secrets to sexaling, and all the interesting information on living long, and prolonging our lives, with molds, and foods for molds, that feed our organ animals, and allow us to live forever as the organ animals, reproduce, as well as the secret about where we can get spare body parts from, which is from the sexaling juices of men and women, and even animals.

Well, it is about time, we started to find out the truth about all of this, and if we do not get the cooperation of the dhourties in government, pretty soon, there are going to be a lot of angry people, pretty soon, as word of all of this, begins to spread from person to person, as the dhourty news companies, the brain washing media companies, with their bullshit news stories about 'incest' and about, 'lewdness', and about, 'prince charles and his latest secret sex scandal', and so on, all the petty bull shit garbage talk they make us swallow, as interesting news stories, which secretly send messages to our brains, that sexaling is a 'no no', and that is total garbage talk, but we are influenced to believe that sexaling is a 'no no' by subtle means, every day, over the air waves, on tv, in the news, and in the mass media print, in the news papers and news magazines. Well, it is time to burn the 'Inquirer' down, and blow their basement up, as well, as they no doubt, have the same kinds of torture facilities for torturing dualdigers, under them, as well.

Hair Ports

Where else do the viewing ports, or optical ports, and the other ports for sniffing fragrances, and for hearing sounds, and for hearing various coding frequencies, that the organ animals communicate back and forth on, exist?

They grow in nose hair follicles, eye lash follicles, eye brow follicles, nose and throat hair follicles, stomach hair follicles, intestinal skin hair follicles, external skin follicles, head hair follicles, facial hair follicles, leg, arm, and body hair follicles. The sensory ports grow along with the hair follicles, extending their way up the hair shafts, and to the surfaces of the hair follicles so that they can pick up the light waves, and various energies waves, for sounds, and for colors, hues, textures, texturing hues, light and grey, dark and white, prisms, or prismatic colors.

The organ animals transmit in not only sound orientation patterns, but also in light wave frequencies patterns. There are many energies wave forms that they can transmit and pick up, and the multitude of variances and types are far greater then we are aware of. The organ animals can transmit off and send out various frequencies, with various tonal orientations. They can transmit in light wave energies codings of various shades, colors, hues, textures, and patterns. The variety is nearly limitless, and it will take you a long time to study about all of them.

There are odors that they can pick up, and there are odors that they can generate, when they are healthy. They are not healthy, unless you feed them, correctly. If you do not feed them the foods that they like, they will not send out any special energies wave forms, or even odors, or much of any thing else, as they are starving, and have no way of supplying the needed nutrients to the internal organs of the organ animals, for the internal organs to produce the energies needed, to transmit and send signals out in.

If you do not feed the organ animals the foods they need, they become pathetically weak, and they will barely do any thing, at all, in terms of communicating with other organs animals.

If the organ animals do not communicate with other organs animals in our own body, and in other people's bodies, they can not meet and talk with other organs animals, and they can not sing to each other, and they can not give off the scents and odors that signal health and well beingness and that bring cheer and happiness, and vital energies to each other, as they sexually arouse each other, and that in turn, sexually arouse us, as a spin off of their good health, fitness, and well beingness.

They are stuck in a pathetically weak physical condition, all their life, narly starving to death, because of the poor diets we are encouraged to eat, that do not give them the nutrients they need to get healthy, and fit. The pitifully poor in nutrients foods such as corn flakes, or cheerios, raisin bran, total, and so forth, manufactured by Kellog's or Proctor and Gamble, General Mills, Quaker Oats, etc., and all the other, pathetically nutritionless foods that the major and minor dhourties' foods manufacturers produce, that we eat, day in and day out, do nothing for the health and welfare of our organ animals, and these foods barely keep us alive, nutritionally speaking.

The organ animals, when healthy, can use all the possible transmission frequencies that are available to them, to speak to others, and to communicate with others, and to begin to have a good time, in life. They deserve to have a good time, in life, just as your pet dog does, and just as your pet parakeet does, and just as your pet cat or ferret does.

We can not starve these animals inside of our bodies, which is basically what we are doing, at the present. We can not deny them a view to the outside world by covering up our bodies with clothes, women's and girls' faces with veils and women's and girls' hair with scarves as in the middle east, and with face powder and mascara, as is the tradition in the west, and in some eastern countries.

We can not deny the organ animals companionship with others of their species, if you can call it that. They are living beings, and they are creatures. They are breathing, and alive, and they wish to be fed, and they wish to stay healthy, and they wish to meet others, and they wish to be able to communicate with others, and we deny them those rights of theirs, and others of their rights, because we are ignorant as to the fact of their existence in our bodies.

This is obviously a conspiracy, if you haven't figured it out, by now, and we have to put a stop to it. We also have to educate our selves as to how to feed them, and how to properly feed our bodies for maximum nutrient intake to the organ animals, that are the basis for our physical, mental, emotional, and spiritual well beingness.

In time, we will learn more about all of this as we get the cooperation of more and more of the dhourties, who are willing to cooperate, and who are willing to teach you, my dualdiger children, about all of this. I am GOD, and I am your mom and pop. I can call you my children, and I can call my dhourty children, my children, and you had all better get used to it, as now and then I will address all of you as my children, whether people like it or not.

I've got lots of children in my universe, and some of them look like fucking apes, and some of them look like fucking monkeys, and some of them look like ostriches, and you won't believe the mutataions they have gone through, some of them, and actually, lots of them. Many of them are mixed mutations, that they have gone through, and lots of them look nothing like any thing you've ever seen before. They are gruesome looking, and scarisome, and you would not like to meet them, guraranteed, as they will tend to eat you up, if they can. It's the result of their karma, and it will be a long time before we erase eneough of their karma to make a difference, so as to bring them back to a form that is close to or similar to what a human being looks like, for us to then mix with, marry with, and sexal with. You were all the spouses of each other, from way, way, back, and you will be the kids of mine, and you will be marrying each other, again and again, as there is no limit to the number of times you can form a parental union, and that means with more than one spouse in tow. You can form parental unions with more than one spouse, and there is no limit, practically, to the number of spouses you can have, male and female, at the same time.

I'm not sure what the limit is, but it is a working number of people, and that means, any where below a few trillion, or maybe even a few more. You can have nearly an unlimited number of spouses, and that's probably more like it, but the trick is, how do you manage all your spouses, that is, how do you serve and protect, and sexal with all of them, when the number grows over a few million or more. Well, it takes time, and experience to teach you that, and you'll learn all that, in your courses you'll be taking, when you start up studying, and participating in the programs that I and my children have planned for you, once we get a little further into the Gurkian Age. We are still in the preparatory stages, of my religous revolution, and soon we will be getting past the preparatory stages, and how soon, I can't estimate, but obviously, we need the cooperation of the dhourty governments, and of the dhourties to begin to get any where.

Teeth Ports

We have teeth and finger nails, and toe nails that also have optical ports, and other sensory ports in them. Of course our animals inside of our teeth want to make friends with other animals inside of other people's teeth. There are also many other animals inside of us who can use the viewing, or optical ports inside the teeth, and in the finger nails, and in the toe nails, for viewing outside of the body, and for looking at other animals in other people's bodies, and then for

communicating with those animals. All these animals are organ animals, and they are on the job, twenty four hours a day, seven days a week, and they barely ever sleep. They like to make contact with others of thier kind. I don't know if 'species' is correct, but they are all my worker animals, or in this case, worker organ animals. They need respect just like your puppy dogs and your cats and your parrots do, if you are a normal human being who respects other living beings. Well, any way, lots of these organ animals inside of us, are very clever, and much more clever than we are, in some ways. You can study about them and how they communicate with each other, and how they have fun with each other, once we get the educational materials that I handed out, to the FBI, and that was passed on to the governments of the world, as I've explained about, before.

We probably should not cover up our faces with makeup, because that makes it hard for organ animals to see out side into the world around them. It also makes communicating difficult, when we put on face makeup, that is, when women and girls put on face makeup, as that gets in the way of the optical viewing ports, and it gets in the way of the ear ports, the hearing ports, or the incoming signals ports. Also, finger nail polish and toe nail polish is of course, obstructive, and it prevents the organ animals from communicating out and it prevents the organ animals from recieving incomeing light wave and signals waves transmission signals that depend on your having clear and not painted toe and finger nails. Hair coloring in women and in men, and beard coloring in men, is also obstrutive, and it prevents the incoming and out going signals, and is just as bad as nail polish, and makeup, or face veils, such as they wear in the middle east, and scarves over the hair, which women and girls in the middle east are also forced to wear. It's not fair, what is going on. We are being suppressed by our dhourty friends, who do not treat us very well, aren't we. We are being told how to live our lives, and it is all totally fictitious, and made up, it's a fairy tale dream land they have created, with artificial rules, and artificial religious beliefs, and artificial laws that mean nothing, when we look more closely at them, such as the 'lewdness' laws, and the 'incest' laws, and the 'nakedity' laws, and the 'no public sexaling' laws. It's all foolish dribble drabble, or nonsense, they made up, from their not so smart, brains of theirs.

Well, anyway, we'll get it all straightened out, one day, soon, I hope. Until then, let's talk with our friends, and tell them about all of this, and see what wild kinds of parties, you can begin to have with your friends, all naked, and having fun with each other. Invite your dhourty friends, too, because they have a lot to teach you, and if they do not wish to come, then maybe you should ask them why? Usually, they are older, as not many of them can rejuvenate themselves to look much younger than eight or nine years old. Some girls, though, they may be able to rejuvenate them selves to what would appear to be a four year old, if their bones are small enough. In some Asian countries, some girls may look even three and a half years old,

because they are so tiny, some of them, and their bones are very small. The smaller your bones are, the younger you can make your self look, when you rejuvenate your self.

Captain Off The Bridge.

Dick and Cunt Animals, And Other 'Sexaling' Organs Animals

Dick, scrotum, and cunt animals, and boobie animals, and breasts animals, and butty butt animals, butty butt hole animals, groin animals, underarm animals, and every organ animal in your body, they do not like you to wear clothes.

Organ animals like to be able to smell the odors around them in their environments, and that means, the odors on the outside of your body, as well as the odors on the inside of your body. There are noses, or odor sensors on the outside or skin of your body, and on the surfaces of the hair shafts, finger nails, and toe nails, odor sensors that function as noses, as I explained. The tiny organs animals in side of your body, as well as the big organs animals inside of your body, they all have noses attached, or odors sensors that function as noses, to smell the odors, in the atmospheres, around them.

The organs animals inside of your body, as well as your dermal skin organ animals, hair organ animals, teeth organ animals, bone organ animals, sinew organ animals, cartiladges organs animals, ligatures organs animals, and so forth, they all get a better sense of what is around you, if you do not wear clothes. They can smell or sense the odors of other people, and the odors of the organs animals inside of other people, that are in the air on the outside of your body, that drift in the air, from the ladies' bodies organs animals and from the

mens' bodies' organs animals.

Incompatible Fumes Animals

The organs animals of your dick, cunt, groin, breasts, hips, butt, legs, and so forth, all enjoy the odors of other people's organs animals. If you leave your windows open, in the day time, and at night, and bring in the fresh air of the outside with the odors of kids, girls, boys, men, and women, and if you take your pants off, and underpants off, and your shirt or blouse off, and socks or stockings off, as you get healthier from a proper diet for feeding your organs animals, and for feeding you, as well, when your organs animals become healthy, they will perk up right away as they sense or smell, the odors of the kids, girls, boys, women and men, and elderly people, who are in your neighborhood, walking by your home, or by your apartment, daily.

The odors of other organs animals, such as those of dogs, cats, birds, and other animals, are all good for the health of the organs animals inside of your body and they perk up the organs animals to some extent. The best compatiblities of organs animals, such as mens', womens', girls', and boys' organs animals, perk up the organs animals inside of your body, and inside of your dick if you are a male, and inside of your cunt, if you are a female, and all of your sexaling organs animals, the most.

All animals, big and small, all have organs animals with similar shapes, and all the organs animals come in different sizes, and they all give off wonderful odors that stimulate your organs animals appetite for enjoyment, and for fun, and entertainment.

Organs animals get their entertainment communicating with other organs animals, and by exhanging odors and messages of various kinds, and singing and talking, and if they can not smell or sense other organs animals, because you are always wearing clothes, and if they can not see them, or hear them, your organs animals and you will slowly perish, and their interest in living, and your interest in living, will slowly diminish, and they will grow sad, and you will also grow sad.

The poly carbonates plastics and fumes animals' smells, and the over powering, over whelming poisonous fumes animals that mess up the smell sensing of the organs animals, and mess up their brains, bodies, and nervous systems, will cause the organs animals to lead sick, lonely, unhappy, tragic lives, and they will slowly die, as they get eaten up by fumes animals from gasoline, car exhaust, industrial pollution, plastics, nylon carpets, polyester sheets, polyester blankets, nylon and polyester clothing, polyester pillows, nylon stockings, polyester and nylon panties of women, polyester and nylon socks and underware of men, and as they get eaten up by other incompatible fumes animals from the chemicals industry, and from the petro chemical industry, and from the brewery industry.

I've mentioned, before, store bought whiskey, gin, vermouth, and so forth, all have various types of alcohol in them, that are made from different processes, from the petro chemical industry and from the chemicals industry. That poison but drinkable alcohol is blended in with naturally brewed, normal, drinkable whiskey, or other alchol beverage, and then sold to the public to drink. Apple cider vinegar has one type of this poison but drinkable alcohol in it, and wines, beers, and liquors all have poison but drinkable alcohol of different types, in them.

Organs animals do not like to smell or inhale, or sense, the odors of the poly saturates plastics animals and the odors of the plastics animals' relatives from the chemicals industry, and from the petrochemical industry.

Organs animals prefer the odors of cotton, and wool, and of natural fibers from plants, and odors from fibers from animals, and organs animals get sick if they are forced to sense the odors of the poly saturates plastics animals, and other related animals, from the two industries, mentioned above.

If organs animals are forced to inhale, or sense the odors of these plastics animals, and fumes animals, that are incompatible with human beings, they get sick, and they die, eventually, from sensing them over too long a period of time. It is not good for them, and it is not good for their nervous systems, and the fumes are not good for you, either. The plastics and other detrimental fumes animals, find the organs animals, tasty, and they eat them up, little by little.

Your body gets eaten up, little by little, by these incompatible fumes animals, who eat up little and big organs animals, and then poop and pee out all kinds of petroleum related substances, and other harmful chemical substances.

These worsen the health of your organs animals, day by day, hour by hour. One day, your dick or your cunt, will not wake up, any more, as you grow older in age, and it is because your organs animals in your dick, or in your cunt, have been too seriously damaged by all the incompatible fumes and other animals, that eat up your dick organ animals, or your cunt animals, and you loose the sensitivity, and you loose the organs animals that provide juices of various kinds, to provide your body with aphrodesics animals. Your desire for sexaling begins to fall, as you grow older, as a result, and you loose your interest in sexaling.

The butthole organ animals hold out longer than the dick and the cunt organ animals, and the titty nipple animals, lips animals, and other organs animals needed for sexaling with each other.

That means, your dick may be of no or of little use, or your cunt may be of little or of no use, but your butt hole, and your shank, are doing, better, perhaps, depending on your diet. If your diet is filled with foods that are loaded in preservatives, iodized table salt,

petroleum tainted sugar, and or sugar tampered with by the use of many other unhealthful to humans animals, and if you eat a lot of fast foods, or foods made for you, such as precooked meals, you serve from the freezer, for a fast warm up in the micro wave oven, which adds more unhealthy animals to your diet, by the way, your organs animals may not be in very good shape, in your mouth, throat, tummy, shank, and in the butt hole.

Micro wave, by the way, leaves lots of animals of various kinds, on your skin, just like the sun light does. The micro wave animals, get together with other animals that should not be on your body, and which should not be in your body, and they start breeding, and feeding on each other and feeding on your body, and they begin making a nice home of your body, and later in life, your body will erupt in a catastrophic destruction, when all of a sudden, your whole body erupts with countless, incompatible animals, eating up your body organs, inside and out.

Preventing Body Melt Down Tragedy

Molds animals, and funguses animals, and ocean salt, and raw, pure sugar, and other nutrients, will help your body to over power all of these incompatible animals, and the incompatible animals will eventually all get destroyed if you are diligent and make sure that you eat the types of molds animals, and funguses animals that are needed in your body. You can learn more about this, when you get the software package from the government, as I've mentioned about, before, or when you make friends with a dhourty, and learn from him or her, as I've mentioned about, before.

The Dhourties never mention this type of outbreak of animals in peoples' bodies that eat up their bodies, all of a sudden, on the TV or in the news papers, as a person who has an outbreak is too grissely to look at, and the person smells, terrible. It most often occurs in the elderly, and the elderly are hidden from others, and no one in the general public ever sees the elderly when their bodies begin to get eaten up by these animals. It can happen to persons who are not elderly, if the person is exposed to dangerously high levels of toxic fumes animals, and other incompatible animals, on a daily basis.

The person's body, melts, and sours, and becomes greasy, as the organs animals are all being eaten up, all of a sudden. It often starts on the head, as it erupts on the scalp, or on the face, hands, feet, or skin. Lots of these people live in side their homes, and never come out, as they look and smell too awful, as they slowly die. Many times, when a person at home is sick, after an eruption begins, a family member or friend will often times shoot the person, or assist the person with a suicide, as the person is too horrible to look at, as he or she begins to melt, and as the person begins to smell awful.

Often times, if the dhourties get to these people, first, the dhourties transfer these people to the torture rooms, below hospitals,

and below prisons, and below, welfare housing projects, when they find them.

Keeping People Alive To Torture Them

They then use their technical know how, to preserve the decaying person, as he or she is being eaten up, and they extend the life of the person, with their medical sciences know how, and they do peculiar things to these people, and turn them into people who never die.

The brain does not die, easily. We think it does, but it does not die, if you place it in a bottle of formaldehyde, or in a bottle of rubbing alchohol. You can place nutrients for the organs animals to eat, and they are just like fish, with the right combination of nutrients mixed in the solutions. The brains do not die, and they are alive, and that means, the person is alive.

They do not need to breath. We and our four legged animals, and two legged birds animals, need air animals and various gasses animals, that carry in lots of useful substances, that mix in with our blood, and then carry the useful substances around the body, bringing them to the organs animals, for them to absorb through their bodies, through tiny little pores, and openings, that the organs animals can suck in the fluids through. They also expell the fluids, once they have absorbed the useful substances they need to keep them alive.

If you place a solution that has all the needed ingredients into it, and then force it into the lungs, the person will no longer need to breath, air and gasses, animals, and they can live almost indefinetly, though it is a very cruel thing to do to a person.

They do not feel well, and they can no longer talk. They do not like it, and they begin to hurt, all over the body. They will, however, stay alive, and then as they stay alive, the dhourties torture them, futher.

They do this to elderly people, all the time, when elderly people, begin to decay and degenerate into a blob of oily substances, that smell very foul.

Of course, no one is going to tell you about this in a medical journal, as it is a trick or prank, the dhourties use, as they like to torture, dualdigers, if they can get a chance to torture them.

If you walk around with no clohes on, the organs animals in your body, will perk up, and they will begin to feel better. If you feed them properly, with molds from breads, and with the foods the molds animals like to eat, such as beef, ham, fish, foul, eggs, corn, cheese, yogurt, milk, cream, spagetti, linguini, pizza, breads, peanut butter, jams, fruits, vegetables, nuts, and so forth, and then poop and pee out, you will make your organs animals diets, much more healthful to them, and they will return to active duty, for you, and they will begin to work for you, as they are very intelligent, almost like

people, many of them, and some of them are even better, or smarter than people, such as your brains organs animals, and your nerves organs animals, many of them, and lots of other sense organs related organs animals.

The brains and nerves, and other related organ animals, and also, some other organs animals, besides them, make it possible for you to think. If we didn't have them in us, in many different places, throughout our entire body, we wouldn't be able to think, and we wouldn't be able to do any thing, such as walk, talk, shake hands, eat, pee, poop, think, sense things, make love, sexal, and so forth.

Natural Plant Fibers, Fur Fibers, Clothing, And Cloth

We need to be allowed to walk around, and live with no clothes on, when we can. If it is too cold, we need to keep our selves warm, by dresssing in compatible clothes materials, such as cotton, wool, fur skins, and clothes made from various plant fibers such as hemp or jute fibers, coconut husk fibers, cotton fibers, wood pulp fibers, heavy, fiberous leaves fibers, reed fibers, root plants fibers, tuborlongs fibers, and soy bean husks fibers, and barley husks fibers, rice husks fibers, corn husks fibers, and various other plant fibers, that we can plant, grow, harvest, and then mix and match with compatible fibers for making the clothing to keep us warm, or to make the clothing, we like to dress up in, and go out to the movies, or to the theater, or to go shopping, to school, or to work in.

You can also harvest natural fur fibers from chipmunks, squirels, deer, elk, antelope, goats, cows, horses, donkeys, mules, and from bears, ducks, chickens, parrots, swans, flamingos, sea otters, oselots, dogs, wolves, dingos, kangaroos, koala bears, and from other animals. These fibers, once you harvest them, and process them, with patented technologies, the Dhourties, hide and conceal from Dualdigers, can also be used to make cloth, and clothing materials.

The dhourties and others, know about the technologies needed for making natural fibers cloth from leaf fibers, and from wood pulp fibers, and from fur fibers, but the dhourties do not allow people to make these types of natural fibers cloths, as they are too healthful for you to wear and use in your daily life.

Many people need not wear anything, when the climate is mild, and warm. If it is rainy, they need some protection, maybe, from the water falling, to keep their hair dry, and to keep them feeling comfortable. After the rain is over though, the clothes, such as a poncho, or rain jacket, can come off, and your body's organs animals will be able to smell, or sense, the fresh odors after the cool rain shower.

The dhourties do not want you to walk around, naked, as they know that your health will improve. They also know that your animal organs and their health, will improve. When the animals organs health improves, they will be able to become more active, and that will make you more

healthy, the more active, and the more interested in life, and in living, they become.

The dhourties made up the fictious bible stories, and they made up the fictitious islamic, judaic, and christian creation stories, and they made up the evolution stories, as well, and they try to make it seem that the bible is the source for morals, and the bible says that butt fuckaling is wrong, and that sexaling with other persons, other than for making children with your wife is wrong.

People Living Inside Of Our Planet

They then based a whole culture, every culture on this planet, nearly, on fictitious myths, and untrue stories, to keep people from enjoying sexaling, because they say, the dualdigers make too many babies, and if they are not stopped from making babies, they will over run the dhourties, as there are ten times the number of people on this planet, than I originally estimated, which was in the area of nine billion or so, to eleven, thirteen, or fourteen billion. There are ten times that many people on this planet, and there are lots of people living inside the planet, we do not know any thing about.

How Do Volcanoes Work

Volcanoes have a heated mass of easily melted rocks materials, and that pools in a tube, in a 'beaker' like tube, and it swishes around, as the earth turns, and it gets hotter and hotter, and the crumbling mass of rocks, melt down, and they swish around in the bottom of the 'beaker', and every where else, outside the area of the 'beaker' stays warm or cool, and the futher you get away from the 'beaker', the cooler the rocks get. We have people living in the core of this planet, we know nothing about. We have other people, living in other areas of the sub surface areas of this planet, and we do not know any thing about them, either. They all arrrived here, as members of the sexaling for a living outbound expedition new planets settlement programs, from many other planets in our universe.

The dhourties do not like us to make children, and they want to keep us impotent, and they want to keep us separated from each other, and they want us to keep on our clothes, so that our organs animals will not feel good, as they choke on fumes they inhale, or sense, and as they die, from early childhood, on upwards to our old age. We will have less interest in sexaling, as a result of the lower sexaling interests that we have, as we grow up, from fewer and fewer healthy organs animals, and this keeps the population of the dualdigers down, and they think they have a right to do this to us.

They have too many people on this planet, to keep them busy, tortureing, daily, and they do not want any more people on this planet, as they say it is enough to keep them busy, as they work, torturing them. The dualdigers, that's me, and people like me, who can remember their relatively recent birth date, usually people who are

less than one hundred and ten or twenty years old, come and go, and come and go, as tummy babies, and then, as we grow old, we die, and we go back to my Epcot Center, for a short stay, until there is a new tummy mommy and tummy daddies, who help the tummy mommy have a tummy baby, and back to this planet, you or I, or some one, else, comes.

Fictitous Religious Ideas And Fiction Based Social Customs, Taboos, Societal Rules, Legalistic Laws, Codes, Regulations, Prohibitions, Punishments, And Penalties

The dhourties have built our societies around the world, based on their written documents about fictious biblical persons such as 'Moses' and 'Abraham', and 'Jesus', and about the fictitious statements these people supposedly said. These people, 'Moses', Abraham, Jesus, and others, did not do any thing, other than live as dualdiger peasants, in the middle east, the mythlogical land of 'Judea', the land supposedly promised by god, to give to the Jews. They made fictitous statements up, fairy tales, for each religion I orginally taught, and they tore out and threw away, all of the orginal teachings, I had left behind, in all of my teaching my religions, lifetimes, and there were a lot of those life times, and I taught a lot of religions. The other religions, and cults, were made up by the dhourties, as I've talked about, before.

The dhourties made up the ideas, completely, about lewdness, lewd conduct, indecent exposure, indecent conduct, sexually explicit conduct, soliciting sex is bad and wrongful behavior, prostitution is wrongful behavior, prostitues should be punished, sex offender, sex offenders should be punished, child sex offender, child sex offenders should be punished, pandering or pimping, sodomy, i.e., butt fuckaling is wrongful behavior, good girls do not have sex with others before they get married, the need for women and girls to be 'virgins' until marriage, incest or sex between members of the same family is wrongful behavior, persons who enjoy incest, sex between family members, should be punished, public sex is wrongful, public sex acts are wrongful, persons who enjoy public sex should be punished, persons who do not dress properly and who do not conform to public standards, the standards the Dhourties set, should be kept out of restaraunts, bars, pool halls, amusement parks, movie theaters, ice skating rinks, tennis tournaments, hockey games, foot ball games, rugby games, basketball games, baseball games, swimming pools, ponds, rivers, lakes, and off of public beaches, or be put in jails, there is a need for removing the dick foreskin of baby christian and jewish males, there is a need for removing vaginal or cunt tissues from muslim girls, and lots of other taboos and misleading stories, in cultures and in civilizations around the world and around our universe.

Male And Female 'Circumcisions' And Female 'Dick' Removals

The dhourties require all of their members of their organization to rejuvenate their bodies, and when they go out for a 'tour of duty', the dhourties must follow the customs of the society they are joining,

as pretend citizens. Male dhourties who join christian, muslim, and jewish societies, under anesthesia must have their foreskins shaven off their dicks. Female dhourties who join any society, under anesthesia, must have their dicks cut off, amputated, i.e., surgically removed, and then their pelvic region, with cosmetic surgery, must be made to look like the female never had a dick. Female dhourties who join muslim and jewish, and some christian societies must submit to have their vaginal, or cunt tissues, sliced off, by surgical means, under anesthesia, and the cunt tissues that remain must be made to look in appearance the same as all other muslim female's shaved off, or sliced off cunt tissues.

Butt Fuckaling And Sexaling

Butt fuckaling is a very healthy activity for you and for your friends, as the dick animals and the butt hole animals, and the butt hole shank animals all get to smell the odors of other organs animals, in different people's bodies. Sexaling is a very healthy activity, of course, as it allows all the organs animals in your dick, if you are a male, and in your cunt, if you are a female, and all the other sexaling organs animals in your bodies, to smell or sense each other, and to talk, sing, play games, and communicate with each other, in different people's bodies.

The Dhourties want you to be unhealthy, and they do not want you to enjoy sexaling, and they do not want you to enjoy good health.

Water, Chlorine, And Flurine, And Burning Body Syndrome

Tap water has chlorine in it, as I've mentioned before, and it also has flurine, and both of these are powerful chemicals, and you can get easily poisoned by both of them. People who inhale the gasses in tap water, the chlorine fumes animals, and the flurine fumes animals, which are also found in tooth paste, will develop a medical condition called 'burning body' syndrome. You can also develop partial body, burning body syndrome, such as 'burning arms' syndrome, or 'burning legs' syndrome. People who spend a lot of time at the pool side, inhaling fumes from the pool water, may likely develop 'burning body' syndrome. Your body, at the skin and under the skin in the muscles, feels heated up, burning or painful, sometimes almost scorching, and uncomfortable.

Detergents soaps fumes animals, industrial soaps for janitorial uses, also cause burning body syndrome, and asbestos animals also cause burning body syndrome. Fumes animals also cause fibromyalgia, as I've mentioned.

Burning body syndrome and fibromyalgia are often misdiagnosed as 'panic disorder', or 'chronic anxiety disorder', or as 'anxiety disorder', or as some type of severe allergy related disorder, such as what firemen and firewomen often get, when they go to houses and apartments that have caught fire, and try to put out the fire, and the

firemen and fire women, and police officers, and on lookers, inhale all the plastics fumes animals, that come out in the black, peculiar smelling smoke that comes from plastics burning.

You are better off to not breath these fumes, and you should evacuate the area, when a house, apartment, or building catches on fire. It is too hazardous to your health to stay around, and try to put out the fire, or to watch from a distance, as every one will get ill from inhaling the burning plastics' fumes animals that come out with the smoke.

Body Melt Down Prevention And Salted Food Oils

You can salt food oils, such as corn oil, vegetable oil, olive oil, sunflower seed oil, safflower oil, and nut oils, with a little ocean salt, as you pour in a small amount of salt to disolve into food oil, or into a mixture of food oils. You do not need to disolve much ocean salt, just half a cup or so, to every one quart to three or even seven, eight or nine quarts. The more salt, the better, as it will help destroy the incompatible fumes animals, and other incompatible animals, the Dhourties unleash on us, daily, in the products we buy at the super markets, and in the air we breath, daily.

Salted Food Oils, Molds Animals, And Funguses Animals

You can ask a Dhourty friend of yours about what types of molds and funguses animals to use, in making your salted food oils, more healthful to use. Ask him or her to help you make the molded breads with the molds and funguses animals, or get the software I gave to the government, that they are in possession of, and that they refuse to distribute to Dualdigers.

Use some of the salted oil to coat your scalp, and lightly coat your hair as you rub it in with your fingers. Dip your hands and fingers into the salted food oil, and rub the salted food oil into your scalp, face, neck, back, chest, tummy, pelvis, underarms, arms, hands, fingers, legs, feet, toes, groin, dick if you are a male, or cunt if you are a female, and into every pore in your body.

Also, rub the salted food oil into your butt crack and massage the salted food oil into your butt hole. Do your feet and toes, last, as there are many bad animals on the feet and between the toes, and under the toe nails. Make sure you rub or massage sufficient salted food oil into your skin, and wait several hours, if you can, before you wipe excess oil off of your skin, before you go out.

Under Arm Deodarants

You do not need under arm deodorant as it is filled with toxic animals that will destroy your body and eat up your organs animals. Use peanut oil for your underarms, and for your groin, and for your feet, and for your butt hole, and butt crack, if you are worried about unpleasant odors. You can also use any other nicely scented oil with flowers oils

mixed in it, as I've mentioned, previously, how to press flowers for making perfume oils.

Vaginal Douching Agents

Do not use vaginal douching agents, as marketed by Eve Arden, or by any of her Dhourty friends and competitors. All vaginal douching agents contain toxic bad animals, that will destroy your vaginal lining, and they will contribute to body melt down syndrome.

Washing Your Back Side, Your Butt Hole And Butt Crack, After You Poop

Use water you can pour from a flower watering pot, to wash off your butt crack, and wash out your butt hole, and to wash the poopal material off your butt area. Tamp or pat dry the butt crack and butt hole area with some toilet tissue, after you wash the poopal material off of your butt hole, and butt crack.

Bidets, Fountain Pooper Hole Washers

You can also use a bidet, or a toilet that sprays out water, up through a hose, or tube, so as to hit your butt hole, and butt crack area. After washing your back side with a bidet, use toilet paper, to dry off your back side. You can find bidets in Europe, and in the Middle East.

Wash your hands with mild soap, blended with salted and sugared food oils to make the soap less toxic to your skin and body. You only need one soap for all indoor purposes. St. Ives, Swiss Formula, Whipped Silk, and St. Ives, Swiss Formula, Vitamin E, are good body wash soaps, after you mix either one or the other with salted food oils. You can then use either one or the other for the face, hands, hair, and body, and for the bathroom, and for the kitchen, and for all indoor needs for soap.

You can take a shower, once, twice, or three times a week, and use salted food oil, on your scalp, hair, and skin, and that will protect your body from bad animals. You can use peanut oil, for a nice odor, and it makes your skin healthy, and body odors begin to disappear, if you eat a healthful diet of molds animals, and funguses animals, and the foods the molds and funguses animals like to eat.

You need to use a clean, dry or lightly damp towel, to wipe off excess oil from your hair. Let the salted food oil soak into the pores of your skin,

Molds Animals And Weight Control

If you feed your body the molds animals and funguses animals, and related animals, and then if you fill your tummy with food for them to eat, they will eat all the food, and they will grow plumb and fat, and you will stay slim and healthy. Food oils and fatty foods feed the molds animals and their friends, and so does whole milk, yogurt, and dairy cream with raw sugar. Meats and so forth, fruits, nuts and

vegetables are all good for them, and they all love these foods. You can feed them practically anything, that is normal for humans to eat, including pizza, spagetti, linguini, hamburgers, french fries, without the petroleum oils mixed in with the food oils for cooking, of course, and they will all devour every thing you feed your tummy with. As they eat and eat, and drink, and eat, they get fat, and full of food. They then pee out, and barf out, and drool out, and leak out, lots of healthful nutrients, for feeding the organs animals in our bodies. The organs animals do not gain too much weight, unless you really over feed them. They may get plump, a little bit, but they can excercise, regularly, and they will slowly slim down. If you do not have the molds animals and their friends in your tummy, and in your body, when you eat, the food will not get digested by any body, special, and it will get eaten up by some tummy animals, of one kind or of another, that your mommy passed on to you, when you were a tummy baby. That will feed the organs animals, some nutrients, but barely enough to stay alive.

We Shall Over Throw And Destroy The Societies The Dhourties Had The Dualdigers Build For The Dhourties

The Dhourties' nonsense is going to end, as you either make friends with the dhourties, as the Dhourties give up and surrender to you, or as you ask them to go to my Epcot Center, using one or another of my explosives formulas, as the Dhourties are not going to get away with much more of their nonsense, for much longer.

The Dhourties' make believe stories, i.e., the fiction of the bible, the koran, and the new testament, and the fiction based laws, codes, regulations, rules, customs, taboos, and so forth, the Dhourties wrote into law, for all of us to blindly follow and obey, are also going to come to an end, soon, as soon as we, the Dualdigers, over throw and destroy the societies that the Dhourties had you and I, and others, all of us Dualdigers, build for them.

Captain Off The Bridge.

Home Experiments, Keeping Alive A Brain In Tequila And Vodka

If you put a brain in tequila and gin, that is a good tequila and vodka, that is home brewed, and very delicious, and if you change the fluids, every so often, you can put a human's brain inside of a beaker large enough to hold the brain comfortably in the liquid fluids. The brain will live, and the thought processes of the person will continue, for an indefinite period of time. Maybe not forever, but, at least for a few million years, or maybe a little more. I don't know for sure, how long, but the Dhourties will be able to tell you. The organs animals in the brain, can survive with the nourishing fluids of the liquid fluids of good home brewed tequila and vodka.

A cat's brain, or a dog's brain can also live for an indefinite period of time, as well. Hamster brains, guinea pig brains, pig brains, horse brains, and chipmunk brains, will also. Chipmunk brains make funny noises, as the think to them selves. If you put a few electrodes into the brain area behind the ears, in a human being, you can hear the person thinking to himself, if you take the electrodes and connect them, safely, with a wire to a good ground on each electrode wire. That is the only safe ground you can make, and current electrical engineering sciences does not teach that, as the Dhourties want to see all the structures that the Dualdigers make, except for the ones the Dualdigers build for the Dhourities, eventually burn down.

The Dhourities will sneak into a building, at night, and wire the building, correctly, to keep the building the Dualdigers are building for the Dhourties, from burning down.

Each brain electrode wire must be grounded, or the person will not feel well, and the person will eventually begin to feel nauseated, and the person will begin to think he or she is vomiting, and eventually the person will begin to experience sweats, cold chills, shaking, and violent convulsions, that lead to trauma of the brain, and brain death. This brain death is a comatose condition.

Comatose Patients And Comatose Brains

A comatose condition is one's brain has stopped thinking, fully, but the person is still there, and the person will revive, but the person will not feel good, and unless the wiring is corrected, the person will go through the same experiences, again.

The organs animals are of course still alive, and they are not feeling well, either, as they do not like the electrical shocks that occur, occasionally, as the improperly grounded wire, back fires, and sets of a shock wave of energies into the surrounding liquids. Every one, on the outside of the brain, gets a tiny shock, and they do not like the feeling of it, as they were not created by me, to endure such shocks,

periodically, or whatever.

The Dhourities do this to their friends, wire their brains in a bottle or beaker of home brewed, good tasting Tequia and Vodka, when one of their friends is punished for breaking one or more of the rules, the Dhourities expect the members of their organization, to keep.

Using Chipmunks For Scientific Experiments

You can experiment on chipmunks, and wire the electrodes properly, and then ground them, of course, and get a professional electrician, or technician, to do the handy work for wiring the electrodes to a ground. The ground should be a good earth ground, with about eighty five feet of steel pipe, three inches round, gently pressed down straight down into the soft earth. Additional copper and magnesium particals, small chunks of copper and magnesium a few inches in diameter, 3/4's of an inch, to two inches, to three inches, to four, to five inches, each, sprinkled around, at different elevations, a few inches to a few feet away from the pipe, every one to three, to eight to ten to fifteen feet or so, as the pipe is pressed downwards into the earth, will help dissipate the energies currents, that come off from the brain, more efficiently.

The Lipporal Lobes

When you have the electrodes placed properly, in the chipmunks brain, just below and behind his ear cavity, the lipporal lobe, you will hear the chipmunk thinking to himself, or to herself, periodically. The sounds will sound like a high pitched, to low pitched squeaking, or squealing, and it will sound like the animal is talking in a language of clicks, and other peculiar language sounds, that may make you think the chipmunk is possibly from a strange, advanced civilization, from another planet, when in fact, he or she is just a common, dirt oriented, earth chipmunk.

The lipporal lobes of humans, are on either side of the brain, as well, and they are just below the ear cavity, to the behind of the ear cavity.

Experiment on a chipmunk, first, to see if you can get it wired up properly. It is against the law, that is, standard universal law, to experiment on any creature without the permissions of the governing body of trust authorities in charge of managing the day to day welfare of the people who are living in the trust union, or state.

Human, Monkey, Or Animal Brains In Beakers Or Jars Of Formaldehyde In High Schools, And Jr. High Schools, Primary Schools, Colleges, And Medical Labs

If you happen to see in a science lab, a brain in a beaker of formaldehyde, empty and throw away the contents of the beaker, and replace the contents of the beaker, after you have given the organ animals a nice bath, in natural, olive oil soap, with no petroleum

animals, or other similar, destructive bad animals, that are incompatible with human beings.

After bathing the organ animals in luke warm water, around, 98 degrees farenheit, or normal body temperature, with a light rinse off, and a gentle scrub off of any accumulated, dust particles, or dirt, that happened to get into the beaker, by accident, pull the brain organs animals out of the wash bath, and place them in a damp towel. The water ph balance number should be a four or four and a half, or five. Make sure their is no chlorine, flurine, or other animals in the water, such as stricknine, or arsenic, which you will typically find in tap water, in very low concentrations.

Giving the brains animals a good bath, will make them feel a little better, because their pee juices, and poopy juices, vomit, and so forth, have made the formaldehyde bath, a very stinky mess for them, for some time, and many of them will be dead, by now, and rotting.

If you know what kinds of molds animals to place into the new tequila and vodka bath, that will help remove the carcasses of the dead, or deceased organs animals.

The extra room created with the removal of the dead bodies of organs animals, will make it possible for existing, healthy organs animals to produce children, and the population of organs animals, will increase to near normal levels, over time.

The whole time, while the organs animals are busy, the person who is in the beaker, or the brain of the person who is in the beaker, will be languishing, in a state of partial to complete comatosic distress.

Once, after a long period of time, the person recovers, and it may be very long, several thousand, to several millions, of years, or even longer, in some cases, the person will wake up, and with a headache, like one has, when one recovers from a very bad weekend of drinking, the person will be very sluggish, for a long period of time, before the person begins to recover from the stresses placed on his brain activities and functions.

You can always find a cooperating Dhourty, who will let you experiment on him or her, to see if this works, and then, you can have fun, talking back and forth, to him or her, over the intercom system, you set up, with the help and expertise of the cooperating Dhourty, for this experiment. This will take much less time, to get the same results.

Cats And Under Water Breathing

As babies, we are all emersed in fluids in the baby jump sack, or the umbilical birthing sack, and we know how to breath, bringing in fluids, and expiring, or pushing out the fluids, in a rythmical manner, as we grow, every day, till it comes time to make the final leap, out of the baby jump sack, and into our world of air and gasses

animals.

You can take a cat, and put the cat to sleep with a little anesthesia, and then fill up the lungs of the cat, with ocean salt water fluids, or with fresh water fluids. Otters swim around in either one, but they prefer ocean salt water, to fresh water, at least, I think, most of them do, maybe eighty eight, to eight nine percent of them, do.

Otters, of course, do not breath air, under water, but they do breath water, under water. The Dhourties will never let you know this, and they tell you the Whale holds its breath, but that is not true, and they tell you the dolphin holds its breath, or the seal holds its breath, or the penguin holds its breath, or the walrus holds its breath, or the white, Alaskan, or Canadian, Arctic bear holds its breath, but these statements are not true, as they all breath, water.

Place the cat in the ocean salt water, or in the lake fresh water, fluids. After it wakes up, it will pass out, after a while. It may become frantic, before it passes out, and it may be fighting, in an attempt to figure out what is wrong, as it never finds itself underwater, not able to breath air.

After it passes out, it will take several days, but it will wake up, eventually, after up to eight to fifteen weeks, or maybe a few weeks longer, up to eighty eight weeks, to three hundred and forty five weeks, to five hundred or so weeks. At most, it can stay in the water, a number of thousands or maybe, tens of thousands of weeks, and any cooperating Dhourty will tell you the specifics on this.

After awhile, the cat will begin to re-learn, slowly, how to breath in a liquid environment. When it does, it will begin to move and swim around, looking for food to eat.

You can feed it fresh, live tuna, or other fresh, living fish, and it will smell it, at first, and it may not be interested, but if you let the blood of the fish, trickle out, a tiny bit at a time, and if you get the cat to notice the discolored water, the water with the blood drops in it, the cat will maneuver over to investigate, and sniff at the blood drops in the water. After the odors are processed by the cat's brain, it will begin to get hungry, and it will eventually chomp down on the fish in the water, and begin eating the fish.

The cat will love the fish in the water, and you need to keep the tank water environment, clean, and free of fecal matter, and pee fluids, so you need to freshen up the tank water, with fresh water, daily, by exchanging the water with fresh, clean water drawn in by pipes from a lake, or from the ocean. Be certain there is no spillage pipes in the area, for around three hundred miles or so, down to sixty five miles, to as little as thirty eight to fifty miles, as the spillage from sewer exhaust pipes in the lake, or in the ocean, will lead to a premature, early death on the part of the cat.

It is not fun to watch a cat die, so in that case, you should catch the cat, and remove it, and then incinerate it in a morgue type, high temperature, body incinerator.

Humans And Underwater Breathing

If you do the same, with a willing and cooperating Dhourty, and place him or her inside a slightly larger tank, he or she will wake up, eventually, and then begin to relearn how to breath, in a liquid environment.

He or she will not like the fact that you have him or her in a tank of water, and the person will try to escape. To prevent that, place metal bars, on the top of the tank, that are overlaying steel bars, of jail cell grade steel bars, welded together, in a criss cross pattern, and secured to the top of the tank.

Use acquarium grade window panes, and use good steel construction, to make sure the Dhourty will not take a rock from the bottom of the tank, or other hard, or metal object, and break the window on the tank.

The Dhourties, have hidden in their bodies, tiny, sophisticated tracer locater energies signals transmitters, and with their advanced technologies, the Dhourties' friends will track down the missing person, and then locate him or her, and then they will attempt to rescue the participating Dhourty, who you are experimenting in the name of understanding, and for the furthering and deepening of your scientific knowledge, with.

There is no way to avoid this rescue attempt, except to ask the participating Dhourty, before hand, where each one of the tracer locaters, tinier than a BB gun's BB, is hidden inside the body or teeth, or jaw bone, toe bone, or knee cap, etc., of the Dhourty.

You may need to set up a type of commode that is used in the space shuttle, or some similar type of commode, to keep the water as free and clear of loose fecal matter debris.

You can also feed the person, the types of fish, the cat enjoyed, and other raw meats, and foul. Cooking the meat, and using barbecue sauce, ketchup, mild red chili peppers, or other mild chili pepper, salt, pepper, or worstireshire sauce, or a good marinade and basting sauce, will make the barbecued, or steel pan fried meat in tasty oils, or marinated, basted, and grilled meat, tastier for the participating Dhourty. Use high quality steak, or beef, filet mignon grade or better, and then the Dhourty will enjoy the hospitality, even more.

The water in the tank, will suffice for drinking water, unless you wish to pass in a can of beer, or soda. Be sure to reclaim the empty can, as you do not want the participating Dhourty to be able to accumulate them, and then use them to damage or deface the inside of the tank.

After you have finished your experiments, you can allow the Dhourty to exit from the tank, and he or she will know what to do, to force the fluids up and out of his or her lungs. They all train in aquatic sciences, and they all know several, or many techniques to use, to expel the water from their lungs, successfully. The water will eventually drain from their lungs, as it leaks out of the lung sacks, through tiny perforations in the lung sacks tissue linings.

If the person passes out, or fakes passing out, hand cuff the person, with three to eight, hand cuffs, the prison style hand cuffs, with leg cuffs, as well, attached, and make sure the person does not slip a pin, or similar sharp instrument into his or her fingers, as he or she attempts to unlock each handcuff, as he or she fakes his or her supposed, but fake, unconcious state of mind.

After you suction out the water from the person's lungs, force in air, and apply CPR, and keep going, untill the person spits out all the fluids, and regains his or her normal breathing. Be sure the person does not bite your tounge off, as you are applying CPR.

Bogus News Stories On Supposed 'Drowning Victims' In The Dhourty, Managed, Owned, And Operated Media

A person will not drown, or die from submersion in the water, as the Dhourties have led us to believe, with their bogus news reports of persons drowning, in the media.

The person is merely passed out, and the heart need not even be beating. The Dhourties have the know how, and techniques they need, to revive supposed 'drowning' 'victims', and they transfer them to their underground torture rooms, for torturing them, when they pull them out of the water, or when they pull them out of the morgue.

Stroke Patients

Catastrophic stroke is not due to loss of blood to the brain, but it is due to brain wireing, being completely destroyed, so as to impair the person's use of his or her limbs.

Fallacy Of Cell Tissues Bursting When Frozen

We are taught in the media, that when a brain is frozen, such as in the case of the people, who have their head frozen in dry ice, or in cryonics suspension, under sub zero temperatures, that the brain cells, and tissue cells with fluids in them, burst, and there is no technology, or medical knowledge at present that would lead to the possibility for recovery of these burst cells.

The possibility of bringing people back at a later date for surgery, to heal them selves from some illness or, 'incurable' disease, is for the time being, an impossibility. It is often said on CNN, by Chuck Yeager, the TV media anchor person, that there is no known way and there are no technologies at present, to bring a person back from a cryonics suspension state of being frozen at sub zero temperatures.

There is much chatter in the nature oriented programs on TV that we need to study how bears can hybernate, and survive, during icey cold winters, in the Canadian Rocky's.

When brains freeze, the animals organs get cold, and they may get chilly, but the organs animals do not burst, but they do get solid, and they are icy cold, however they are not dead.

When you put roast beef from the super market in your freezer, you merely freeze the organs animals in the roast beef. When they thaw out, in your refrigerator, they are as good as new, except they are very cold, and perhaps a little wuzzy, or brain frazzeled, and their thinking is not too clear. Organs animals like temperatures somewhere in the eighties or nineties, or maybe a little higher, or maybe a little lower, as animals body temperatures vary, if they have lots of fluids to help keep them cool. If they get too dried out, and the fluids dry up, they will not die, but they will continue to live, until the brains begin to disintegrate, and chips of brain materials begin to fall or peel away, if we look at the tissues under powerful microscopes, in laboratories, that we do not have.

When this happens, the organs animals brains are falling apart, and even then, there is not complete and total darkness for them, as they can still see objects with their sensoring equipment that allows them to see things. They can also smell things, with their nose sensoring equipment, even though they are drying out, and not completely, dead, but only partially, living. Their thoughts are lonely, and they do not have much energy for talking or communicating with their friends, but they are alive, and they are mentally active.

When we put a person into the ground. Just because that person has stopped breathing, that does not mean that the person is dead. The person is alive, and the person's brain is fine, and well. It takes many years for that body to dry out, and decompose, sufficiently, to finally end the brain's activities of that person, so that the person, is then able to leave the body, with my children's help, and then go to my Epcot Center.

Shadow Cast Slumber

In the wilderness of Alaska, bears sleep in caves, and they may develop frozen bodies, but they are not dead, and the musculature, or rather, the muscle organ animals, are a little cold, or chilly, but when it warms up, sufficiently, the organs animals begin to chirp to each other, and signal to each other, and they begin to chat, and speak to each other, and play games with each other, and communicate, write songs, and poems, and sing to each other. They are very much alive, and brainally active, even though it may be a little cold for them. When they get too cold, they fall into a light slumber. When they thaw out, they begin to perk up, and they begin to chirp and sing to each other, much like morning birds sing to each other. Their brains are wired for this activity, and they repeat it like clockwork. The bear finally begins to unfreeze itself, as its body temperature

climbs, thanks to the activities of the little organs animals inside of the bodies of the bears.

Human beings are no different from bears, and they will freeze up, too, in cold weather. However, their bodies are the same as bears, and they have organs animals in their bodies, too. These organs animals all begin to thaw out, when it warms up, and they begin to chirp, and sing to each other, like morning birds, just awakening in the twighlight hours of morning, when there is still darkness all around, but the sun is on its way up, and the birds sense it, and know it, and eventually, the sun rises up over the horizon.

Human beings can thaw out, just like bears do, and just like all animals do, and they will wake up, when the organs animals warm up the human being - who was in a deep slumber, a shadow cast slumber - suffiently enough.

Shadow cast slumbers are slumbers where you think, now and then, that you know a little about what is going on, as you wake, momentarily, from a light sleep.

Grave yards are full of persons in shadow cast slumbers. When you use formaldehyde to replace the blood of a person, who supposedly died from some accident, or whatever, the formaldehyde functions better than the blood in the person's body, and it allows the person to continue to live, long past the point in time, he or she would otherwise, dry out, and fall apart, and disintegrate into tiny pieces of sawdust like particles. Even in these saw dust like tiny particles, there is still life activities going on, as the very tiny organs animals are, many of them, still fine and awake, and in a slumbering state, a slow motion type state, or mood.

The brains of these organs animals are not dead. Brains of humans are not dead either, after humans 'die' or 'pass on', as we are led to believe by the Dhourties, who feed us their nonsense like, looney, false trivia, which has nothing to do with science.

This is the state of things, and the Dhourties know it. They have grave yard after grave yard with shadow cast persons sleeping in coffins, every where around the world. The only way to make sure a person passes on, and then goes to visit my Epcot Center, with the help of my kids, for a short stay, until repairs are made, and the person is ready again, to come back out, and then get himself or get herself back into the body of a tummy baby, with the help of my kids.

My kids do all the work, and they have the technologies for making all of this possible. They also have the technologies for making my universe run, smoothly. My kids run this place, and they keep it running, despite all the problems we cause to our friends, neighbors, school teachers, parents, family members, and so on. My brain happens to be in command, but that is a different story. It's my cosmic brain, and it is connected to me, apparently, as it is always interrupting

me, while I am thinking, or sleeping, and causing me grief.

It likes to play jokes on me, and I get hasseled by my kids, who work for me, as my kids, collaborate with me, and they are the mouth piece, so to speak, for my brain. My kids have lots of technologies to use, to get into contact with me. They do this for me, to help me to communicate with my brain, so that I will wake up, and remember, 'Hey, I am GOD', my brain then takes over, and it tells me lots of stuff, with the help of my kids, who are the mouthpiece for my brain. My brain is very big, and my existence, as far as I can figure it, is boundless. So is, my brain, pretty much, so there is nothing to worry about, when it comes to whether or not, we will make it through this apparent crisis, that you have been reading about, from me, lately.

Well, never the less, regardless of how big I happen to be, and how big my brain happens to be, I have every thing under control, and my kids are going to continue to work for me, and do the jobs that I need them to do. I have so many kids, you will not be able to count them, and they listen to me, that is, to my brain. They do not listen to me, John Ayres, so much, as I am brain dead, apparently, as I planned it this way, to wake up, one day, when the timing was right, and when the conditions were right, and then announce to every one, 'Hey. I have a new religion, and it is my final religion, and we are going to practice it, regardless of what these Dhourties think they are doing, and we are going to get our universe, all straightened out, with our working for me, that is for me, John Ayres, and at the same time, for me, John Ayres, GOD. Get it. I am GOD, but I am also, John Ayres. You are going to work for me, but you are working for me, and for me, and what does that mean?

It means, my brain and I am inseparable. I may not look like GOD, I may be weak, skinny, a little fat around the waist, and I may be losing my hair, thanks to the petroleum animals, and thanks to the Dhourties, and thanks to my karma, but I planned it this way, so that we would get a new, fresh start, as I begin to tell people about my new religion, and as people begin to practice my new religion, with one and each other.

In any case, we have a lot of graves to dig up, and we have a lot of bodies to place into morgue and funeral parlor incinerators, for a fast burn. We can also use any kind of fire wood, to burn the bodies of those who are in a state of limited capabilities. People might call them zombies, but that's foolish, as they are just sleeping, and they wake now and then, in a shadow cast slumbering state of mind.

Some of you might be afraid to handle this, as you christians, jews, muslims, buddhists, and others have been brain washed into thinking that there is something scary about graves and grave yards, and buried bodies in the ground. All the TV programming the Lesbianists bombard people with to disinform them, and with all the folk lore nonsense, the Dhourties have cleverly tricked almost all of the Dualdigers into believing the nonsense the Dhourties shovel out that is aimed at

disinforming and confusing the Dualdigers.

We have to dig up our old friends and family members, and then place them in funeral parlor creamtoriums, or morgue creamatoriums, to burn them to ashes, so that they, and all the organs animals who work for me, can get to my Epcot Center for them, if they need to get to one, as some of them are fine, and do not need to check in, but once or twice, or three times, maybe, every few billion or more years. Human beings, some times, are okay, for their next go around, and they just hang out, else where, without going in to my Epcot Center, for the full treatment for over hauling them, and for making them as good as new. Lots of animals, and people, get to just hang out, in places, other than in the Epcot Centers, and when it is time to go to be born as a tummy baby, my kids get them and fix them up, and get them ready for their jumping into a fetal baby body, inside the womb of a woman who has been impregnated in her ovary capsule, with the male sperm bunny, which I've explained about, before.

Where do people and others hang out, by the way? That's the first I've heard about that? I don't know, for sure, but it is some where other than at the Epcot Center. I have a lot of places for people to hang out, and I'm not sure where these people, and these worker animal kids of mine, go, between lives.

I'll have to let you know, some time, when my memories are better. Any way, it is not on this planet, but it is on the tippy tippy toe of my little little nose. That's child's speak, for, they are hiding every where. Well, that being said, I guess we can worry about finding them, later, as they do not seem to be in any immediate danger, and they seem to me to be okay, so far as I can see it. There is no such thing as ghosts, by the way, and the notion of it, is nonsense. There are no 'spirits' either, despite the television programing you see on TV, on cable TV, with the A&E cable TV host, Bill Kurtis, and others like him, always talking about haunted this, and haunted that.

The Dhourties have cleverly goof balled all of us dualdigers, into believing in the bunk, and trash, or nonsense stories they made up to keep us in line, and to keep them in business as the 'masters' of others.

They are all greedy people, and they are also, demented, if they think they can rule others, and get away with the things they do.

We are going to dig up our friends, and family members, and empty out our grave yards of all the bodies of so-called 'deceased persons', which is a word that is for the most part, untrue, unless you happen to see only bones in the coffin.

The dhourties had better let us do this, because we want our former friends and family members, former spouses, and former relatives, etc., to get out of their useless bodies, and back out into the waiting line, for a ticket out to a new birth, as a tummy baby in the

tummy of a tummy mommie.

We can not let our friends and other important people, such as our mom and dad, brothers, sisters, relatives, school teachers, and others, sit or lie in their coffin, in the ground, in a shadow cast slumber state of low brain activity. It must be awful, when you think about it, and I'm sure it is not a nice thing to be kept in a coffin, with worms and maggots, eating up your body, and you not being able to do any thing about your situation.

I see we have found another way the Dhourties are torturing us, or at least, torturing our friends and family members, relatives, and others, who made it to the morgue, or funeral parlor.

It's not a funny situation, but it is a scary one, as no one in the government will cooperate with me, apparently, and no one in the government, no Dhourty, any way, will cooperate with you, either, I suspect.

Well, be that as it may, I think it is time we did our home work, and did a little research, and did some experiments, and after the brainally gifted and talented persons among you figure out how to measure brain activities at very minimal amperages, and when they have gotten their tools for studying sciences, such as better microscopes, better telescopes, better listening devices, better biometrics detection devices for measuring pulse, gasses exchanges, movement of fluids through tiny, narrow cavities, or tubes, or holes, or pipelines, such as through blood vessels, and through the blood vessels of the organ animals, temperatures at spot locations, types of fluids without actually taking, for example, direct blood samples from a person's body, brain ignition points, or the points you need to be able to detect, to measure for brain activities that are very minimal, and that occur, once, only one hundred years, or less, for example, which will indicate if a person, or if an organ animal is alive, and other types of measuring devices for detecting various energies types, amounts of energies, flow rates of energies, energies physical characteristics, and so forth, the Dhourties prevent the Dualdigers from experimenting with, developing, manufacturing, and using, then they, the brainally gifted and talented scientists, lab technicians, home hobbyists, and other person with various talents who excelled in school, can begin to verify whether what I am saying, is true or not.

Bodies, Bodies, Every Where, Our Old Friends, Family Members, Spouses, And Others, Living, Present In My Universe, But, Where?

The Dhourities, that is, the Lesbianists, have been active in my universe, a long time. They have been pulling these tricks on people, from nearly the begining of their activities in my universe, I suspect. If that is the case, how many people do we have, on old bits and pieces of planets, that have met with various collisions with other planets, in tombs, and in air tight coffins made of highly durable and long lasting materials, that are still fine, and in tact.

How many people are there, who are not dead, but are frozen, living, though with very little activity going on, in clumps of dirt, hiding in layers of earth, compacted, and tight, like floating frozen caskets, drifting around in space.

How many corpses, all living people, though not living too well, do we have, that are our old friends, we have long since forgotten. The Dhourties can tell you, I am sure, and so can the computers data bases, the Dhourties have access to. The Dhourties in the sexaling for a living programs, who are still active, which is one hundred percent of them - though some may be not in good standing, and those not in good standing, may no longer have access to computer terminals that they used to use, to find out what the scores are - all have computer access, rights and priveleges. If you can convince one or more of them, to cooperate with you, and find out the data on this, you will get an idea as to how many people there are who have not checked in to my Epcot Center, recently, and who are still present yet, unaccounted for.

You will also get an idea as to where many of my kids are hiding, and they are not on the 'tippy tippy tip toes, of my tiny kids' little little noses'. That means, they are not on the noses of the tiny worker animals of mine, that are too small for scientists and lab technicians to see, given the present level of technologies, in the investigative, and other laboratory sciences.

This is a wake up call for all of you to get busy, so we can over throw these Lesbianists/Dhourties, as soon as possible, so that we can begin life, and living, forever, with a fresh, new start, and with all of our friends, family members, and others, present and accounted for.

Those of you who are gifted in the munitions side of things, may get to work, immediately. Those of you women and girls, who have the brains in your head, that I am telling you that you have, had better begin to convince the men and boys in your lives, that there is a problem, that needs their attention. If they are not willing to assist you, maybe you can find other men and boys, as well as other brainally capable women and girls, who will be willing to assist you.

What Is High Blood Pressure?

High blood pressure results due to a number of reasons, but, one of the reasons is you get poisoned by stricknine, arsenic, cyanide, and other poisons in your food, or beverages.

These poisons can be found in iodized salt, pepper, mayonaise, ketchup, mustard, dijon mustard, processed ham, processed meats, pork sausage, animal meat sausage used in 'Dim Sum' or Chinese style sandwhichs, pot stickers, won ton, hot dogs, wieners, pepperoni, pizza, jellies, jams, candy, cakes, pies, chocolate, peanuts, white sugar, white flour, white rice, white bread, tap water, bottled water, 'mountain spring water', milk, yogurt, cheeses, cottage cheese, preserved fish such as salmon, crackers, breads, pastries, and other

foods.

These poisons can also be found in tiny amounts in preservatives. They can also be found in every food additive or beverage additive that the Lesbianists regulate and require food manufacturers to add to foods, beverages, condiments, and other items that you use in your diet, and for your health.

Medicines contain these poisons, in trace amounts, and so do all items sold in pharmacies, and in drug stores, and in sundry products stores, convenience stores, and so forth.

If you ingest too much of these poisons, accidentally, of course, in your diet, you begin to experience the symptoms of so called 'high blood pressure'.

It is peculiar, or bizarre, that the Lesbianists blame salt as the cause for high blood pressure, when it is they, the Lesbianists, who are poisoning every thing you eat, drink, or take for your diet and health.

These poisons can also be found in your laundry detergent, play ground sand box sand, fertilizers, Ortho Grow, iodine, witch hazel, rubbing alchohol, ethyl propyl alchohol or vinegar, and in all manufactured liqours, wines, beers, and all other Dhourty brewed beverage or licensed for brewering beverages, as well as in their pipe tobaco, chewing tobaco, cigars, and cigarets.

They can also be found in your home improvement products, such as in paint, putty, plaster, wall board, wall paper, ceiling tiles, floor tiles, plastics, synthetic fibers and in even natural fibers that have all been chemically treated, for clothing, bedding, curtains, carpets, couch and sofa cloth materials, naugahide car or auto seat covers, and any thing such as nylon, rayon, polyester, or other petro chemical industry related, or chemical industry related manufactured and produced product.

Every thing you touch, even the steel bars on jail cells, automobile body metals, roofing tiles, house sideing coverings, bricks, cinder blocks, mortar, cement, sand, gravel, wood treatment products, glues, Elmer's glue, pen ink, pencil led, mascara, lip stick, face powder, under arm deodarant, soaps, shampoos, and so forth, every thing you can think of that is a manufactured item, or that is an item the Lesbianists have had any connection with the manufacturing of, they all have these and other poisons in them.

Why do the Lesbianists poison every thing? To make your life miserable. I've also explained before, several reasons for why the Lesbianists act the way they do.

Litter, Bodies, Body Parts, Brains, Brains Parts Scattered Everywhere

Every rock, every sand partical, every grain of earth and dust, on this planet and in my universe, carries these poisons animals along with them. The Lesbianists have been up to their mischief, for so long in my universe, they have spread their poisons animals friends thouroughly throughout every cubic inch of territory in my universe, repeatedly.

I have lots of very tiny animals, and every one of them is feeding on even tinier animals. How small do you think the animals are in the poisons that the Lesbianists use?

If we consider that there are 600 million cosms from our living environment down to the so called, molecular level living environment, as I've explained about, previously, and from there, if you consider the 900 billion cosms, or living environments, down to the very difficult to live in, cosms, that are not very populated, below the 900 billion cosms, there are animals either related to these poisons animals, or cousins of these poisons animals, or descendants of these poisons animals, or incendants of these poisons animals or preceeding family members on the family lineage line, living in each of the total 900 billion, 600 million cosms, and even down below those. Incendents are those who come before us, or before some one else, or before a particular plant, or animal. Lots of your family members, your incendants, are still out in our universe, floating around, drifting around, and they have not yet checked into the Epcot Center, or other facility I use for having people get checked and marked, and then data with regards to their life and actvities is recorded and stored.

Marked means, we check them in, and we make sure every thing is doing well, or kosher, in their lives, and that nothing is out of order, or in any way abnormally out of balance, and so forth, in their lives. It's a karmic markups checking station proceedure, and we check for many other things, as well as karmic markups, such as the body condition, the health condition, the animals organs conditions, and many other miscellaneous things.

In other words, any way you look at it, nearly every living environement that we can find my worker animals in, just about every environment has been tainted with these poisons animals, or other poisons animals released by the Lesbianists. That means, that every thing you touch has poisons in it.

ARE YOU LISTENING TO ME SOLDIER? GOOD!

In any event, there is just about nearly nothing in my universe, that does not have in it, the poisons animals that the Lesbianists have released into my universe. My universe is thouroughly saturated, from one end to the other, and from top to bottom with the trash, garbage, poisons of the Lesbianists.

The present, yet missing and unaccounted for, former friends, lovers, parents, family members, and others, can be found, as well, from one end of my universe, to the other, from one side to the other side,

from front to back, and from top to bottom.

My universe was originally much larger than it is now, as I've mentioned about, before. Some of the areas outside our universe, in the areas beyond the boundaries walls, may not be as densely contaminated and littered with the bodies of the lost and missing, present yet unaccounted for, friends, lovers, family, and so on, as other areas, but much of that area, is littered with the debris and rubble of the antics of the Lesbianists, and as well, by the present, living, yet unaccounted for brains, bodies, or brains and bodies of your old time friends, family members, and others, who have not yet checked in.

Karmic Energies

Every one has karmic energies. Karmic energies tell us the health and mental status, as well as the life status, and many other statuses, about the person whose karmic energies we are in the process of checking.

Our checking stations checks on a persons karmic energies, and each person is given an update, on who that person's karmic energies are.

Each person has his or her own unique pattern of karmic energies. Some people may have similar karmic energies patterns, but they are never identical, and there are dissimilarities every where, as well, even in person's karmic energies patterns that seem relatively similar to some one else's karmic energy patterns.

Why is this important to know about? When we first came out here, into my universe, we were all very holy, pure, and unblemished, and our karmic energies patterns were all pretty much the same. We all shared a wide variety of interests with each other. We slowly, over time, became less and less simllar, as our behavior began to determine a rise in a difference in a karmic pattern that was peculiar, or unique to ourselves, and different from all other persons' karmic patterns.

This leads to incompatibilities between people. It also leads to trouble, and distractions of many kinds. Over time, people begin to become more and more diverse, and they share fewer and fewer interests in common with each other, because of the differences in karmic energies patterns that arise over time.

We presently have such diverse karmic energies patterns, that it is a fictional notion that there is a mister right guy waiting for me, if you are a girl, or a ms. right girl waiting for me, some where, if you are a boy.

Love and romance notions such as these, are fictional, and are not in any way associated or based on principles with regards to the realities of our lives, and to the realities of our associations with others.

There is no perfect family for some one, and there is no perfect home life for some one, or for some group of people. Every one has such diverse karmic energies patterns, it is a wonder there is any one even talking to each other, is another way of looking at it. It may sound a stretch to say that, or as if it is some thing made up, but it is true.

How come we do have friends, if this is true, I have to ask?

There are karmic associations in every one's life, and those karmic associations pull people together to and with each other. Those people can not escape from their karmic associations with each other, and they all go happily down the trail, until some one drops off, or is shoved off, and does not return, or until some one gets pulled away, off into another direction, due to a stronger or heavier karmic association with some one else, or with some other persons.

There fore, what? There fore, you are all stuck together, and glued together, and you are not going to escape from one and another, and where ever we left some one off, at a bus terminal for the missing in action, present yet not accounted for, we will eventually pick up each and every one of our missing passengers, as we recover my universe from its current distress. Current distress means, the present distressing situation. It might also refer to the over whelming misery of every one in my universe, who is together, sharing this karmic distress with each other, despite what it might look like, on the outside of our lives, in our every day lives, family lives, work lives, and so on.

This means, no matter how much you may wish some one else where not around you, and no matter how much you wish that there was a way to eliminate the problem of a pesky person, or a group of pesky persons, there is no possibily of ever, in the near to distant future, relatively distant future, anyway, of ever releasing some one from a karmic association with you, if that karmic association is strong enough.

That means, the people around you, the people that you see from day to day, the people that you see on the city streets living in your neighborhood areas, the people that you see living on your planet, the people that you see in the movies, or on television, or in the temple, or churches, or in the synagogues, or in the wars between countries, no matter who they are, all of them have karmic associations with each other, and no matter how many times you destroy each other, it is only after a very long period of time, that the karmic energies patterns, and the karmic energies bonds, or bondings, and the karmic energies associations, that are a part of the karmic energies bonds, and patterns, as well, will slowly diminish, or change hue, color, form, texture, amperage, wave signatures - which is a high level concept or understanding you can learn about, from some one else, as it is too long to explain, and too difficult to explain about for me - or other characteristics.

People go around killing each other, thinking they will get rid of each other, and they are only fooling them selves. They can no more get rid of some one they are karmically bonded with, than can they get rid of their thumb, elbow, jaw, neck, and so on. You can not be born with out all the basic requirements, generally speaking, unless your karmic energies patterns determines that your form be such.

These Lesbianists get a kick out of tearing people apart, piece by piece, and they get a kick out of torturing people. They generally dislike every one, including people in their own organization. That is normal, given the fact that every one is so dissimilar in karmic energies patterns, and in karmic energies this's and that's, i.e., karmic energies tings and dings. They dislike every one in their organization, and they even dislike themselves, as they know they are really messed up, karmically, and they are not happy with how they feel.

When you are not happy with how you feel, you go around blaming other people for your problems, often, and you are unable to see it is not in other people, so much, in some instances, but it is in you, your self, that there is a problem, and you sense that problem, but in your brain, you are not ready to recognize that problem, for one reason or for another.

Anyway, we can say, we all hate each other, and we all hate ourselves, as well, and that is not a lie, and that is not fiction, but that is fact, and that is something that you are all going to have to learn about, and accept, as you begin to prepare your selves, for working in my universe, for ever, with each other.

Do you understand this? I wonder. Not many people will want to believe this is true, but it is true, and until you understand that it is true, you will not want to believe it is true. If you do not want to understand or believe that it is true, than you will simply not understand or believe that it is true.

It is very simple, isn't it. In any case, you are stuck with each other, and until we force these Lesbianists to give up their game, we have a hard war to finish, until we have defeated them, entirely.

That means, it is alright to kill and destroy as many of the Lesbianists as you like, and it is okay to toruture, or threaten with torture, as many of them as you like.

DO YOU UNDERSTAND THIS, SOLDIER? I HOPE SO, BECAUSE I AM NOT GOING TO REPEAT MYSELF!

We are in a war with these Lesbianists, the Dhourities, and until every last one of them is either killed and sent to my Epcot Center or to one of my checking stations, or until they give up, and surrender, and apply to repleat, there will be no cessation in hostilities, by me, against them, and if you are on my side, there will be no cessation of hostilities, by you, either, unless you are just simply tired of fighting them, and you need a break.

Those of you who do not wish to fight, had better move out of the way, as you will, or might, become a casualty of war.

IS THAT UNDERSTOOD, MATE? I HOPE SO, AS I AM NOT GOING TO REPEAT MYSELF!

A War Deaf Hero

A mate is a war deaf hero. A war deaf hero is a coward, and a non combatant. War deaf heros, are chickens, and they only go around acting tough, and speaking tough, and when it comes to getting their asses burned, in a pinch, they are going to go, buck, buck, buck, buck, I don't know why I am doing this. I do not want to do this. I want out of this. Let me out of this. Please let me out of this, and they begin to pee in their pants, and then run and hide.

Do you see what I am saying. I suspect some of you do. This is going to be a serious confrontation, and a lot of people are going to die.

Now, if you are not man enough, or not woman enough to handle this, than go and run for the mountains, as we do not want to find your body among the walking wounded, or partially missing in action, or among the lists of missing in action.

Do you see what I am saying? I think there are a lot of people who are not happy with the present circumstances, and until we find a way to resolve this, you are not going to interfere with my plans, as I am GOD, and I am not going to let you interefere.

That means, it is okay to kill you, and it is okay to leave your sorry ass in the bushes, amoung the wounded, and soon to be dead.

HAVE YOU GOT IT YET? I HOPE YOU DO, MATE, BECAUSE I AM NOT GOING TO REPEAT MYASELF FOR YOU, AGAIN. YOU ARE GOING TO DIE, IF YOU DO NOT WISH TO PARTICIPATE, IS ANOTHER WAY OF SAYING IT, AS WE WILL NOT GIVE A SHIT IF YOU ARE WARNED IN ADVANCE OR NOT OF A COMING ATTACK ON AN ENEMY POSITION.

That means, if you get your ass blown to shit, than that is your problem, not mine, and not any body elses.

You are all my kids, and you are all stuck and glued together with each other, and you can not get rid of each other, permanently, for a very long time, so in the mean time, if you happen to experience a failure, such as your body and limbs are shattered to pieces in a very large explosion, than that is just too bad, isn't it.

Well, I hope you will understand the reality of the situation, by now, and if you do not, then there is no hope for you, and we will be seeing you after we are finished blowing and exploding the shit out of the Lesbianists' defensive positions.

I do not have to make my self clear on that one, as I have listed many of them, repeatedly. Now if you are willing to fight, you will see your loved ones, again, no matter what happens, and that is a certain

fact. There may be persons, who have lost a friend, or a family member, already, but the worst of this is yet to come, as we are far from reaching an agreeement with the Lesbianists for a one two three strike, you're it, annoucement. That means, a one, two, three, and if you do not answer me with a "Yes! I will surrender!", than that is it, and you will have your brains blown out of your head, into fifty million pieces. In other words, until the Lesbianists give up, and surrender, every single one of them, than this war will continue, until the last Lesbianist to surrender or die, is accounted for.

Huuuup Toooittt!

That means, get your action loaded, and get out of your bunks, and beds, and get out of your trousers, and get yourselves moving, sexaling with each other.

What is an action? It is your dick or vagina. To load an action, means to get your dicks up, and get your vaginas up, and ready for combat, or sexaling with each other.

That is an order to my combat troops who are preparing with their men, women, girls, and boys, who are all fighting in this war with us.

That's a strange order, isn't it.

No, not really, as I've already told you how we are going to win this war.

Now. We have a game plan, a war plan, as I've already related to you, on the bulletin board, where you can read my notes. Please follow it, and when you are ready, please take action.

Now, get to your posts, and get ready for war. It is going to be a long one, and it will take us a while to wipe out the enemy. They are every where in my universe, nearly, and we have a lot of people to kill, and account for. Unless they surrender, they face execution, either by me, or by one of my soldiers.

When I say by me, I mean, I will some how manage to get that person killed or put out of commision, and out of the way, due to infirmry, such as a broken body, broken head, tortured body, or tortured, brain. It does not matter how we kill them and how we get them to surrender. We will get them to surrender, all of them, eventually.

CARRY ON!

That means, to my soldiers in the field, or in their tents listening to me, my soldiers know that we mean business, and they know we are not finished with this campaign to get the Lesbianists to halt their activities, immediately, and it is now time to continue with your planning and strategies activities, and events.

DISMISSED!

Captain Off The Bridge.

Experimenting On Dhourties Updated: 09-09-07 Rev.x 20:00 PDT

If you can find a Dhourty, you can make a nice living arrangement for the person. Then, over a period of three to eight weeks, or so, feed the person, him or her, a bottle of home brewed rum, or home brewed tequila, or whatever your favorite home brew is, and it should be mildly strong, and not lukid, or weak and diluted for a child, for instance. It should be mildly strong, and that means, at or above the normal proof for what you find in a typical Savon's Drug Store, or Alchohol And Beverages Control Shop, where the government has people selling booze under the governments watchful 'eyes', an ABC store, as they were known, in Virginia.

Home brew should not have any of the poisons brews, the varieties of brew the Lesbianists make, that are made from ferment methods that involve using petrochemicals, such as for making rubbing alchohol, witch hazel, and ethylpropyl alchohol, which you may find mixed in with vinegar, from time to time. You do not want to use any thing with these types of alchohol in them, and so make your home brew with normal vinegar, which is made from soury fruits, and ocean salt, a little raw sugar, with something to ferment in it, such as berries, or leaves or flowers from an interesting plant, or other such similar things, as I've explained, before.

After several months, you should have some thing that is useful, and I've written a little bit about this, before.

Banana pulp, fresh chili peppers, oranges, potatoes, purple potatoes if you can find them, all spice berries a small amount, and sugar, salt, water, soury vinegar will make a nice and powerful brew, and be careful with it, as it can be very powerful. It can go nearly off the scale for 'proofs', but do not worry, as there are lots of animals in it, that survive, and so if you are careful you will survive too, though you may feel a little woozy, now and then, if you drink too much, at once. It's very good for cleaning out the tummy, and the body, and other organs in the body of some types of nasty animals, and the organs animals they love it.

With several nicely fermented brews, force feed the Dhourty, about a cup an hour, if you can, or build up to it, and then continue to force feed the person, for several weeks, about eight and a half weeks, should be enough time. You can tell if you have fed the person enough brew, in addition to light snacks, now and then, for normal nutritional needs, when the person's pee begins to smell of the brew that you are feeding the person. The person will begin to leak fluids

out of his 'pores', or the openings and ports that the organ animals exhale through, pee through, poop through, and inhale through, etc.

When the person begins to smell of the brew, also on the surfaces of his or her skin, and it should be very clearly distinct, and any body with a nose, should be able to detect it, the odors of brew on the surface of the person's skin, and in the person's naval, and in the person's, butt hole, and in the person's pee hole, and if the person is a woman, in the person's vagina, and in the person's lactate juices.

When the person has sufficiently swallowed brew for several weeks, and when the person smells overly filled with brew, even after taking a nice shower, the odoor should be almost immediately apparent on the surfaces of the person's body, then the person is ready for a test trial.

You can take the person, and saw the person in half, and the top half will continue to be connected to the bottom half.

A person's leg can be sawed off, as carefully as possible to keep nerve animals from being ripped apart, and to keep other animals from being ripped apart, and so you want to do it, surgically, and be as careful as possible.

When you have the leg sawed off, then tickle the foot, or toes, and the person will feel you tickling him or her.

The connections stay connected, despite the fact that you have sawed off the limb. This gives us the possibility for many interesting experiments.

You can grind up the person's leg, in a meat grinder, and keep all the ground up materials in a beaker of brew. Next, tickle the foot, or toes, and the person will still feel you tickling him or her, and the person will begin to laugh, after the person recovers from the pains of having his or her leg ground up in a meat grinder.

So, if you use your imagination, you can come up with all kinds of experiments to have hours of fun and enjoyment with, while learning how these things work.

Some times, an organ animal, may die in the process, and the connection might be lost, to some extent. However, if you keep the leg wrapped in a cotton towel, and pour brew with molds nutrients of one type or another, in with the brew, with salt, and extra sugar, and a little cream, you can feed the organs animals, and they will happily reproduce for you, a replacement organ animal, for the one, or ones that were accidentally lost, i.e., the one's who accidentally died, and then went on to their next job assignment.

This experiment may be practiced on parrots, dogs, cats, lizzards, canaries, and so forth, until you have gotten the hang of it. Once

you've gotten the hang of it, then use your imagination, and see if you can't get a dhourty to become friends with you, and give up his or her affiliation with the Lesbianists, and then, come on over to your side, to cooperate with you. If you experiment on enough Dhourties, you will eventually find some people, who will wish to sign a statement denouncing their organization, renouncing their codes books rules and regulations, etc., and terminating their affiliation with their organization. Once they swear to terminate their affiliation, and once they swear to leave their organization, and then swear to assist you and all other Dualdigers, normal people who can remember their birthday, within the last one hundred and thirty or so years, at max, generally, then you should be started towards having a good relationship, with a few former Dhourties, now that they have changed sides, and joined our side, the Dualdigers' side. I explained a little about how we got the name dualdigers, but there are other meanings to it, as well, and you can ask your dhourty friends for a fuller explanation.

Once you have some 'former dhourties' on your team, you can ask them for a better explanation, and better proceedural methods, for experimenting and for having lots of fun.

Invite your 'dualdiger' neighbors, and your 'former dhourty' friends, in for the experiments, and see if you can't all have a good time, having lots of fun, exeprimenting on your new 'dhourty' guests, all the time, and see if your 'former dhourty' friends know some other interesting experiments they can teach you, that will widen your and your friends understanding of how things actually work with regards to the human body, and brains, etc.

Organ Animals Updated: 29-09-07 Rev.x 18:38 PDT

When you develop your body's health, and start to bring back your body to an online status, with all the organ animals being fed regularly inside of your body, with the foods you select that are good for them, and that will nurture them, as well as you, as I've explained about, a little, on my bulletin board, you will begin to feel some or another of them pumping, a little here, or a little there, or a little over here, and so forth.

You might feel them in your feet, or in the arch of your foot, or in the side of your leg, or in the side of your body, and in the side of your chest, as you lie down, on your side, or in your bun bun, that is your butty butt, or in your tummy, and so forth. You might sit quietly, after a few months of feeding them, and see if they are moving or not.

If you concentrate, on a specific part of your body, that you feel may be moving, or seeming to move, it may start to pulse, stronglier and stronglier, a little at a time.

This is your organ animals excercising methods. They will pulse, and pulse, and pump and pump, and this is how they get their excercise. They are in fact, orgasming.

It sounds funny, but it is true. Your heart pulses, and that is, it orgasms, constantly, or at a constant rate, more or less, even though it picks up when we excercise, harder, and run, and jog, and so forth. So will all these organ animals, one by one, as they come on line, and get into business, they will all begin to pump, or orgasm, living in your body, as you feed them the foods they like to eat.

It sounds very peculiar to most people, perhaps, that we have a body that has animals living inside of it, pumping, and orgasming.

Well, after a while you will get used to it, that you have organ animals inside of you, and in time, maybe few years, to more than a few decades, or so, you will slowly accept the fact that they are in side of your body, and that they are feeling good, and that they are pulsing, and that they are living inside of you.

So long as you feed them the foods that they like to eat, the molds from breads, and from milk you mold up at room temperature with some of your nicer and more useful molds, and from yogurted milk, and from your own cream cheese with new molds to help the cream cheese that you buy in the store and remold up at room temperature in your home, and from cottage cheeses made from scrap or from a container of cottage cheese from the store, that you strain the curds of the creamy but useless and poisoned liquids out, and after you have strained them in water, put them in milk and add some heavy whipping cream and with a number of good, useful molds, you make your self some nicer cottage cheese than they will sell to you in the store, and add some ocean salt and raw sugar to the milks, and bananas are good too, as they help kill the stricknine animals, and the arsenic animals, and the cyanide animals in the milk, make up molded cheeses and feed them to your organs animals, and feed them the brews that you make, with expert help of course, and eventually, you'll get lots of animals all well fed inside of your body.

If you do not know how to do this, without getting your self ill, you may suddenly stop breathing, and you may end up in a morgue, to find your self tagged as 'deceased', and then you might get up to find them waiting there, in the lunch room, with a knife, ready to kill you, before you can escape the morgue, to tell the news papers - a foolish idea - that you came back to life after dying, and you found your self in the morgue, tagged as 'deceased'.

Well, any way, funny things will happen, but do not kill your self by eating the molds that you are not supposed to eat, and that are not suitable for eating, such as stricknine loaded molds, and cyanide and arsenic loaded molds, and other such molds that will also put you in a state of slumber, with out your heart beating, and without your brain very active.

Your animals inside of you, will come to your rescue, because they do not die, even if you stop breathing and pass out.

They will generate enough gasses to awaken your silly self, if you ate some thing that is not good for you, after they clear it from your body, and then rescue you. They all have hearts, and just because your heart stopped, and just because your brain activity went very low, their's did not. They are alive and well, and you will be rescued, if you are waiting, undisturbed, long enough.

It is not a good idea to experiment on your self, and so use a dhourty friend, you've captured, and are in the process of training to be a sexaling slave, or use a pig, police officer, fire department worker who is a dhourty as not all are, but most are, morgue worker, hospital mortician, city mayor, congress men, congress woman, vice president, president, parliamentary member, prime minister, or other animal.

I did many home study courses in electronics from CEI, National Radio Institute, etc., in order to build and maintain my stations in Ecuador. I have had an FCC First Class License (now General) for nearly four decades.

I had thought in the past that they had used a pretty much fixed antenna aimed
at Ascension, as it was an utility transmitter that they were using at the time.

Records seem to indicate you received the FCC license in 1974 using the name
"David Frackelton Gleason".

Wrong. I received it in 1969 at the FCC offices on M Street in DC.

Good grief, is it possible that this guy's been caught in yet ANOTHER
lie?
```

Tardo, you might want to try telling the truth. Your attempts at deception just aren't working for you.

Really? Well, after looking at records I have in hand, and now checking your website I see that you indeed have the original certificate there (dated 1974). And right above that it states "1970. The economic situation in Ecuador looked to be rapidly deteriorating, with runaway inflation, currency controls and shortages of everything. For 6 months, I lived in Washington, D.C. while preparing for the F.C.C. First Class Radiotelephone operatorï¿½s license."

So, which is correct? You lived in Washington for 6 months (in 1970) preparing for a test that you didn't pass until 1974? (And mind you, there is no mention on your website of obtaining an FCC license in 1969).

Somehow I don't think that the FCC is lying to me!

Great! You should be very happy with the radio, as long as you use an external speaker other than the JRC one, it's not very good. The KIWA ultimate rejection kit is worth getting and doing too.

That paint is used for shield small plastic cases, not walls, though
it is available as a brus hon product. My comment is the ferrous
shielding is more effective. This again goes back to E&M,but my
recollection is a non-ferous shield only stops E, not H. A ferrous
shield, being electrically conductive as well, stops both fields.
Like I said, E&M is not my field of specialty, just my 2 cents.

If the aluminum is more than skin depth thick, I don't think you will
get much H-wave penetration. The moving field induces a current in the
conductor that will cancel it.

The 1974 license on my website is a RENEWAL. In fact, until the 70's, the
old license was not returned. If this bothers you so much, write to the FCC.

> 1974).

When I got the renewal in 1979 of the 1974 license, also a renewal, the FCC had begun to cancel and return the old license, just like they do with passports. The original issue, if we count back, could have been late '69 or early '70... it was normal to submit a renewal application quite a few months in advance. And that is all we are dealing with... was it the last month or two of one year or the first month or two of another.

The fact is, when things got sticky in Ecuador, I traveled many times to the US, even to Pocatello, ID, where I interviewed with Dan Libeg at a Top 40 station there. Since station owners have nearly unlimited air travel and due bills, it was easy to go and find out what might be available. I even interviewed in Mexico City with ORC and Acir...

You sure get into an uproar over a matter of months, something that does not change the fact I had a 1st ticket... demonstrating I passed the FCC set of three exams.

Yeah, it was either late 69 or early 1970 when I got the first license. I
don't think that the day and month matter at all...
>
> So, which is correct? You lived in Washington for 6 months (in 1970)

So? It may have been late 69 or early 70. I really have no precise
recollection.... the date is somewhere in that vicinity. What, really, is a
couple of months? If it matters so to you, ask the FCC.

The authorization, which was not a license certificate, but an "oficio" was
in '66 or '67.

Source record: 127600

So this won't get lost in a silly thread, I thought it might be useful
to others
to have real data on "Skin Effect" for RF.
<http://www.microwaves101.com/encyclopedia/skindepth.cfm>
<http://www.rfcafe.com/references/electrical/skin_depth.htm>
<http://www.rfcafe.com/references/electrical/cond_high_freq.htm>

The first link has a very nice graph that shows how rapidly skin
depth
decreases with frequency.

The lab I worked at had walls of 1/8" copper mesh that looked to be
about 22AWG. I thought of measuring it, but decided I didn't want to
risk damaging it. I sure couldn't afford to replace a section!

1/4" rat wire will work up to at least 150MHz.

And any openings in the walls must be less then 1/10 the highest
frequencies wavelength for protection against very high RF fields,
such as EMP, NEMP, HEMP etc.

If anyone is bored enough we have a very nice flame war going on
in alt.survival. Given that we are arguing over science and unknowns,
I feel somewhat like a theologian arguing about "how many angels can
dance on the head of a needle."

Guess that's why it never shows up anywhere! "oficio" must mean "faux".

I'm LMFAO you f00kin fake!.

I also want to say thank you for all your effort and the sharing of
this information. I think a low RF noise enviornment is more
important than the receiver used, much like a poor antenna will make a
$2000 radio perform almost no better than a $200 one.

For a little over a year I had an AOR7030+ to store for a friend.
A great receiver with a great selection of filters, but a PITA menu
system.
I also own a R390 and had a Drake R8B for a few months.

At my location, even after all my noise mitigation efforts, the 3
great receivers
were not significantly better at digging out the weak one. True the
filters and
superior front end, lower phase noise and better detectors made
listening
a lot easier and more fun, but at the end of the day my R2000 could
hear

better then99% of what the other three could.

Even my lowly DX398 could hear about 95% of what the best could.

Don't get me wrong, as soon as I can I will upgrade to a R8B and with luck
a 7030+. SDR's are improving so fast that may divert me, but I think I will
stick with conventional for a while longer.

The R2000 is rated by Sherwood labs as having ~-127dBm sensitivity.
The best I have seen the noise floor around here was during an ice
storm 14 years ago when I had 2 days of SW bliss. The noise floor
was around -110. So even then I had 17 dB of gain that I couldn't use.

Of course the better radios are much better at picking one signal in a
crowded situation. The R2000 suffers from pretty poor close signal
separation. For 2 signals of roughly the same strength it isn't an issue,
but when the unwanted signal is more then about 3 times strong as
the desired signal, the R2000 has very tough time picking it out.

The R8B and 7020+ are great. The R390 is better. But the R390 is no
fun to rapidly tune from one frequency to a very different frequency in
a hurry.

Since I was chief operator of WUNO from late '70 to mid-'72, and that requires not only a 1st ticket but notification of the Engineer in Charge of the FCC field office, there is, no doubt, somewhere record of it.

An "oficio" is basically an "edict" and is a folio with fiscal stamps and a
notification text.
```

Sounds like you are mainly interested in the program
material and not the radio aspect. If that is the case
I would suggest connecting to the live feed on their
web sites.

simple copper screen (like screen door stuff) properly bonded and grounded
would do the trick nicely.

cement is partially effective (you need truckloads to do any good though)
and don't even talk about lead (the EPA would have you for lunch).

lets see, copper screen (.05 inch thick) completely around the room (plus
ceiling) properly grounded = 99% effective

cement: 1 foot thick, <10%
Lead? not sure

They would not and since when is Idaho, Wisconsin, Arizona or Alabama
in south America?

> And why would it be more expensive to do in Central and South
> America? I can see no logic in any of this set of statements.

Where did I say it was more expensive in SA? The logic is why spend
money you don't have to spend. The problem looks to be reading
comprehension.

I don't have that book so I can't do that but general theory would
indicate otherwise and there are companies that offer tower kits to
improve bandwidth performance as I have described.

Again that is not my understanding of tower VSWR. The levels at 5, 10,
and 15 KHz are much higher than you indicate, which requires mitigation
efforts.

> no excursions beyond +/- 10 kHz.

For analog +/- 10 KHz sounds reasonable but it looks like IBOC is
going past that number. The testing recommendation I read suggests
testing to +/- 15 KHz.

> > ATU's that couple the coax transmission line to the tower using a

I don't see how that can be improved. Series feeding the tower will
require a fairly high Q network that is inherently narrow band
compared to a shunt feed method.

I don't see where you keep on this tack about Unipoles as they can just
as easily be part of a directional network.

> >> The FCC no longer authorizes shunt fed towers.

I don't see where a Unipole would present a problem in a directional
network.

That's fine if the coax and transmitter output impedance is 52 ohms. I
didn't realize I was making it more complicated I was just trying to
explain the dynamics of tuning the tower.

An ATU is usually necessary.

Wow, I guess the engineering of the IBOC working group really sucks. I figured something in the way of the application in the field is what would bring things down. This is far worse that I imagined.

I don't see the need to be so defensive about what I posted. I made it clear it was an assumption and explained my logic for those assumptions. The reasoning was technical and there is no need to try to make it into something else.

I asked why South or Central America would have conditions of terrain,
grounding or cost any different than those states? I have no idea why you
think a unipole would be of any greater advantage there than in, say, Lake
City, FL? Why?

In a simple sentence; why would grounding be different than in the US.
Another: why would the terrain be different than in the US?
>
>> And why would it be more expensive to do in Central and South
>> America? I can see no logic in any of this set of statements.
>
> Where did I say it was more expensive in SA?

You said that Latin America is "where (it is) expensive to install..." And
I do not see that it is expensive at all, and where a unipole would be less
expensive.

>The logic is why spend
> money you don't have to spend. The problem looks to be reading
> comprehension.

Importing a unipole kit from the US (nobody makes them or uses them in Latin
America) and bringing in an experiienced installer would be much more
expensive than a simple to build and maintain series fed antenna. Every
nation in Latin America has a local tower fabricator and erector or two.
>

>
> No.

You obviously have not measured may, if any, AM vertical radiators. Untill they get very wide, like the old towers of the 20's and 30's which were built like scaffolding, there is no appreciale benefit in width, and the cost at any optimum point is prohibitative and likely will get no zoning clearance. The problem with bandwidth can be solved by ATU design, and VSWR reduced to less than 1.09 to 1 at 10 kHz with ease.
>

> indicate otherwise and there are companies that offer tower kits to
> improve bandwidth performance as I have described.

The purpose of a unipole is to allow the tower to be at ground potential so we can get point to point and other antenna rentals without isocouplers. It is also to compensate for bad grounds, like where a parking lot and shopping center now sit on the ground system. Bandwidth is mostly enhanced below 1/4 wave, and the FCC only licences such towers under extreme circumstances... very few towers under 90 degrees exist in the US. I've seen a bunch of non-licensed stations, such as AFRTS facilities using them though.... 1040 at Ft. Brook used one to tune a roughly 75 foot tower and it did not sound too dreadful, either. Rame, on 780, used one on a 50 foot tower, also.
>

>> A well tuned tower of 1/4 wave has less than 1.08 to 1 vizwar. And,

The ATU will generally create a 52 ohm match at carrier, and j 0. At plus or minus 10 kHz, we would look for well under 1.1 to 1 VSWR with a good ATU. They can be designed to give even less than that, but considering the amount of entergy under NRSC at 10 kHz is minimal, that is often good enough.
>>
>> A mismatch is generally considered to be a mismatch of impedance

> going past that number. The testing recommendation I read suggests
> testing to +/- 15 KHz.

The stations for which AM HD is even appropriate are major stations in each market only... and most of these have nicely designed antennas. The very directional stations are going to have more problems in the phasor than in the ATU and tower. Phasors have to be a compromise of tunability (High Q) and bandwidth... so the bottleneck is in the phasor, the rest of the system being infinitely more tolerant.

>> Not for the last 40 years or so. High Q was much more common pre-60's

> compared to a shunt feed method.

The kind of network and the network design can make a pretty decent broadbanding within licensed bandwith possible. In any case, you are not going to get a shunt fed tower in the US, and you are not going to get shunt fed directionals anywhere.
>>
>> Since true shunts are no longer licensed, this point is moot. Most US

>
> I don't see where you keep on this tack about Unipoles as they can just
> as easily be part of a directional network.

Shunt fed towers tend to have slight directionality, and unipoles have enormous mechanical instability, making adjusting a unipole directional and meeting licensing requirements something that might not even be possible. And the cost of readjusting as the outriggers move about and the wires strech and age would be huge... most station engineers do not adjust their own directionals... a consulting engineer does, at great cost.

> I don't see where a Unipole would present a problem in a directional
> network.

See above. Mechanical stability is the first issue.
>
>> An ATU is not necessary if the tower is 52 ohms and not reactive,

How many towers have you tuned?

> An ATU is usually necessary.

Always unless there is a perfect match. I chatted with some engineers who
are into this sort of thing, and we came up with one station in the west,
the 1590 in the Victor Valley about two decades ago... it has since moved
and has a doghouse at the tower base, now.

>> That is not why the very few cases of transmitter damage have
>> occured. Most transmitters will simply shut down over reactive or

>
> Wow, I guess the engineering of the IBOC working group really sucks. I
> figured something in the way of the application in the field is what
> would bring things down. This is far worse that I imagined.

iBiquity does not design exciters. In this case, the HD exciter was built by
one of the big three transmitter companies, and it had a "design mismatch"
(read "flaw") when mated to one particular transmitter which they did not
even manufacture. It's the price stations pay for being early on the
curve... which is usual in major markets because, problem and all, such
stations have at least one backup transmitter, and many have two.
>>
>> Or, in today's transmitters, it does neither. It detects VSWR and
>> shuts off.
>
> And all my equipment has fuses or circuit breakers but I usually apply
> effort toward making sure they are not used.

In the case of transmitters, the control circuit performs system shutdown or
power reduction to protect itself without fuses or circuit breakers; a high
VSWR might cause a transmitter to progressively fall back to half power,
half again, and so on until it can operate... or it shuts off.
>>
>> The fact is you have said that shunt feeding is common in Latin
>> America where it is highly uncommon and always has been. You made

> make it into something else.

In that case, I do apologize. I may have mistakenly thought you were one of the multitude that thinks that all of Latin America consists of terrain that can only be found in an Indiana Jones movie; the fact is that the land anywhere there is comparable to some place in the US. Towers tend to cost less, as they are locally fabricated and the labor costs are lower; ATUs and such can be made from off the shelf caps and coils you can wind from automotive AC tubing if the need arises.

In about 1989, we put a unipole on WDSR 1340 in Lake City, FL. The tower was actually over 90 degrees, but the base was nearly 100 feet offshore in the lake (thus the city name). The brackish water had pretty much dissolved the ground system after some 40 years, and we put down a large ground mesh in the water around the tower, and put a unipole on. The folks form Tennessee came down, and they supervised the rigger. they strapped the tower base plate to ground with three 2" copper straps, and use experience, the known impedance of the tower and the rigger to find a connect point. They were close enough that only two minor moves of less than a meter fund the right match, and the station was back on the air.

The unipole did increase coverage, in an area where ground conductivity is horrible. We did not notice any audio change, good or bad. The only long term bad thing is that the outriggers had to be retensioned a bit, and in major storms flying objects could break the wires or dislodge the fiberglass yardarms that held them away from the tower, and on one occasion breaking the critters off at the tower mount. I would not want one in a hurricane prone region, as it would fly off the tower at the first impact of airborne aluminum siding or trash cans.

Here you and I agree. He defends HD, yet he does not have a clue how it
operates, and he believes that DRM is analog compatible on the same channel.
He is also rude and potty mouthed, but profanity is generally the last
resort following a failed argument.

But he is an engineer.... I am just not sure if it is a "sanitary engineer"
(janitor) or a "maintenance engineer" (handyman). Of course, a handyman
tends to be clever and industrious, so that takes us back to the guy with
the toilet plunger hanging from his overalls.

It's obviously past your bedtime.

But, before you go, there is a Boise 50 kw AM on Craigslist for $800 thousand dollars... why don't you buy it and impress us all with your radio talent and knowledge? Of course, the potty words you erupt with here will have to be controlled, perhaps with a muzzle.

This has been about 8 years or so ago now, at the 970 AM site in Portland, OR. We didn't do the tuneup, that was left for their CE to do. We did the tower work.

I've had the opportunity (mostly doing grunt work) to work around lots of high energy RF. I had the really fun job of resplicing all the ground wires at the former Sunny 1520 (also a Portland market station) during a new site install. We built the new transmitter shack (moving the 50KW box out of the back room of a preschool of all places). I got to, as I said, reattach all the radials, about 300 of them, on a 3 tower system, then, when the concrete and block work were done (in different stages) I had to lay expanded copper mesh on the foundation, walls and roof of the shack (Faraday cage). Then I ran a few thousand feet of 50 pair icky-pick for control wiring. All this fun in August. :) Sure loved the $$$ though..

1712. Free Discount Prescription Cards

PR,

Hear some {many?} negatives about AM/MW "HD" Radio.

=BUT= FM "HD" Radio is tracking along far better than
FM Radio did during the adoption of FM Radio as an
'equal' Broadcast Media to AM/MW Radio. And it is
ahead of FM "Stereo" Radio as an upgrade/replacement
for 'Mono' FM Radio Broadcasting.

Again "HD" Radio will be successful as an FM 'Digital'
Broadcast Media because it "Fits" the FM Band Plan.

The story of "HD" Radio and the AM/MW Radio Band
will be sadly written and printed Section 'B' Page '9'
some many years into the future. {Obits}

The Key Marketing Tool for Over-the-Air Radio
Broadcasters is "Co-Branding" :
* Having an Over-the-Air Radio Station that is 'popular'
with the 20-Something Age Group of Radio Listeners.
* Having a WebSite with Streaming Audio of the
Over-the-Air Radio Station for the 20-Something Age
Group to also Listen-in-On.
* Creating Co-Brand Listener "Loyalty" for Both.
- - - Marrying Old Media to New Media to the present
"Now Generation".

like i read it some where dude ~ RHF

True, I am interested in the program aspect.

However, the internet is no go. I don't want the net at home, for
several reasons, especially because I would spend my whole life on it!

Hence, the need for shortwave or DRM. :)

Everything's in Japanese. I tried to find out how to change it into
English. When I posted the very first time, nothing came up on the
main page. 20 minutes later, my message was nowhere to be found. By
the way, remember, everything (except people's writing) was and is in
Japanese for me.

1721. The Harry Thomas Special Report - There Is No Visual Record Of A Passenger Jet Hitting The Pentagon Part 8 of 23

"=BUT= FM "HD" Radio is tracking along far better than
FM Radio did during the adoption of FM Radio as an
'equal' Broadcast Media to AM/MW Radio. And it is
ahead of FM "Stereo" Radio as an upgrade/replacement
for 'Mono' FM Radio Broadcasting. Again "HD" Radio will be successful
as an FM 'Digital'
Broadcast Media because it "Fits" the FM Band Plan"

You make the false assumption that the climate today is that of the
1960's/1970's - there are far more choices for consumers, such as
Sync, Satellite Radio, cell phone Internet Radio and music streaming
such as Sprint's Pandora - now, Sync make it seamless to stream such
music services effortlessly in-dash. HD Radio is yesterday's
technology, hence the total lack of interest by consumers.

"Ford SYNC, HD Radio and the state of competition"

"But Ford SYNC is coming out this fall. And it'll be standard on the
top trim levels (which constitute about 40% of Ford's sales). And this
will have a ripple-effect throughout all the other auto manufacturers
as the platform is licensed to GM, Honda and Toyota (this is Microsoft
we're talking about... though as Dave Zatz point out to me last night,

there is no Microsoft logo when you boot up). And if I was working at XM or Sirius, I'd be looking this and shaking my head. Because those OEM subscriber numbers are going to take a turn for the worst as soon as this hits the streets. But nah, that's not competition..."

http://www.orbitcast.com/archives/ford-sync-hd-radio-and-the-state-of-competition.html

Sync will spread to other automakers, and HD Radio won't even be a stain on consumers' pants.

You're much closer to Boise than I am. Why don't you buy it? Perhaps
you can solve all of it's problems by putting a fresh coat of paint on
the station.

I'll bet you could also learn from on-topic posts. You might want to
give it a shot. Maybe start off slow, with one or two on-topic posts,
and see how it goes.

I would have labeled this as "off topic", but thanks to Tardo the distinction between what's on/off-topic is now meaningless.

I'm thinking about picking up a new handheld tranceiver, probably a dual bander for 2 m. and 70 cm. Decent audio would be nice and build quality is important to me. I'd appreciate any advice about what to consider and/or avoid.

Thanks,

Steve

And I repeat:

HD radio works the same way. The digital signal sits *next to* the
station at 1070.

>
> iBquity's IBOC Broadcast System is 'Intrinsic'
> DRM's Simulcast Broadcast Scheme is NOT 'Intrinsic'

That distinction is more about FAITH, than reality. There's no real
difference between DRM's version (sitting next-to the AM signal) and
HD's version (also sitting next-to the AM signal).

Neither sits their digital signal on-top of the AM!
That would not work.
Duh.

1739. Re: Cannibals In The White House! Meet George Bush, Jr., Barbara Bush, Jr., G. Bush, Sr., B. Bush, Sr., Ronald Reagan, Clinton, Nixon, Gerald Ford, Eisenhower, Kennedy, And All The Rest Of The Presidents Of The United States!

> sexaling is this way, or that way, and so there fore, we are going to
> prohibit it, and so forth, is sheer lunacy, and not a notion that can
> be universally accepted as a reasonable statement by a reasonable
> person. It is the banter of minds that are insane, that state such
> remarks.
>

> Sexual Compassion For And With Others And For And With Self
>
> Sexual compassion for and with others, are the actions of engaging
> others to sexually erotemize them, and in so doing, to erotemize
> oneself, and to sexually orgasm others, and to orgasm oneself, for the
> sake of clearing up, or cleansing their and your karmic distresses, or
> karmic failures. Karmic failures are the naughtynesses, or
> misbegotten, mindless, dhourty like, animalistic behaviors, that lack
> compassion, and that lack mindfulness, and which is rife and riddled
> with jest and gayety directed at the victims of their torture
> sessions. This is mistaken, mindless, and uncompassionate behavior
> that causes undue and unjust suffereings and miseries to others, and
> draws one and all of my chidren further away from their relationship
> with their Creator Being, that's me, GOD.
>
> Balancing Out Karma, It Is My Way, Or Thou Shalt Takeeth The Highway!
> And Getteth Thoun Self Out Of My Universe!
>
> On the one hand, there is a need to balance out one's karma by
> engaging a person's life, and by bringing that person to a point of
> suffering where at the mathmatical formula for balancing out karma,
> and cleansing a person of his or her karma, will be satisfied. This
> need to balance out one's karma is based on a mathmatical formula,
> that must be followed, to allow people to balance out their karma, so
> that they can live as a nearly decent human being.
>
> The need to engage others, in retributional recoursivistic actions,
> for the sake of balancing out their karma for them, is a compassionate
> act, that can be done with passion, and compassion, if one's mind is a
> 'pure' mind, and the mind of GOD, that's me, John Francis Ayres.
>
> Only my mind is pure enough, and capable of GODLY passion for my
> children, that will bring a proper result to the lives of my children
> for balancing out their karma. The dhourty menacers, think they are
> mini gods, and they think it is their right and obligation, as stated
> in their code books, to help others with their karma, and so they are
> always, brutally punishing and tortureing others.
>
> There is a long history to this, that will help explain how this got
> started, and I am partly to blame for their beginings as an
> organization, as I helped design and write their code books. It is not
> clear in my memories how much I helped them to get their start, but as
> a sexaling lay organization, they had and have the right to make their
> own code books, that follow basic premises, established by me, long
> ago.
>
> Their behavior is too far out of line, but I used them as a
> supplemental assistive group of persons to assist me, in many ways, to
> allow my children to get their karma straigtened out. It was and is an
> imperfect organization, as it is run by imperfectly minded people. It

> is time to disband their organization, as now, in the Gurkian Age,
> there will be no other methods allowed for straightening out people's
> karma, other than the one's that I insist on, the ones that I
> implement with the assistance of my working children, the ones that I
> will use, to straighten out my childrens' karma, over time, as we
> progress along to the future.
>
> The Ludicrousness Of Playing 'Footsies' With The Insanity Driven
> Dhourty Government
>
> For me to contest a charge of 'lewd conduct' with the insanity driven
> Dhourty government is not an act that I will be engaging myself in. By
> insanity driven, I mean they believe they are all mini gods, and they
> believe they have the ultimate right to determine others' destiny.
> This is sheer insanity, and they are all mentally ill, and that will
> be proven, once you begin your studies in the programs that I and my
> working children have lined up for you to study and participate in.
>
> What Is Lewd Conduct?
>
> Lewd conduct is an act, that draws others to a higher state of knowing
> GOD, in that if you engage in a sexaling act, as a result of 'lewd
> conduct', or the act of soliciting others to make a sexual statement,
> or that is, to solicit others to commit them selves to a sexual
> activity, or action, for me to contest a charge, of 'lewd conduct', as
> I was saying, is sheer nonsense, and ludicrous behavior, and it is not
> in the domain of human beings to condemn 'lewd conduct' as lewd
> conduct is grateful to GODLYNESS conduct, as lewd conduct, and lewd
> behavior of sexaling with others, which is also a type of lewd
> conduct, is a sure way to reach higher states of grace, and that
> means, you grow closer in contact with your creator as a result of
> your lewd conduct.
>
> Gratefulness to GODLYNESS is a condition of being enraptured during
> the sexaling orgasming phase of sexual and erotic thrills inducing
> activities. The ejaculation and orgasming of males, and the orgasming
> and ejaculation of females, and the running or flowing of the sexaling
> juices from a females' body brings on a higher state of grace, and it
> brings you closer to your pure, devine, self as a 'child of GOD', and
> I am GOD, and I know this kind of stuff, so take my word for it, and
> get your brains, unbrainwashed, and get your dicks and vaginas busy,
> and learn what purity of self is all about as you sexal for weeks, and
> months, and years, non stop.
>
> The longer you sexal, the higher you will go, in terms of reaching a
> higher state of closeness to your Creator, that's me, GOD. For the
> dhourities to unfuck up them selves and their brains, and for the
> dualdigers to unfuck up them selves and their brains, and for them all
> to get their act together, to where they can appreciate the higher
> states of GODLYNESS, will take some time, maybe a few kabillions plus

> years, or more. I am, technically, a dualdiger, and so I am also in
> that lot, but I have an advantage, in that I am GOD, and it is easy
> for me to stay pointed in the correct direction, for gaining a higher
> sense or appreciation, over time, for the Love Of GOD, as my brain is
> minorly connected to that state of being. There is a connection, in my
> brain, that will carry me forward, and that will allow me to lead all
> of my children, to this higher level or state, or condition of
> beingness in harmony with the Love Of GOD, over the years we are
> sexaling together, in my religion, during my religious ceremonies and
> all of my religious activities, forever.
>
> With your experiences of coming closer to GODLYNESS, your life becomes
> purer, and your karmic records that you carry in your body, hidden
> behind the particals in your body, on different layers, or
> dimensionalities, and you can learn more about this, in the courses we
> offer, for you to learn to sexal for a living, and so forth, the
> records you carry begin to disintegrate, and they pale or loose their
> sharp, duralangular edges, is one way of looking at it.
>
> Duralangular edges is a term used in math, and I'm not familiar with
> it, but it must be something to do with geometric shapes. In any case,
> the edges sharp off, and that means, they drop off, and begin to form
> more loose, or flowing, curvatures, as they disintegrate. Think of a
> box with sharp edges. If the box is beaten on the edges, the box will
> loose the sharpness of the edges, and slowly, if you beat at the edges
> of the box, long enough, the box will begin to crumble. Well, it is
> sort of the same thing, and your karmic records have these types of
> geometric shapes to them, as we package things to do with your karma,
> in tiny containers, and then affix them to your karmic records. This
> sounds peculiar, but we have a way of doing it, and it works well, and
> we can disintegrate these 'packages' or capsules, and as we do, we
> straighten out or make lighter, your karma. This needs further
> explaining, but you'll study it in your courses, when you begin to
> study for the various programs we have for you to take and learn about
> how things work and about how things are in my universe.
>
> The sharp edges are slowly, very gradually, lost, or smoothed off, and
> your karma changes, slowly, very gradually, as you acquire more and
> more knowing GODLYNESS, and knowing GOD experiences for your self, as
> you orgasm your way to blissful, purity.
>
> It takes a lot of coming closer to GODLYNESS experiences to do
> anything significant for your karma, and for cleansing the karmic
> records in your life, the ones that are hidden in the dimensionalities
> behind the particals that make up your body. There are layers and
> layers of dimensionalities, and they nearly go on, forever. There is a
> limit to them, however, and between this dimensionality, and the final
> dimensionality, you have huge, and vast store houses of stockpiled
> karmic records. We find lots of places to hide them, and you won't
> believe how long it is going to take you to get all your karmic

> records that are stored not only in the layers below the particals in
> your body, but elsewhere, through out my whole and entire universe,
> behind the particals or in layers of dimensionalities, under the
> particals, that exist as matter, and as types of energies, and as
> types of many other things, throughout my universe.
>
> Storing And Dealing With Your Karmic Records
>
> Your records are stored from here to kalamazoo Michigan, and that is a
> phrase that says, they are every where, and the amount of time needed
> to erase them all, and deal with them all, bit by bit, is quite large.
> We've been here, a long time, and we've stored up your karmic records,
> every where. If you think this is a simple job of erasing your karmic
> records, you are mistaken, and you had better prepare your self for a
> long term, and long haul project for erasing your karmic records.
> Though the process of cleansing your karmic records is slow and
> gradual, through the knowing of GODLYNESS experiences you acquire,
> over time, the cleansing effects do occur, and your karmic burden is
> reduced, a tiny bit. You have stockpiles and stockpiles of karmic
> records, and we have found every imaginable way of storing them, and
> we have shrunken them down, to pint sized records, that are very tiny,
> and we have the technologies to do this, and we can resize them, and
> then place them inside of the holding cells, in the many
> dimensionalities behind, or underneath of the particals in your body,
> and in your vicinity where you live, and near the planet where you
> live on, way out to very far away from your planet, to nearly half or
> so away across the universe, the current sized one, or nearly that
> far. Your karmic records that interplay with your life, at the moment,
> are stored out that far, and we have others, stored and hidden
> elsewhere, as well, that are just sitting there, waiting to be dealt
> with. Our placing of your karmic records, along with every one elses,
> in this manner, deterimines what your karma is.
>
> With this storage method, it keeps your records where we want them to
> be, for us to be able to determine what your karma is, and for us to
> be able with my religion, and with your religious activities, of
> sexaling with your self, with others, and with your sexaling with
> animals, as sexaling is sexaling, and there is no distinguishing of
> the effects of sexaling. That is, your sexaling brings you closer to
> GODLYNESS, no matter if you sexal with an ape, or baboon, or with a
> monkey, or pet goose, or neighbor, or sister or brother, or your
> child, or mother or father, or the conductor on the train, or subway,
> or the stewardesses and stewards in the airplanes you fly in, or on
> the trains you travel and commute to work in, or on the cruise ships
> you vacation on, those of you with a little money, or with the workers
> in the casinos and restaraunts that you frequent, if you happen to
> live in Las Vegas, or other places where casinos are a part of the
> local life style, and so forth, with your sexaling experiences of
> coming closer to GODLYNESS, as you orgasm, and as you pulsate with
> energies that purify your life, these energies, and other energies my

> kids have a lot to do with, in the transporting of them to you, during
> your religious activities, and other things that are like energies
> that also cleanse your karma, but that need further clarification as
> to what they are, these energies, etc., erase your karmic records, in
> a priority determined manner with your karmic records stored in this
> manner as described. You will learn more about this, in detail, as you
> begin your studies once you have access to the software package that
> the FBI, and government agencies are in the possession of, as I've
> explained about.
>
> For the present, I am stuck in a swamp like sand box, a parcel of
> land, inhabited by dhourties, who are assasins, and killers for hire,
> who work hand in hand with the dhourty police, and dhourty members of
> law enforcement, and their dhourty staff. Dhourty hospitals also work
> hand in hand with the tunnel rat association of dhourty assasins and
> killers for hire, and with the dhourty police and their dhourty
> friends, and dhourty advisors. All dhourties work with one and
> another, in their local area, and they are generally, well connected
> with each other, in that local area, but only a few of them know about
> what is going on, with myself, GOD, and with my battle to over throw
> the dhourty led governments of the world.
>
> The Dhourties Are Not Informed As To What I Am Doing, And Few Of Them,
> Know Any Thing At All About Me
>
> There is no TV or media broadcasting about what I am doing, and they
> only have their 'propaganda' TV to watch and to gain information from,
> in addition to their 'propaganda' news papers, and 'propaganda' news
> magazines. They do not exchange much information, as they are
> prohibited from discussing business, except in the underground
> 'fortresses', the 'torture' facilities for torturing the dualdigers.
> Even in those locations, they do not generally discuss anything to do
> with business as usual types of stuff. Only important topics or
> issues, such as John Ayres trying to destroy the Lesbianists, or
> similar topics of importance, are allowed, and not much discussion of
> any thing of interest, is exchanged by them, even in private. They are
> busy with torturing the dualdigers, and it is a waste of time, to
> discuss private, personal, or local issues, and even state or national
> issues, and they are not allowed by their code books, to discuss
> 'wasteful' of time, issues with each other, while they are on their
> tour of duty.
>
> Lewd Conduct Should Be Advanced, Not Prohibited, In A Sane Society
>
> Lewd conduct should be advanced in any society, that has a sane,
> municipalator, or manager in charge of laws and criminalities, and not
> 'condemed' as is the way it is handled in this society. This will lead
> to the detieroration of and the disintegration of human relationships,
> and it will end all possiblities that people have of attaining a
> higher standard of spiritual beingness, or spiritual goodlyness

> engaged in a love relationship with one's creator. The action of
> sexaling brings about a state of euphoria, but in that euphoria, there
> is a holyness that is hard to penetrate into and perceive, as sexaling
> in our demented and twisted minded society, is a condemned activity,
> and that is clearly brain washed into every one's minds, as that is a
> propaganda ploy of the Lesbianists, the dhourties. Arresting ladies
> who sexal for a living, is one propaganda technique the Lesbianists
> use to alter the minds of people. Christian values, of, sexal only
> with one's spouse, is saying, you can not sexal with others and if you
> do, you will be committing a wrongful act. That is also clearly stated
> in Christian concepts, and it is another brain washing technique, not
> to mention, a most devious one, that is highly rewarded, with maximum
> penalties, in my karmic score card approach to managing my universe,
> and you will learn more about that, when you begin your 'Managing My
> Universe' course work, and you will also learn about it, as you go
> along, and learn the principals of my religions, past, and present.
>
> Lewd conduct is not a topic I will discuss with prosecuting attornies,
> or with DA's, or with judges, or with police, as they are not
> qualified to say a word about the realm of GODLYNESS, in their
> inferior roles as varmint hunters, or criminal watchers, and on this
> planet, as criminal torturers and killers. They are not fit, the
> Lesbianists, mentally, to judge or determine the value of sexaling.
> They are so anti-sexaling in their actions and words, and they are so
> incredibly twisted up in their brains with regards to sexaling, they
> will never come any where near me, or close to me, not one of them, as
> they are too twisted in their minds, to be allowed by my children, to
> come any where near me.
>
> The joke the Lesbianists promote about sexaling, where they publicly
> condem it, and privately enjoy sexaling with their co-worker
> dhourties, is a big joke, the dhourties are playing on you, and you
> are being goof balled, here, as well, into believeing that sexual
> promiscuity is a 'bad' thing. You are a fool if you believe that, and
> I am here to change all of that negative thinking, that you are
> burdened with, that the dhourties have fooled you into beliveing, if
> you in fact, do believe that sexual promiscuity is a 'negative' thing,
> as that, as I've explained, is the only way for you to erase your
> karma, and to ease the burden of karma in your life.
>
> Like it or not, if I had wanted you to wear clothes when you were
> born, I would have designed your bodies to have clothes on them, when
> you were born. Your skin is your clothes, and it is only a matter of
> time before you realize it. I did not design your bodies with any
> other clothes on them, for your birth, and so, all you need to live
> in, in moderate climates, is your skin and hair. That is all you need
> and you will all get used to it, one day, living in your skin, and
> hair, only, after you begin working for me, sexaling for a living, as
> I have explained about.
>

> You are all going to work for me, erasing karma, from now on, by
> sexaling, as soon as I get my religious ministry, established. My kids
> will be building the facilities for you to live and work in. When they
> will begin building the facilities for you to live and work in, is the
> question, that I do not have an answer for. But I am praying, that it
> will be as soon as possible, as I do not need to be surrounded by
> dhourty jerks in the park, who call the police every time I arrive to
> do my Tai Chi aerobics excercises religious prayer ceremonies.
>
> The dhourties in the park, and the dhourties at the police station,
> and in the Clark County Detention Center, are all partners, who work
> hand in hand, along with police department, sheriff's department, and
> other law enforcement clerical dhourties, law enforcement dhourty
> judges, and prosecuting attorney dhourties. We are surrounded by the
> dhourties, in government, such as all the politicians running for
> president, and all the politicians running for vice president,
> including, former mayor Guiliani, who was with other dhourties,
> primarily responsible for the World Trade Tower bombing, as I've
> explained about.
>
> These dhourties, and their dhourty friends, in society, account for a
> large segment of our society. The ordinary people, for the most part,
> former Lesbianists, i.e., dhourties, in previous lifes, are another
> large segment of our population. One other segment, is my, what I
> call, my public sector service workers, animal people, who eat and
> torture dhourties, and others, who need their karma balanced out.
>
> The dhourties are well aware of these animal people, and there are
> some dhourties, who can not function, brainally, very well, and these
> dhourties who can not function brainally very well, are not that
> different from these animal people, as they both do the same basic
> thing, and that is torture people, and torturing people helps to
> balance out karma.
>
> We are in a new age, the Gurkian Age, and I have a whole new religious
> program, for balancing out karma, and you will all participate in it,
> if you want to balance out your karma, and if you want to erase your
> karma, and you will be in this religious program, for eternity,
> sexaling with each other, as I have already explained.
>
> Organ Animals And Sexaling
>
> I mentioned the organ animals and their ability to make notational
> thoughts to your brain. The 'I need sex' 'I need sex' drive in your
> pants, or panties, on the front side of your groin, or on the
> underside of your groin, or in your butt hole, the urging out, of 'I
> need sex' 'I need sex', or in the boobies of women and girls, the
> urging, 'I need sex' 'I need sex', they are all notational thoughts
> from the sexaling organ animals in your body. Let's get used to this
> fact, and grow up, and deal with things, logically. They are calling

> out for our assistance. They want love and affection. They are hungry
> for love and affection. I put them in your body the way they are so
> they will help you in your daily activities of sexaling. Now let's get
> real, and let's pet those organ animals, when they call out, saying,
> 'I want sex, please pet me now!' It's be kind to organ animals week,
> this week and every week from now on, until we learn to be helpful to
> all of our sexaling organ animals who need petting, and until we learn
> to be comfortable with our sexuality. Let's get real, and let's get
> the governments of the world to strike down the laws regarding
> sexuality, nakedity, and sex between younger people and older people,
> and let's also get the governments of the world to strike down all the
> laws regarding the use of opiates, and aphrodesics in our daily diet
> and in our quest to get healthier. We need these in our diet, as I've
> mentioned before, and we will push ahead until we get the dhourty
> governments of the world to listen to us, and then to comply.
>
> All Hands At The Quarter! Ready Your Weapons! Off Shoot Now!
>
> That means, get to your stations, and prepare to fight. Get your
> weapons in firing order. Discharge your weapons.
>
> That means, get naked, get your dicks, scrotums, your vaginas, labia,
> all your sexaling equipment, such as your titties, your chests, your
> pelvises, your hips, your tummies, your groins, your butt cracks, your
> butt holes, your shanks, your backs, yopur shoulders, your necks, your
> under arms, your feet, your palms, your toes, your fingers, your
> tounges, your lips, your mouths, your throats, etc., and get every
> little or big organ animal in your body that is hiding in you, to
> work, working for you, as they are all designed and built for you to
> use for sexaling enjoyment, and that body you are in, is designed and
> built to be used for sexaling with your self, with others, as well as
> with animals, and get ready to use them, and get using them, now.
>
> Keep Firing Till Ordered Otherwise!
>
> That means, do not stop sexaling, till you are ordered to.

> Expeller Ports, And Who Knows What Else, Oh My! - Subtle Ways Of Brain
> Washing People - What Is Sodomy? - Societal Brain Washing - Hair Ports
> - Teeth Ports Updated: 11-08-07 Rev.b 05:50
>
> Eyes, Ears, Noses, Throats, Tummies, Buttholes, Dicks, Vaginas,
> Expeller Ports, And Who Knows What Else, Oh My!

>
> Did you know that we have lots of organ animals inside of us? We do.
> And do you know what else? Each one of them, has its own brain. It has
> lots of brains inside of it, and each one does a particular function,
> or maybe many functions. Probably lots of functions, I suppose. In any
> case, each one has eyes, and each one has a nose, one or more, and
> each one has a mouth, and each one has ears, and each one has a
> throat, one or more, and each one has a butt hole, and a dick, or a
> vagina, or maybe both, or maybe something in between, or maybe, some
> thing that is not like a dick or a vagina, and is not in between, but
> it is some thing that is wholely and entirely different from any thing
> we are familiar with as far as reproductive organs go.
>
> They also have tummies, and expeller ports, which are ports or
> openings, that help them to expate the juices that there are inside of
> them. What does expate mean? I think it means, to spit out. They
> expate, or spit out, all kinds of juices, from lots of expeller ports,
> or expeller opening holes, that open and close, and when they open,
> juices come drooling out of them, and when they close, the juices stop
> coming out, and the fluids drool and drain off and go some where, such
> as down a via duct, or a channel, and out into a pool, where there are
> animals, swimming, and snorkeling, and looking for food to eat.
>
> Anyway, it's a confusing world, inside the body, if you don't go into
> it, and look around for your self, at all the possible hiding places,
> there are animals hiding, and eating up one and another.
>
> We can look inside, and that is much safer, with microscope
> technologies that will allow us to look inside, into all the different
> habitats that there are, where animals are living, eating, making
> children by themselves or with others who are like them, and so forth.
>
> There are all kinds of odd creatures living inside of us, and we
> haven't even begun to understand who is in there, and what they are
> all doing. I think we need the cooperation of the governments of the
> world, the dhourty governments, that I've explained about, and when
> they give us a little cooperation, we can build the types of
> microscopic technologies we need to look inside of our bodies, and see
> all the little animals that are moving about, and eating, drinking,
> swimming, fooling around, walking around, and just playing around, or
> making love with one and another, to make babies.
>
> Did you know, too, that there are optical nerves, that are a little
> like optic fibers, and they connect many of the organ animals inside
> of us, up to optic cirtcuits that then allow them to see out side of
> our body.
>
> That means, they can see the world around us. Did you know our whole
> body is covered with microscopic, and smaller, optic ports, or viewing
> windows, and viewing ports, to allow the organ animals inside of our

> bodies to see out side the human body.
>
> It's true. There are also nerves that are channels, like optic ports,
> but they are sensory ports of different kinds. These sensory ports
> also connect the organ animals up to the skin of our bodies, so they
> can smell the fresh air around us, and these sensory nerves act like
> little noses, and they are all over our body, in smaller than
> microscopic sizes, as well.
>
> There are also sensory nerves that function as ears, for the organ
> animals, and they are connected up to the skin of our body, so that
> the organ animals can hear things, that are going on, around us.
>
> There are other sensory nerves, that connect organ animals up to the
> surface of our skin, and these sensory nerves, allow for communication
> with other organ animals in other people's bodies.
>
> The organ animals all see each other, the outsides of each other, and
> they can even see inside of your body, with special heat wave
> signatures, and other technologies, that allow them to peer inside of
> your body, and then see their organ animal friends, more up close.
>
> That means, they can see each other, and they can talk with each
> other. They have sensory nerves that transmit code to the special ears
> of the other organ animals who they wish to speak with, and the
> special ears of the other organ animals pick up different frequencies,
> and different coding structures, and then they can communicate back
> and forth with each other.
>
> You didn't know that, did you. Well, it is a secret the Lesbianists,
> or dhourties, do not want the dualdigers to know about. Do you know
> why? Because, their Christian bullshit is just that. A pile of bull
> shit. Not only that, but their sciences are all full of shit, too. If
> you know that there are organ animals who want to see out side your
> body, and view and communicate with other organ animals, who are in
> other people's bodies, then you will want to allow them to hear as
> best as they can, and you will want them to see as best as they can,
> and you will want to let them smell the fragrances outside your body,
> of other organ animals, as best as they can, and so forth, and that
> means, you will want to take your clothes off to allow them to see
> outside, and hear outside, and smell outside, and speak outside to
> other organ animals, with no interference from your clothes, and
> skirts, and pants, and underpants, blouses, bras, shirts, socks,
> shoes, jackets, handbags, brief cases, and so forth.
>
> You would want to stay naked, as much as possible, because that was
> how I designed you to be. Did you know that? Well, it is true. We have
> to let the organ animals inside of our bodies get as much fresh air,
> and as much sunlight, and as much sensory input as possible, from the
> outside world, and from other organ animals, for them to be happy,

> living and working where they do, inside of our bodies.
>
> Does that make sense to you? I hope it does, because we are all
> mistaken in our beliefs that we must wear clothes.
>
> Nudity promotes the health of the organ animals, inside of our bodies,
> both mentally, emotionally, spiritually, and sexually. They get turned
> on by the fragrances of other organ animals, and by the sights as they
> look at other organ animals, working in your body, and at the figures
> of other organ animals, and at the sexy looking sexaling ports, or
> dick and vaginas, of other organ animals. They are like puppy dogs, in
> a way, but much more complicated, and much more intelligent, many of
> them, any way.
>
> They have complicated code structures, that allow them to speak back
> and forth with other organ animals, in ways that allow them to tell
> jokes, and to tell funny stories, and to sing songs, and to teach
> other organ animals who are like them, about things they know about.
>
> Not many of you may know this, but all the dhourties know this. They
> have to keep it a secret from you, so that you can continue in your
> ignorance, thinking you are 'created in the likeness of god' which is
> total bull shit and trash.
>
> Well, now that we understand that much, it is time to investigate and
> get this all cleared up. Now how do we investigate this? I don't know,
> but maybe when we get the cooperation of the dhourties in government,
> we will get some software from them, the software that I handed to
> them, or the software that they have hidden away in secret filing
> cabinets, which they can allow you to use, to see inside your body,
> and investigate all these things.
>
> Do you think the organ animals like being trapped inside of your body,
> unable to see out side, or hear outside, or speak to others, outside,
> because you live so far away from each other, and you live in tiny
> boxes, homes, or houses, or apartments, and condominiums, etc., where
> you live by your self, separated from others.
>
> I don't think they are very happy that you are all living in your tiny
> boxes, which serve as homes for you, where you live by your self, much
> of the time, and you pay no attention to the needs of the organ
> animals.
>
> They need light, sun, shade, coolness, brisk breezes, and the scents
> and smells of other organ animals, and the nearness of others, to
> them, so they can communicate and chat back and forth with their
> friends, the other organ animals in other peoples' bodies.
>
> You need to marry each other in large groups, in other words, and you
> need to stay togehther in large groups, and you need to be naked,

> twenty four hours a day, in large groups, and you need to go out side
> and play naked, in the sunlight, with others in your groups, and with
> others from other groups, to allow your organ animals to get all the
> opportunities to meet with new people, other organ animals, who are as
> intelligent as they are.
>
> Did you think you were the only intelligent people in the whole
> universe? Well, some of my organ animals are almost just as
> intelligent as you are.
>
> In some ways, they are as intelligent as you are. Did you know that?
> How does that make you feel. You have a cooped up organ animal, lots
> of them, inside your body, who you do not even know about, and they
> are all wanting to make friends with other organ animals, and they are
> all wanting to meet with other organ animals, while they work for me,
> and for you, inside of your body.
>
> Well, the little secret of the dhourties, this one, any way, is now
> out and open to the public, and you can make of it, what you want, and
> you can either research it, and learn about the facts of this, or you
> can deny it, in ignorance, because you think 'Jesus saves' and you
> think 'god' or 'allah' is going to make you a nice home, after you
> die. What garbage talk.
>
> The dhourties have made you swallow their garbage talk, all this time,
> and they have been fooling you, and they have been rejuvenating their
> bodies, and then playing as if they were some kind of watch person, or
> care taker, who could decide your futures for you.
>
> Well, I don't think Hillary Clinton, or Barack Obama, or any of the
> other dhourty government leaders who are running for a presidential
> candidacy, or for a vice presidential candidacy, is going to like the
> news that you now know what is going on, a little more than before,
> inside of your body, and that you are about to reject their religious
> garbage talk, and all of their sciences garbage talk, and all of their
> statutes garbage talk, that help to keep you in check, and in line,
> and that keep you going, working and growing older, day after day,
> paying the taxes for maintaining their livelyhood, while they have a
> way to rejuvenate themselves, as professional moldists, and while you
> have nothing, other than a token watch for working thirty, or more
> years, devoted to the company, before you were released from work,
> with a meager pension, to find a grave yard plot, for placing your
> bones in, after you die, and go back to my Epcot Center, for
> refurbishing, and for making you as good as new, nearly, for your
> release as a new tummy baby, back to one of your former neighbors, or
> former relatives, as a new baby.
>
> Isn't that about the stupidist thing you've ever heard of? And isn't
> that a joke. Well, they get away with it, every day, and the dhourties
> who support them, organizationally, are in on it with them, and none

> of them deserve much of a nice smile, or any thing else, for that
> matter, for all their mean jokes and tricks that they have played on
> you.
>
> That means, go right ahead, and kill them all, as I do not care any
> more, about any of these dhourty kids of mine, unless they are willing
> to cooperate with all of my dualdiger kids. Do you understand that? Go
> to the dhourty courthouses, and blow them up, and go to the police
> stations, and jails, and prisons, and blow them all up, and medical
> hospitals are other big places which dhourties like to torture
> dualdiger kids of mine, under them, and even in secret rooms, in them,
> and so are universities and colleges, and large schools, and low
> income housing projects, government buildings of all kinds, and blow
> all of them up, along with the Pentagon, Fort Knox, and so on.
>
> We have to get the dhourties in government to cooperate, and to do
> that, we need to send them a message. So if you wish to blow
> Washington, D.C., out of the surrounding area, and level the white
> house, and every one in it, then go right ahead. You have my explosive
> formulas, on my bulletin board, so go right ahead, and do what you
> think is right.
>
> Now, we need the cooperating dhourties, to tell us every thing, and we
> want them to cooperate with us, as quickly as possible. Are you
> listening, Mr., And Mrs. Dhourties? You had better be, as some people
> may not like you, very much.
>
> When the organ animals all get charged up, then you, your self, get
> charged up. Did you know that? You bet it is the truth. When your
> organ animals spot a pretty looking girl, if you are a boy, or if you
> are a girl and your organ animals spot an attractive looking guy, then
> your organ animals inside of you leap into the air, almost, and they
> are saying, 'I want to sexal with that person.'
>
> If you are a girl, you begin drooling out of the vagina, and your body
> stiffens up in many places, and you get firm, and ready for sexaling
> with the other person. Other things, such as hard titties, and hard
> tittie nipples firm up, and your butt muscles firm up, and your vagina
> swells up, and your organ animals are all saying, 'Let's go for it.'
> What fools we are to ignore our organ animals. If you are a boy, your
> dick gets firm, and you get a big one. That is a hard dick that
> inflates and grows large.
>
> Subtle Ways Of Brain Washing People
>
> It is in the Christian teachings and Muslim teachings that say, we
> shouldn't go around, looking with 'roving eyes' and, we must not look
> women and girls in the face, in the muslim countries. They teach about
> 'lewdness' which is a totally made up, fictitious concept of theirs,
> as there is no such thing as lewdness, and they only make us think

> there is, with their unique, deceptive, and tricky brain washing
> techniques that they use in the mass media, and in schools, and in
> churches, and in synagogues, and in mosques, and so forth. Saying
> 'incest' is a bad thing, or that 'sex with a minor' is a bad thing, or
> that 'casual sex' is a bad thing, and only 'loose women' have casual
> sex with others, or 'tramps', and calling girls 'sluts' and 'whores',
> and using words like 'mother fucker' as a way of saying the person is
> a bad person, or using the word, 'rape', or 'gang rape', to mean some
> thing 'bad' happened, or in the same way to use the words, 'sodomy' or
> to 'sodomize' another, to mean some thing that was against rules of
> some 'abstract' 'god', or something, who supposedly left a bunch of
> rules to live by which are in the quoran, or bible, or Judaic texts,
> and so forth, all these examples are used to subtly brain wash us,
> into thinking that sexing is an area of life, that we had better be
> careful with, because if we are not, we may end up breaking a law, or
> we may end up being sent to jail, or we may end up being shot by
> someone who does not approve of our behavior.
>
> What Is Sodomy?
>
> So called, 'sodomy' or, poking some one in the butt hole with one's
> dick, without the person's permission, is not a nice thing, but if you
> ask, and if the person says, yes, fine, then, you need to massage the
> butt hole, for half an hour or so, or in some cases, a little longer,
> till you make the butt hole muscles relax. When they are relaxed, and
> after the person has pooped out the poopy, lumpy stuff in the butt
> hole channel, or the rectal column, or descending colon, is another
> word for rectal column, and I've talked about the 'shank' in an
> earlier post, and you should read it, once the shank, or butt hole
> tube is loosened up by massaging the opening hole, the butt hole,
> suffiently, then it is easy to slip in a dick, and women have dicks -
> unless the doctors at the birthing hospital, cut off the baby girl's
> dick when she was born, saying, 'The little baby girl will never be
> able to find a husband, if she has a man's dick on her body' and with
> that, they often just do surgery, and cut off the dick, and close up
> the pee tube hole, and then pretend like nothing happened, and the
> mother and father never even tell the girl she had a dick when she was
> born - and girls and women like to slip their dicks into the butt hole
> tube, also, and they like to ejaculate into the butt hole tube and
> orgasm as they ejaculate and as they sexal boys and girls, and men and
> women, with one's dick inserted into the butt hole tube, which feels
> like a vagina, and is generally the same type of thing as a vagina,
> except it is not for baby making, but it is for sexaling with others,
> as I've explained, and men and boys like to sexal or put their dicks
> into the butt hole tube, and eventually ejaculate, and orgasm, as
> well, and there is nothing wrong with it, and it brings you closer to
> 'GOD', that's me, as you orgasm, as I've explained. The butt hole tube
> begins to leak sexaling juices, as you sexal it with your dick
> inserted into it, and that is a natural phenomena, and no one can deny
> that the juices that leak out of the butt hole are sexaling juices. So

> 'sodomy' is just another bull shit idea of the dhourties, who wanted
> to make sexaling between men and boys, and between women and girls,
> 'illegal', and then use that, to subtley brain wash people that sexing
> the butt hole is a 'no no', and you may go to 'jail' if you sexal the
> butt hole, and get caught doing it. Aren't the dhourty kids of mine,
> stupid? Did they think they could keep this a secret, that sexing the
> butt hole tube, is a pleasureable experience, and once you get used to
> it, your capabilities for sexually orgasming, double and triple, and
> even go higher, as you can sexal the butt hole tube, for days and
> days, and with many partners, and it can go on for weeks, and weeks,
> non stop, especially in women and in girls, who can sleep, with one
> eye partially open, while sexaling all night, if the partners are
> quite enough. You can orgasm so many times, one after another, after
> another, after two and a half weeks, to four weeks of sexaling the
> butt hole tube, day and night, and orgasms will continue, non stop,
> and soon, you will not want to stop, and if you continue for long
> enough, you will eventually pass out from orgasming so many times. So,
> 'sodomy' no matter how you look at it, or gang rape of the butt hole
> tube, is a good thing, and it brings you closer to GOD, that's me, but
> you have to ask the person for permission, to do it correctly, and you
> can not force your self on the other person, as that is called,
> assaulting another person, and that is not a good thing, so ask,
> first, and if the person says, okay' then it should be perfectly
> alright, but just don't tell the police, or your school yard security
> officer, since they will report you to the district attorney, and
> you'll get arrested for some stupid crap, bullshit, legalistic
> nonsensical, dhourty minded, cheap trick they are using against you,
> to stop you from having a good time, sexaling. Aren't they idiots.
> Well we are going to clear up, all of this, and in time, all women and
> girls, and all men and boys, will learn that sexaling the butt hole
> tube, is a fun thing to do, and a fun sport, for men and boys to
> engage in, and a fun way of sexaling for women and girls to engage in,
> and in time, you'll all love sexaling the butt hole tube. And you
> girls and women who had your dicks cut off, before you were old enough
> to say whether you wished to have it on your body, or not, which is
> kind of a nutty thing to think about, as of course, you would want
> your hands attached to your body, and of course you would want all
> your limbs attached to your body, and the dick is just another limb,
> but it is a very important limb, because it can help you to draw
> closer to GOD, that's me, as you sexal with your dick, you girls and
> women, who had your dicks cut off, you can eventually grow them back,
> as I've explained about, before, using tissue and organ regrowth molds
> and foods for the molds, which will make the organ animals begin to
> make babies, so that your dick grows back, eventually. It may take
> some time, but little by little, it will grow back. The dhourty girls
> and women, who come out for a tour of duty, always have their dicks
> cut off, so that they can fool people into thinking that they were not
> born with a dick. It is one of the Lesbianists' rules that they cut
> their dicks off, before they come out for a tour of duty. Ask one of
> them, and you'll see that I'm right about this. They grow it back,

> once their tour of duty is up, and once they have a suitable place to
> live, where they can live for the next, few thousand years, while
> their bodies repair them selves. It takes a few thousand years for a
> dick to grow back, completely, or nearly that long, but once it grows
> back, it is usually as good as new. Seldom is it not good as new, and
> only if the person has some kind of karmic problem, will it not grow
> back, perfectly. That's very seldom, but it does happen. You can try
> again, after you sexal a long time, and you will be able to erase your
> negative karma, that keeps you from having a perfectly formed dick to
> sexal with, if your dick does not grow back, perfectly, the first
> time. In time, after you erase your karma, enough, your dick will
> begin to shape up into a perfectly formed dick, but it takes a long
> time, to get it perfect, so don't worry, as we will be here, for ever,
> and we will be sexaling for ever, as this is a new age, the Gurkian
> Age, and we are going to be sexaling for ever, from now on, all of
> you, and me, too.
>
> Societal Brain Washing
>
> These tricks with words the dhourty kids play on us and use in the
> media, is societal brain washing, and there are other types of brain
> washing they use, such as in sunday school, by saying 'the lord said
> that you should be chaste and love only your one wife' or something to
> that effect, or that 'you should love, have sex, and have children
> with only your "legally married to you and sanctioned by the
> government, and here is a piece of paper to prove it" husband'. Well,
> there are still other ways of brain washing you, by showing you how in
> muslim countries, how strict people are about sexing with others who
> they are not married to. This is subtle brain washing they use in the
> media to try and scare you into following the rules they set up for
> you to follow. They think you and I are fools, and that you and I will
> not question their authority, but that is now all coming to an end.
> That means, it is the end of an age, a long age, from the very
> begining of our time in this universe, and we are starting a new age,
> the Gurkian Age, and we are going to start all over, and right all the
> wrongs, and get every thing corrected that needs correcting.
>
> When you live a healthy life, with full nakedity, daily, every day of
> the year, you begin to charge up the organ animals, inside of your
> body, and when you live and work with others, in large groups of
> people, who are also naked, twenty four hours a day, seven days a
> week, you and they all begin to get charged up by your organ animals.
> It is no secret, that if they feel good, then you feel good. If they
> feel invigorated, and sexually charged up, then you will feel
> invigorated, and sexually charged up.
>
> What fools we are, not to know this. I don't mean, you, my dualdiger
> kids, but it seems we should all know this, as it would be common
> sense, if we were taught this in the public school system.
>

> We are not given the chance to know about this, as the dhourties are
> all too secretive, and they like feeding us their garbage talk, their
> school teachers, and their professors, and their sunday school
> teachers, and their law enforcement workers, and their judges, and
> their government administrators, and so forth. I think we should get
> rid of them all, and start out, fresh, but that isn't the way to go,
> as we want to get them to cooperate with us, and to do that, we need
> to invite them into your homes, into the play time dungeon cells,
> where you can have them teach you all the secrets to sexaling, and all
> the interesting information on living long, and prolonging our lives,
> with molds, and foods for molds, that feed our organ animals, and
> allow us to live forever as the organ animals, reproduce, as well as
> the secret about where we can get spare body parts from, which is from
> the sexaling juices of men and women, and even animals.
>
> Well, it is about time, we started to find out the truth about all of
> this, and if we do not get the cooperation of the dhourties in
> government, pretty soon, there are going to be a lot of angry people,
> pretty soon, as word of all of this, begins to spread from person to
> person, as the dhourty news companies, the brain washing media
> companies, with their bullshit news stories about 'incest' and about,
> 'lewdness', and about, 'prince charles and his latest secret sex
> scandal', and so on, all the petty bull shit garbage talk they make us
> swallow, as interesting news stories, which secretly send messages to
> our brains, that sexaling is a 'no no', and that is total garbage
> talk, but we are influenced to believe that sexaling is a 'no no' by
> subtle means, every day, over the air waves, on tv, in the news, and
> in the mass media print, in the news papers and news magazines. Well,
> it is time to burn the 'Inquirer' down, and blow their basement up, as
> well, as they no doubt, have the same kinds of torture facilities for
> torturing dualdigers, under them, as well.
>
> Hair Ports
>
> Where else do the viewing ports, or optical ports, and the other ports
> for sniffing fragrances, and for hearing sounds, and for hearing
> various coding frequencies, that the organ animals communicate back
> and forth on, exist?
>
> They grow in nose hair follicles, eye lash follicles, eye brow
> follicles, nose and throat hair follicles, stomach hair follicles,
> intestinal skin hair follicles, external skin follicles, head hair
> follicles, facial hair follicles, leg, arm, and body hair follicles.
> The sensory ports grow along with the hair follicles, extending their
> way up the hair shafts, and to the surfaces of the hair follicles so
> that they can pick up the light waves, and various energies waves, for
> sounds, and for colors, hues, textures, texturing hues, light and
> grey, dark and white, prisms, or prismatic colors.
>
> The organ animals transmit in not only sound orientation patterns, but

> also in light wave frequencies patterns. There are many energies wave
> forms that they can transmit and pick up, and the multitude of
> variances and types are far greater then we are aware of. The organ
> animals can transmit off and send out various frequencies, with
> various tonal orientations. They can transmit in light wave energies
> codings of various shades, colors, hues, textures, and patterns. The
> variety is nearly limitless, and it will take you a long time to study
> about all of them.
>
> There are odors that they can pick up, and there are odors that they
> can generate, when they are healthy. They are not healthy, unless you
> feed them, correctly. If you do not feed them the foods that they
> like, they will not send out any special energies wave forms, or even
> odors, or much of any thing else, as they are starving, and have no
> way of supplying the needed nutrients to the internal organs of the
> organ animals, for the internal organs to produce the energies needed,
> to transmit and send signals out in.
>
> If you do not feed the organ animals the foods they need, they become
> pathetically weak, and they will barely do any thing, at all, in terms
> of communicating with other organs animals.
>
> If the organ animals do not communicate with other organs animals in
> our own body, and in other people's bodies, they can not meet and talk
> with other organs animals, and they can not sing to each other, and
> they can not give off the scents and odors that signal health and well
> beingness and that bring cheer and happiness, and vital energies to
> each other, as they sexually arouse each other, and that in turn,
> sexually arouse us, as a spin off of their good health, fitness, and
> well beingness.
>
> They are stuck in a pathetically weak physical condition, all their
> life, narly starving to death, because of the poor diets we are
> encouraged to eat, that do not give them the nutrients they need to
> get healthy, and fit. The pitifully poor in nutrients foods such as
> corn flakes, or cheerios, raisin bran, total, and so forth,
> manufactured by Kellog's or Proctor and Gamble, General Mills, Quaker
> Oats, etc., and all the other, pathetically nutritionless foods that
> the major and minor dhourties' foods manufacturers produce, that we
> eat, day in and day out, do nothing for the health and welfare of our
> organ animals, and these foods barely keep us alive, nutritionally
> speaking.
>
> The organ animals, when healthy, can use all the possible transmission
> frequencies that are available to them, to speak to others, and to
> communicate with others, and to begin to have a good time, in life.
> They deserve to have a good time, in life, just as your pet dog does,
> and just as your pet parakeet does, and just as your pet cat or ferret
> does.
>

> We can not starve these animals inside of our bodies, which is
> basically what we are doing, at the present. We can not deny them a
> view to the outside world by covering up our bodies with clothes,
> women's and girls' faces with veils and women's and girls' hair with
> scarves as in the middle east, and with face powder and mascara, as is
> the tradition in the west, and in some eastern countries.
>
> We can not deny the organ animals companionship with others of their
> species, if you can call it that. They are living beings, and they are
> creatures. They are breathing, and alive, and they wish to be fed, and
> they wish to stay healthy, and they wish to meet others, and they wish
> to be able to communicate with others, and we deny them those rights
> of theirs, and others of their rights, because we are ignorant as to
> the fact of their existence in our bodies.
>
> This is obviously a conspiracy, if you haven't figured it out, by now,
> and we have to put a stop to it. We also have to educate our selves as
> to how to feed them, and how to properly feed our bodies for maximum
> nutrient intake to the organ animals, that are the basis for our
> physical, mental, emotional, and spiritual well beingness.
>
> In time, we will learn more about all of this as we get the
> cooperation of more and more of the dhourties, who are willing to
> cooperate, and who are willing to teach you, my dualdiger children,
> about all of this. I am GOD, and I am your mom and pop. I can call you
> my children, and I can call my dhourty children, my children, and you
> had all better get used to it, as now and then I will address all of
> you as my children, whether people like it or not.
>
> I've got lots of children in my universe, and some of them look like
> fucking apes, and some of them look like fucking monkeys, and some of
> them look like ostriches, and you won't believe the mutataions they
> have gone through, some of them, and actually, lots of them. Many of
> them are mixed mutations, that they have gone through, and lots of
> them look nothing like any thing you've ever seen before. They are
> gruesome looking, and scarisome, and you would not like to meet them,
> guraranteed, as they will tend to eat you up, if they can. It's the
> result of their karma, and it will be a long time before we erase
> eneough of their karma to make a difference, so as to bring them back
> to a form that is close to or similar to what a human being looks
> like, for us to then mix with, marry with, and sexal with. You were
> all the spouses of each other, from way, way, back, and you will be
> the kids of mine, and you will be marrying each other, again and
> again, as there is no limit to the number of times you can form a
> parental union, and that means with more than one spouse in tow. You
> can form parental unions with more than one spouse, and there is no
> limit, practically, to the number of spouses you can have, male and
> female, at the same time.
>
> I'm not sure what the limit is, but it is a working number of people,

> and that means, any where below a few trillion, or maybe even a few
> more. You can have nearly an unlimited number of spouses, and that's
> probably more like it, but the trick is, how do you manage all your
> spouses, that is, how do you serve and protect, and sexal with all of
> them, when the number grows over a few million or more. Well, it takes
> time, and experience to teach you that, and you'll learn all that, in
> your courses you'll be taking, when you start up studying, and
> participating in the programs that I and my children have planned for
> you, once we get a little further into the Gurkian Age. We are still
> in the preparatory stages, of my religous revolution, and soon we will
> be getting past the preparatory stages, and how soon, I can't
> estimate, but obviously, we need the cooperation of the dhourty
> governments, and of the dhourties to begin to get any where.
>
> Teeth Ports
>
> We have teeth and finger nails, and toe nails that also have optical
> ports, and other sensory ports in them. Of course our animals inside
> of our teeth want to make friends with other animals inside of other
> people's teeth. There are also many other animals inside of us who can
> use the viewing, or optical ports inside the teeth, and in the finger
> nails, and in the toe nails, for viewing outside of the body, and for
> looking at other animals in other people's bodies, and then for
> communicating with those animals. All these animals are organ animals,
> and they are on the job, twenty four hours a day, seven days a week,
> and they barely ever sleep. They like to make contact with others of
> thier kind. I don't know if 'species' is correct, but they are all my
> worker animals, or in this case, worker organ animals. They need
> respect just like your puppy dogs and your cats and your parrots do,
> if you are a normal human being who respects other living beings.
> Well, any way, lots of these organ animals inside of us, are very
> clever, and much more clever than we are, in some ways. You can study
> about them and how they communicate with each other, and how they have
> fun with each other, once we get the educational materials that I
> handed out, to the FBI, and that was passed on to the governments of
> the world, as I've explained about, before.
>
> We probably should not cover up our faces with makeup, because that
> makes it hard for organ animals to see out side into the world around
> them. It also makes communicating difficult, when we put on face
> makeup, that is, when women and girls put on face makeup, as that gets
> in the way of the optical viewing ports, and it gets in the way of the
> ear ports, the hearing ports, or the incoming signals ports. Also,
> finger nail polish and toe nail polish is of course, obstructive, and
> it prevents the organ animals from communicating out and it prevents
> the organ animals from recieving incomeing light wave and signals
> waves transmission signals that depend on your having clear and not
> painted toe and finger nails. Hair coloring in women and in men, and

At one time I would have complained that your post is simply insane.
However, relative to many of the posts we get nowadays, your remarks
are actually pretty sensible.

The 10 kHz heterodynes are from the carriers, not the sidebands. They
can easily be notched out, by the way.

The List Goes On . . .

* Even Personal Saving and Private Retirement Investments
that receive favorable Federal and State Tax treatment are
a form of Government Benefit.

* The Home Loan 'Deduction' is a Federal/State 'Subsidy'
to encourage Home Owership.

* Rental Property "Depreciation" is a Federal/State 'Subsidy'
to encourage Property Owership and Real Estate Business
Growth. This also applies to all forms of Depreciation Claimed
by Bussinesses and Corporations.

* Farm Subsidies, Price Supports etc.

* Any and All Federal Tax Credits to Individuals and Businesses.

* Any and All State/City Tax Credits to Individuals and Businesses.

They are all 'instruments' of Public Policy that are designed
to Benefit Our Society as a Whole for the Betterment of All.

It's 'is' Our Duty As Citizens in a Capitalist Society to Maximize
Our Individual Return-on-Investment from the Taxes that We Pay
to Our Governments to Better Ourselves in the Interest of Bettering
Our Society. This also applies to Businesses and Corporations Too !

any great society is collectively make up of great citizens ~ RHF
.

DOH ! - That is the 'standard' Business Model for any Patented
{Proprietary} Item that is Licensed - Ultimately the Buyer Pays
the Price for "That Which They Receive".

Point-of-Fact - The FCC mandated that iBquity 'License' IBOC
Technology to All at a Reasonable Cost as requirement of
having the exclusive Right to Digital Signal Broadcast Processing
in the USA for the AM/MW and FM Radio Bands.

IBCO Crock,

Thank you for making my point : Even with Far-More-Choices
FM "HD" Radio is 'tracking' better than FM Radio and FM
Stereo Radio did in they days.

Again - FM "HD" Radio is a competitive product in Today's
Market Place of of Media Choices -and- is doing better than
FM Radio and FM Stereo Radio did in they days with fewer
choices.

my apples are better than your oranges ~ RHF

Another 'option' that 85% of the end-consumers will not use.

I have a CD and Cassette Player built into the AM/FM Stereo
Radio in my Jeep GCL; and all I do is Listen to the Radio
and most of the time it is the AM/MW Band. -iirc- I have not
used the CD this year and I don't even have a Casstte Tape
in the Car.

> > > NON-commercial internet radio which is, frankly, crapola.
>
> - - Wrong. There are plenty of commercial internet radio stations.

- Name a few.

KKSF-FM Radio - 103.7 MHz
http://www.kksf.com/listenlive.html
-Note- Streaming Audio made possible by COMCAST.

KSFO-AM Radio - 560 kHz
http://www.ksfo560.com/article.asp?id=53139
-Note- Listen Live AD for "Home Depot".

The Commerical Over-the-Air "Free" Radio Stations often
have 'separate' $ponsors for their [Listen Live] OnLine
"Internet Radio" Feature.

"Co-Branding" is one method being use to 'connect' with the
Age-20-Something Generation of Radio/Internet Listeners.

We might seem a lot nicer if you would stop spamming this group into
oblivion with off-topic posts about IBOC. If you're going to unload
tons of off-topic garbage in this group, why on earth would you expect
so much as an ounce of consideration? Post this stuff to an
appropriate group and you'll undoubtedly be received differently. Or,
try posting here, only on topic. Do you ever even listen to shortwave?

When I bought my 1978 Dodge lonnnng wheelbase van in 1989, the van didn't have a factory installed radio, it didn't have a radio at all, didn't even have a hole for an antenna.I went to a K Mart store and I bought the lowest price AM/FM/Cassette player radio they had in stock, about $35.00 I think it was.I had to buy an antenna too.I removed the factory (Dodge) cover panel in the dash board and I drilled a hole in the right front fender for the antenna, I got all of that hooked up and working ok.About eight years ago, the radio quit working.(I checked the fuse and wires) I won't install another radio in my van because when I am driving, listening to a radio makes me nervous.

KangarooAsia,

Currently DRM is only about 5% of what is out there to Hear
on the Shortwave Radio : So for 'now' a Shortwave Radio is
good enough to Hear the vast majority of what can be heard.

1 - Start with a good quality 'portable' AM & FM Shortwave Radio
plus External Speaker and/or Headphones.
Use either Rechargeable Batteries or and AC Adapter with it.
- - - In the $150 price range the Sony ICF-SW7600GR is
consider to be a very good Shortwave Radio with AM-Sync.
http://www.universal-radio.com/catalog/portable/0360.html

2 - Next add an External Shortwave Antenna
* Better - 35~50 Random Wire Antenna
- - - Par EF-SWL Antenna is about the right size and works well
http://www.universal-radio.com/catalog/sw_ant/2205.html
* Very Good - Outside Active Shortwave Antenna
- - - Sony AN-1 Active Antenna
http://www.universal-radio.com/catalog/sw_ant/2206.html
* Good - In-Door Active Shortwave Antenna
- - - Sony AN-LP1 Shortwave Loop Antenna works well
http://www.universal-radio.com/catalog/sw_ant/3676.html

3 - Upgrade to a Desk-Top Shortwave Receiver {New or Used}
Example - Icom IC-R75 Receiver {New}
http://www.universal-radio.com/catalog/commrxvr/0175.html
Example - Kenwood R-5000 Receiver {Used}
http://www.universal-radio.com/catalog/commrxvr/r5000.html

enjoy your shortwave radio listening ~ RHF

Shielding and the cost of the HD chipsets will never put HD Radio near
cheap $15 analog radios, plus HD radios require external antennas -
another expense.

The truth is, some, though not all, of NAB's objections are founded.
Sirius DID violate repeater rules.

And as an XM subscriber of some length, I'm not exactly looking
forward to changes in my favorite channels once the merger comes through.

That said, NAB has some worries ahead, with good reasons. And though
analog FM still has better fidelity potential, I'm finding the
programming on XM to be much more satisfying to the 'sell everything
that isn't nailed down and many things that are' programming on
terrestrial radio.

And since terrestrial radio has known for decades that the listening
public was fatigued with advertising overload, they can't say they
haven't been warned.

I"m really convinced, with every conversation I have, with every
listening habit I observe, with new technology that comes on the
horizon, that the future of terrestrial radio, sooner or later, will be
based on conditional access.

iBiquity's own products in development and statements by both Radio
and technology confirm that terrestrial Radio believes so, as well.

NAB...well...sucks to be them.

It's not against Savage.... it'against people who build unviable AM stations
and the fact that AM is dying anyway. News talk is moving to FM, with
stations in Detroit and Indianapolis doing it just this week.

You're assuming here that AM IBOC will continue to advance. It might
not, in which case AM might stand at least a slim chance of survival.

The pacific side of central America is similar to Florida but not the
west or south America. I don't understand why you are keying on central
or south America. I don't know why grounded towers are not used in most
place most of the time.

> >> And why would it be more expensive to do in Central and South

Ground systems are expensive to install. The grounded towers don't
eliminate them they just make them less critical.

> > The logic is why spend money you don't have to spend. The problem

I don't understand where you are going with this. A grounded tower does
not eliminate the ground system it just makes for an easier to tune and
more broad band antenna. The antenna is easier to load properly.

> >> >> A unipois also useful with a shorter than 1/4 wave tower because

I haven't tuned any AM broadcasting towers but I have tuned higher
frequency antennas and I know theory and there are companies that build
kits I described to broaden the towers bandwidth as I described.

So for you to be right the theory as I understand it is wrong, I didn't
understand what was really happening in my past antenna tuning
experience and there are companies out there selling radio stations crap
for antenna modification kits.

So that said where do you think things went wrong?

> >> Go back to Carl Smith's AM antenna and DA handbooks, Unless you find

The ATU can not improve the tower bandwidth. The ATU can only make it
worse.

The ATU's and antenna networks do not improve antenna bandwidth.

> See above. Mechanical stability is the first issue.

1. I was posting about grounded towers not Uniploes.
2. Grounded tower are more stable that isolated ones.
3. I don't where a Unipole would be more of a mechanical design problem
over an isolated tower.

AM broadcast towers zero. I have tuned many other types of antennas and
RF circuits. AM towers tune like any other antenna of its type.

> > An ATU is usually necessary.

Many amateur radio operators don't understand the necessity of tuning
the antenna at the antenna and not in the shack. Usually this is done
for convenience though.

You may be looking at this a little to simplistically. I don't know what
the response time of the transmitter fallback circuitry is and I don't
know when the transmitter modules failed. Did they fail at the turn on
of the IBOC exciter? Did they fail after a while? I don't know the
details.

From what I have seen the coils don't look to hard to fabricate out of tubing but you have to buy the high voltage vacuum capacitors. The connections look like hardware store nuts and bolts would do most of the time. You would most likely need to buy sense transformers for the metering.

That's a good point. I didn't think about flying objects breaking the
tower wires on the extenders. Every engineering solution has its down
side.

<You're assuming here that AM IBOC will continue to advance. It might
<not, in which case AM might stand at least a slim chance of survival.

To the contrary. If there proves to be no way to make AM sound better to the undeer.45 group, AM is over. The band may remain, with niche formats and ethnic and religious offerings, but it wil capture maybe 4% to 5% of all listening, and very little revenue.

> place most of the time.

The Pacific side of Central America consists of a variety of terrain. It is soft loamy soil in most places, with mountains farther inland. The conductivity is high, and it is like the gulf coast of Texas for the most part, as is the Caribbean coast... although that is more tropical rain forrest like, with lower conductivity. In both places, the soil is easy to plow, and it is simple to put in a ground. Unipoles are costly, have to be imported in kit form, and are often not built to fit locally built metric dimensioned towers. In addition, few broadcast engineers know the system. Finally, unipoles, as proven in Puerto Rico and Florida, do not hold up well in hurricane territory.

South America has as much variety of land as the continental US does. Most medium and smaller AMs use shorter towers... I had below quarter wave on all but two of mine in Ecuador due to costs; when I built my first tower in 1964 the only other station with a tower was the government station and the one owned by the two daily newspapers... it was hard to find a crew to rig it and all the sections, then, were imported. With spots at less than a dime at the time, importing anything was a luxury we could not afford. Other stations used longwires between phone poles.... all 40 of them.

Grounds in Latin America, where much of our copper comes from, are dirt cheap. Labor is typically a tenth or less of US costs, the society is not as litigious, so there is no need for insurance, and it is generally very cheap and low tech.
>

> I don't understand where you are going with this. A grounded tower does
> not eliminate the ground system it just makes for an easier to tune and
> more broad band antenna. The antenna is easier to load properly.

Unipoles, like shunt fed towers, are hard to tune. That is why in the US the kits are also accompanied by a visit from a trained engineer who knows how to find the right feed point. While a station engineer can easily tune a series fed tower with simple principles using an OIB, a shunt fed system like a unipole, requires special riggers and special tuning techniques. and is very susceptible to damage in high wind zones.

The broadband aspect is not at all of interest, since almost 100% of Latin American AMs (save a few in Mexico and one or two athat are intentionally directional do cover better the market, not for protection) are single towers, and single towers can easily be tuned to decent characteristics, there is no need for broadbanding and never was one.

If you read the websites, like the Kintronics one, you will see the principal point of purchase is for bad grounds and to enable renting tower space to other customers. It's so hard today to get a tower built, and smaller market radio is such a poor business that the revenue from tower rental is a very important item in most places. Very few single tower AMs are really worried about andwidth a they are so easy to tune with easy to adjust ATU's.

As metioned, the cost of importing (duties of as much as 100% and huge shipping costs) plus the cost of bringing in a specialized antenna is way too much for the perception of minimal gains.
>
> So for you to be right the theory as I understand it is wrong, I didn't
> understand what was really happening in my past antenna tuning
> experience and there are companies out there selling radio stations crap
> for antenna modification kits.

I did not say that. The unipole is 90% of interst for enabling existing towers to be used for other purposes without isocouplers. The remaining 10% is for situations where the ground system is deteriorated and difficult to replace, or the station is on a rooftop and uses a conutnerpise ground, etc. The slight, and barely perceptable bandwidth issue is a tiny sidebar

benefirt... the added bandwith on any tower in use in the US is so minimal
compared to a well tuned series fed tower that this can not alone justify
the change from a standard series fed tower; the time off air is also a
major consideration.
>>
>> The purpose of a unipole is to allow the tower to be at ground potential

>
> The purpose you state may your reason to use a ground tower.

But those are not licensed stations... they are AFRTS staitons on military
bases. US and Latin American commercial stations do not use unipoles
commonly or, in the later case, at all.
>>

>
> The ATU can not improve the tower bandwidth. The ATU can only make it
> worse.

And tower bandwidth at quarter wave and above is adequate for the AM
service. An ATU can take a short tower, using one example of 60 meters high
at 570 AM, that measures 11 ohms -j 110 and make it 52 ohms at carrier,
with only +/- 5 ohms at 10 khz and similarly tolerable reactance... and
pretty decent bandwidth that can be compensated for by a minor amount of
equalization. There is no need to go off the air for days to install and
tune a unipole if there is no perception of gain. In any case, AM is dying
in Latin America much faster than in the US, with many nations like Chile
and Ecuador and most of Central America having fewer stations today than 10
years ago, so any unnecessary investment would be rejected.
.
>>

>> The kind of network and the network design can make a pretty decent

>
> The ATU's and antenna networks do not improve antenna bandwidth.

The only place where bandwidth within the NRSC mask is an issue on AMs that
are directional. and the towers are generally 5% of the issue while the
phasor is 95%. Phasor redesign requres relicencing the directional, and,
gnerally, an antenna proof or partial proof... the time may be many months,
depending on how much air time the station can afford to lose.
>
>
> 1. I was posting about grounded towers not Uniploes.
> 2. Grounded tower are more stable that isolated ones.
> 3. I don't where a Unipole would be more of a mechanical design problem
> over an isolated tower.

Shunt fed towers in the US are not licensed; I don't know if one could even
get a waiver to use one. Outside the US, the tuning requires riggers on a
live tower, and that is much more complicated than a simple series fed
system that does everything for less money. There are few who even know how
to find a match point on a shunt fed tower while anyone with an OIB can tune
by trial and error a series fed tower.
>
> AM broadcast towers zero. I have tuned many other types of antennas and
> RF circuits. AM towers tune like any other antenna of its type.

Due to the wavelengths involved the huge amount of land needed for the
ground, etc., AM antennas are rather unique... and when you get to
multi-tower directionals, even more so. Doing a full FCC directional proof
may take weeks, and adjusting a critical array months. One construction
permit, for 10 kw night operation of WISN in Milwaukee, took nearly 2
decades to build and adjust and get tuned to operate legally.
>

> You may be looking at this a little to simplistically. I don't know what

> of the IBOC exciter? Did they fail after a while? I don't know the
> details.

No, they failed due to an improper instruction in installation instructions
regarding the interface between the transmitter and the HD exciter which,
basically, caused the power modules (there are 128 for 50 kw operation) to
overdrive and literally burn out. In this case, the problem was not
corrected by the fialsafe circuitry as it essentially defeated it rather
than interfacing a second system with it.
>

> metering.

Most metering today is an RF ammeter at the doghouse and, for directional stations, an RF sampling system which allows phase and current to be detected for each tower. Neither is very expensive. With pretty simple components, even things like diplexers can be built, too. Remember that most directionals and even ATUs in use in the US were built before computers could assist in the design. The diplexer shown on my website, built in 1966, was entirely calculated and designed using a slide rule and a notepad... this is one of the reasons why highQ networks were preferred as they were easy to design and tune in the field.

Then you will appreciate this: after one of the major gulf coast hurricanes, in the 70's, an engineer from Miami was hired to settle some tower destructions. One, which failed at about 80 feet and collapsed was examined. The measurements on the damaged section that caused the failure exactly matched the shape and mass of a cow which had been picked up and hurled into the tower 80 feet over the ground. You can not designee for the occasional flying cow.

* Is small, compact size important?

* Do you need "dual receive", with independent volume controls for
each band?

* Is an add-on alkaline battery case for emergency backup important?

* Is full 5 watt output important in your area?

The local ARES uses Yaesu FT-60Rs. They seem pretty sturdy, and you
can purchase an alkaline battery case for extended operations long
after the rechargeable pack runs out.

IBOC Crock,

The Real Cost of Pocket Radios : AM > AM/FM Stereo > "HD" AM/FM
Relative Price = Relative Cost = Relative Value -wrt- Inflation and
Time

9 Years Ago Todays $15 would have been $10 in 1998
? What Kind of "HD" AM/FM Pocket Radio

could you buy for $10 in 1998 ?
* In 1998 had you paid $15 for an "HD" AM/FM Pocket Radio :
Today in 2007 it's Real Cost would be Adjusted to $23.
- - - Oops -but- they did not have "HD" AM/FM Pocket Radios in 1998.

22 Years Ago Todays $15 would have been $5 in 1985
? What Kind of AM/FM Stereo Pocket Radio
could you buy for $5 in 1985 ?
* In 1985 had you paid $15 for an AM/FM Stereo Pocket Radio :
Today in 2007 it's Real Cost would be Adjusted to $44.

54 Years Ago Todays $15 would have been $1 in 1953
? What Kind of AM Pocket Radio
could you buy for $1 in 1953 ?
* In 1953 had you paid $15 for an AM Pocket Radio :
Today in 2007 it's Real Cost would be Adjusted to $199.

"News/Talk/Sports:Radio's Last Bastion"

"Music FMs of any flavor are utterly screwed... Right now -- while FMs
are losing the music audience to new media -- satellite radio is
offering more News/Talk/Sports programming than we can fit on AM
radio..."

http://ftp.media.radcity.net/ZMST/daily/IS031005.htm

"The Last Days of AM Radio?"

"Sports, all-news and talk programming continue to draw large
audiences to the AM band in most big cities..."

http://blog.washingtonpost.com/rawfisher/2007/09/the_last_days_of_am_radio.html

"News/Talk/Sports Tops Radio Formats, Interep Analysis Reveals"

"The latest share numbers place the News/Talk/Sports format at the
top, pulling in an average of 17 percent of listenership among persons
age 12-plus, based on Arbitron figures for total radio listening in 92
continuously measured metros. That share number is even higher than
levels seen last spring, when the war in Iraq began. According to
Interep, more stations than ever are programming News/Talk."

It's the programming stupid, not the audio quality:

"Creating the Future of Radio"

"After all, digital sound quality is not what's driving Satellite and
"digital" per se is not a consumer benefit. The text services are
interesting, but will not be unique to HD Radio. The ability to record
our stations only matters if we offer content worth recording. And
when every station becomes several stations we are buying more shelf
space, but it's on an infinitely larger and more competitive shelf."

http://www.hear2.com/2005/04/creating_the_fu.html

Ever wonder, why 15 million listeners are willing to spend $15/month
on Satellite Radio, and that the majority of Ford's now have factory-
installed Satellite Radio, that Ford's premium models (which
constitute 40% of its sales) will have STANDARD Sync, that Hyundai
gave up on HD Radio and now have standard Satellite Radio.

1818. Mr. "Eduardo" reserves a special vitriol for AM radio in general....

Newsgroup: rec.radio.shortwave
Date: 2007-10-12 12:04:06 UTC
From: IBOCcrock <ibocisacrock@yahoo.com>

Source record: 127688

Hippoman, I enjoy the "tacky theater" of carney-Barkers as much as anyone, but an Eduardo/Gleason sideshow would be a little harder to take. Let's imagine the pitch from a tattoo-festooned Mr. David (may God forbid):

"Step right up, morons, and witness the DECLINE AND FALL of an entertainment medium YOU USED TO LIKE, BUT NOW DESPISE, like me!! You're all hopelessly stupid, so c'mon up here and give it a whirl - fritter away the HARD-EARNED CASH you scrape from your PITIFUL, MISERABLE, NO-FUTURE hourly jobs, while you stuff lard-and-salt filled MIDWAY-TYPE ALLEGED-FOOD down your pitiful fat little kids, who EVEN AS WE SPEAK are SILENTLY SUFFERING the premature onset of diabetes and arteriosclerosis BECAUSE OF YOUR LACK OF PARENTING SKILLS!!" Etc., etc......

Y'know, even though Mr. "Eduardo" reserves a special vitriol for AM radio in general, and analog AM radio (and its licensees) specifically, he doesn't even appear to like FM that much either.

I think Captain Spanglish is symptomatic of the type and quality of radio industry executives who have produced the unhappy near-term future which - if pundits are to be believed - is casting a pall of gloom over AM & FM radio. They sit enthroned in powerful positions they've demanded for themselves via lobbyists and a hapless, compliant FCC, pontificating endlessly about Arbitron PPMs, the dogma of HD, whining about competition from satellite they've brought on themselves, all the while trashing the human components of creative people and...ahem....LISTENERS, whom they alternately condemn and ignore. Small wonder they've run out of ideas about how to make the medium work.

You're the third person to recommend the FT-60R to me, so I'll
definitely look at it closely. Compact size isn't too important,
though it's a plus. I probably do want the full 5 watt output on both
bands, if only because lots of HT's offer that and, while I might not
need it in my home area, I move around enough for it to matter.

The interview with Mel Karmazin by Charlie Rose was rerun last night.

He made a good point...NAB's insistence that the Sirius-XM merger be denied as anticompetitive is actually making the case FOR the merger. NAB doesn't file on other alternative media. Because they don't see them as competition. Sirius-XM, they see as serious competition. Demonstrating that Sirius-XM, if approved, would not be an anticompetitive move.

I'm not sure that having a single satellite company would be the best way to go, but NAB, by it's filings against both the merger, and the operations of the companies independently over the last several years, really does underscore how much a threat NAB sees in satellite radio.

Which makes the radio stations that were so eager to take XM money during the initial medial blitz look like real bonefarts. Every spot that ran, literally, they sold listeners away.

Only marginally better than listener WLS gave away in the late 60's and 70's with every FM radio they awarded as prizes.

Back to the point, Karmazin said that terrestrial radio will always be around, but in a business context, it's a zero growth industry. Strong, but no growth. And he specifically referred to AM and FM radio stations.

I have no doubt that AM radio stations are going to have a tough time in the coming years. But I'm also not inclined to dismiss what Karmazin says, lightly. Above all else he's a Radio guy. And as a

businessman, he doesn't back losers.

Further, he underscored something presented here. that digital alternatives to analog audio from broadcasters will be a backward step for revenues. "Analog," he said, "equates to dollars. Digital equates to dimes." That digital alternatives to analog broadcasting do not have the listener support to command decent advertising rates. That every listener lost by analog radio to digital alternatives represents revenue lost that cannot be recovered. Even if that listener moves from analog to digital within the same company, it still represents a loss.

He went on to say that companies HAVE to do this. The audience has become hooked on digital on-demand services. They want what they want when they want it, but that for the foreseeable future, there is only loss in it.

He did make references to a number of digital technologies, in this statement, including HD radio.

Funny, I owned FMs in Ecuador in the Sierra, and they worked just fine except for small pockets that did not warrant boosters. Of course, you may think the hills you live among are more significant that the Andes, where some of my transmitters were at heights approaching 4000 meters, but that's your problem.

1826. DX302 re-align

Newsgroup: rec.radio.shortwave

Message-ID: <akLPi.447486$p7.10101@fe2.news.blueyonder.co.uk>
Source record: 127698

Hi all,
Amongst others I use a Realistic DX302.
on AM and USB its fine, but in LSB it is out by 1Khz or 2Khz depending
on where I am example 3.565 LSB on my DX394 (accurate) is actully 3.564
LSB on the DX302 on 7.090 LSB DX302 is 7.092 on DX394.

IS there any one in the UK who can re-align this DX302 please?
The DX032 came from eBay as I say the only problem is on LSB I do want
this to be as accurate as possible.

TIA,

Mike.

If AM stations slowly die out, I assume the AM band would get
reassigned to some other purpose. The 1.7 megahertz wide channel
would be perfect for a single DAB multiplex carrying ~10 separate
channels.

(sigh). I made a simple request: Name a few Internet stations (not FM
or AM stations), that are commercial.

Are you not capable of doing that? Do you want to retract your
statement, "There are plenty of [non-FM or AM] commercial internet
radio stations," as false?

WELL MAYBE THEY ARE RIGHT ABOUT YOU TOO. Maybe you really are a
"pathological liar", who "fakes his resume", and is actually "not
working in radio". Someone they call "ed-tardo" instead of his proper
name.

Should I believe these guys when they say all these things about you?
And, why do you just sit-back and tolerate all their insults??? Are
you yellow? Too cowardly to stand-up against the constant hail of
insults the people on this group keep throwing at you??? NONE of them
listen to anything you say, so why do you waste time trolling to
people who clearly despise you?

You're like the rec.arts.shortwave doormat.
People here walk all over you,
and you don't seem to care.

Illogical.

Like a dog who keeps returning to his master, so he can get beat some
more.

You obviously haven't been reading my previous posts on this subject. When Tardo first arrived here he was just your garden variety troll. He spammed the daylights out of this group, pretty much the way you do. And he still spams, but over time he and this group have developed a kind of symbiotic relationship. Tardo needs attention---lots of it--- and he's willing to say whatever it takes to get it, no matter how demeaning or absurd. While the result is still a lot of spam, it is at least entertaining spam. The result? Tardo gets the attention he craves and everyone else gets to share a good laugh. It's a win/win!

I guess WOXY would be one example.

>From Wikipedia:

WOXY.com, "the future of rock and roll," is an Internet-only
alternative, independent, and freeform rock and roll radio station
based in Cincinnati, Ohio. Previously known as 97X (WOXY-FM, at 97.7
FM), the station was one of the first in the United States to
completely transition from terrestrial FM radio to broadcasting solely
as an Internet radio station.[1]

Oh, and by the way, if anyone wanted to they could setup their own
internet radio station in an afternoon and sell advertising. Talk
about low overhead!

>From ubroadcast.com:

Can I make money with ubroadcast?
Yes! In addition to advertising your own product or service, and
linking listeners to your web site that sells products, you can sell
"commercial" space to Local, National or International sponsors of
your choice. You determine what to charge for these commercials and
how often they play on your station.

Have you ever even surfed the web, you idiot?

Some of the people in this newsgroup DO have good manners.That's not to say I am one of them though.
Just like Joyce Creel used to say when I worked at the auto/truck/lawn mower battery factory that used to be in Florence,Mississippi, she would say, Now, how are you going to act?

First, we are talking a decade or so... while AM is nearly dead for those under 45 or 50, there is still listening in the senior generation. Add to that the ethnic, religious and brokered operations and there are plenty of AMs that make some money... they just don't compete for listenership. As long as the mail order ministries exist, AM will exist also.

ICE 182A Isolation unit, Beverage Matching Unit, 0.1-30 MHz (List: $39.00)

Information from their web site:
http://www.iceradioproducts.com/reconly.html#Beverage%20Matching

The unit is in near brand new condition.

MFJ 16010 Random Wire HF Antenna Tuner (List: $69.95)

Information from their web site:
http://www.mfjenterprises.com/products.php?prodid=MFJ-16010

The unit is in good condition. I have made markings on the bottom to
indicate the schematic and other information about the unit.

I will sell both units together for $55.00 and I will pay shipping. I prefer
money order but will accept a personal check. If you pay by personal check,
I will wait for the check to clear before sending the units.

Will consider trade for Icom R75 filters. If interested, contact me at:

aburzynski at satx dot rr dot com

I am not a dealer or reseller.

Music related FMs are screwed from iPods, cell phones, Satellite Radio
- AM news/talk/sports have no competition, thus news/talk/sports on
the 50kw AM stations is alive-and-well.

"News/Talk/Sports:Radio's Last Bastion"

"Music FMs of any flavor are utterly screwed... Right now -- while
FMs
are losing the music audience to new media -- satellite radio is
offering more News/Talk/Sports programming than we can fit on AM
radio..."

http://ftp.media.radcity.net/ZMST/daily/IS031005.htm

"The Last Days of AM Radio?"

"Sports, all-news and talk programming continue to draw large
audiences to the AM band in most big cities..."

http://blog.washingtonpost.com/rawfisher/2007/09/the_last_days_of_am_...

"News/Talk/Sports Tops Radio Formats, Interep Analysis Reveals"

"The latest share numbers place the News/Talk/Sports format at the
top, pulling in an average of 17 percent of listenership among
persons
age 12-plus, based on Arbitron figures for total radio listening in
92
continuously measured metros. That share number is even higher than
levels seen last spring, when the war in Iraq began. According to
Interep, more stations than ever are programming News/Talk."

ICE 182A Isolation unit, Beverage Matching Unit, 0.1-30 MHz
(List: $39.00)

Information from their web site:

http://www.iceradioproducts.com/reconly.html#Beverage%20Matching

The unit is in near brand new condition.

MFJ 16010 Random Wire HF Antenna Tuner (List: $69.95)

Information from their web site :

http://www.mfjenterprises.com/products.php?prodid=MFJ-16010

The unit is in good condition. I have made markings on the bottom to
indicate the schematic and other information about the unit.

I will sell both units together for $55.00 and I will pay shipping.
I prefer money order but will accept a personal check.
If you pay by personal check, I will wait for the check to clear
before sending the units.

Will consider trade for Icom R75 filters. If interested, contact me
at:

Well, thanks for the replies. I learned a few things. It was an
interesting discussion.

I have thi beautiful,working 100% AOR 7030+ Shortwave receiver that has been working flawlessly. It really is a great radio that can recover audio almost has good as the R-390. I am selling this radio, because in the last few days Ten Tec has dropped the price on their RX-30 nearly $800.00 . I am making my move to buy one and is not contingent on the sale of this radio. Radio is complete with everything I received from AOR to include receipt. This is a well taking care of radio...just excess now...excellent radio..heard Croatia and Germany on MediumWave and more. I like to get $1,180 or $1,150 for non paypal users...tou send me a Postal Money Order for $1,050 and I will ship to you tracked and fully insured...most of all properly packaged. Please e-mail me for any questions or photos kyw1060@verizon.net see also KYW1060 user name on Ebay and KB3IUL as a trusted radio operator. No mods, never a thought to even open this up,

> the 2007 Nobel Peace Prize. Details soon.

While it's certainly open to debate whether global warming falls under the purview of a peace prize, there's no question that once it's decided that the prize goes for that, Albert Gore Jr. is deserving of it.

The idea that global warming is liberal bias is preposterous. Global warming is occurring, and the majority of that warming is anthropogenic, and this is the consensus of climate scientists. None of this is controversial in scientific circles, or at least no more controversial than most generally-accepted theories.

Recent data suggests that warming is increasing faster than predicted because the melting of ice is releasing additional C02 and methane trapped under the ice from biomass frozen under the ice.

This could easily be the most serious threat that humankind has ever faced.

So for Gore's tireless crusade to call attention to this issue, and for his taking the initiative for creating the Internet by sponsoring the bill that funded DARPAnet, the experimental government research program which created the Internet, he certainly seems to be a visionary and a strong contributor to making the world a better place.

This Gore-hatred is sick. He's a great man, and this country should be proud of his winning this prize, not being a bunch of narrow-minded ill-informed yahoos seeing things as liberal vs. conservative when its really well-supported facts vs. junk Exxon science and fringe solar theories that are not accepted.

Al is mentally ill.

I'm all in favour of global warming! One must remember that as recently as
20,000 years ago, where I'm sitting here in Michigan there was a sheet of ice a
mile or so thick.

Yep, seems not long ago that the so-called-scientists were predicting global cooling.

Now, we've a new bunch of kooks, led by a fellow who had to undergo a lot of therapy because he lost an election. Al is mentally ill.

First off there is no proof that man is responsible for climate change.

Second the liberal socialists are pushing this as an agenda against
capitalism. It's right out there in the open. The fact that you don't
get it is preposterous.

Third Nobel Peace prize committee decided to ignore their charter.

Fourth Al Gore is a nut case.

Fifth Al Gore generates more green house gas than most people.

So the Nobel Peace prize committee ignored their charter to give a prize
to a "do as I say, not as I do" liberal nut case and a cadre of useful
idiots termed as UN climate scientists.

Fact: "With the release of the revised statement by the American Association of Petroleum Geologists, no scientific bodies of national or international standing are known to reject the basic findings of human influence on recent climate."

Fact: If you disagree with most scientists, then who's the crackpot? Sure isn't Gore. He's merely stating what most experts believe, for the most part.

If we have most of science on one side, and a bunch of right-wing lunatics on the other, it's pretty obvious who's wrong.

You are. Wrong.

Fact: A question which frequently arises in conveying the scientific opinion to a broader audience is to what extent that opinion rises to the level of a consensus. Several scientific organizations have explicitly used the term "consensus" in their statements:

* American Association for the Advancement of Science: "The conclusions in this statement reflect the scientific consensus represented by, for example, the Intergovernmental Panel on Climate Change, and the Joint National Academies' statement."[24]
* US National Academy of Science: "In the judgment of most climate scientists, Earth's warming in recent decades has been caused primarily by human activities that have increased the amount of greenhouse gases in the atmosphere. ... On climate change, [the National Academies' reports] have assessed consensus findings on the science..."[25]
* Joint Science Academies' statement, 2005: "We recognise the international scientific consensus of the Intergovernmental Panel on Climate Change (IPCC)."[26]
* Joint Science Academies' statement, 2001: "The work of the Intergovernmental Panel on Climate Change (IPCC) represents the consensus of the international scientific community on climate change science. We recognise IPCC as the world's most reliable source of information on climate change and its causes, and we endorse its method of achieving this consensus."[27]
* American Meteorological Society: "The nature of science is such that there is rarely total agreement among scientists. Individual scientific statements and papers-the validity of some of which has yet to be assessed adequately-can be exploited in the policy debate and

can leave the impression that the scientific community is sharply divided on issues where there is, in reality, a strong scientific consensus. ...IPCC assessment reports are prepared at approximately five-year intervals by a large international group of experts who represent the broad range of expertise and perspectives relevant to the issues. The reports strive to reflect a consensus evaluation of the results of the full body of peer-reviewed research. ... They provide an analysis of what is known and not known, the degree of consensus, and some indication of the degree of confidence that can be placed on the various statements and conclusions."[28]

The idea of global cooling was never more than speculation. To equate it, drawn the level of evidence and knowledge from the 1970's with the vastly greater evidence (especially after global ocean-depth temperature measurements were made in 2003) for global warming, is just preposterous. Nothing less. It's a fact. You cannot possibly read the facts and disagree:
http://en.wikipedia.org/wiki/Scientific_opinion_on_climate_change

To summarize:

You're not

Where do you get your information? It may be worth seeking out
higher quality sources, because even trying to pass off how science
works as a primarily political matter looks ridiculous to anyone who
has had any experience in the sciences. The ONE unpardonable sin in
science (besides outright fraud) is to jump to unwarranted conclusions
because of political pressure. No reputable scientist or scientific
body is going to make rash unsupported statements about global warming
being a scientific consensus unless it really is.

Geeze, you can't really buy into that desperate "liberal scientific
conspiracy" crap? What you call liberal bias is actually the fact that
the facts disagree with your ideology, because your ideology is not
based in reality.

If believing the majority of experts in the field makes one a lunatic,
wow, we've just landed in upside-down world.

If believing that global scientific consensus is a political process
isn't nutty, I don't know what is.

I think little Bush will go down in history as the worst president we have ever had.

When I think of all the lives lost as compared to just staying out of the mess.
Those people have been fighting from BC and they have not slowed down yet.
If we had stayed out there would have been just as many of "them" dead from their own people as we have killed.

And don't say nothing about "Blackhawk" they do what has to be done and they ARE GOOD PEOPLE!

Proud to be,

Just plan Burr

I recall some info that came out after the 2000 election and was published in USAToday. It indicated that those who voted for Bush had a higher level of education than those who voted for Gore.

And, that's easy enough to believe. Just look at who makes up the Liberal/Democrat constituency!

Ironic that someone who cannot spell the word "are" or use the word "or" after "something" would refer to anyone as a dumb ass. At least using the words in the proper usage would be nice. Not to mention you forgot to insert "your" before "status" so I'm not sure what your issue is. However, it might be some food for thought before calling anyone a DUMB ASS.

Try again.

1908. Re: Oops ! - It Happen on eBay Again - Oh No I Paid Too Much !

Newsgroup: rec.radio.shortwave
Date: 2007-10-13 11:32:36 UTC
From: Barry in Wyoming <barrywohl@gmail.com>
Message-ID: <1192275156.895181.71070@i13g2000prf.googlegroups.com>
Source record: 127828
Cross-posted to: rec.radio.shortwave,rec.radio.swap

I don't know, RHF. I've got an R8B I purchased directly from Drake, one of the very last. Both Drake and Universal discontinued sales a week or two after I bought mine. Mine is NOT NEW IN BOX but has sat on a table in my bedroom getting occasional use. I've got the VHF unit, Drake installed when new, and one of Mike's metal tuning knobs. I've got the service manual and the IR remote thingie (never used) and some programming software. I've got more than $1725 in the radio and were I to sell it, I'd love to get $1725 or more, but I wouldn't consider it a "rip-off."

Most of my casual listening is on an Eton E1 to local FM (NPR) or C-SPAN (XM). At least once a week I listen on the R8B. It's nice for me to own such a great radio, and were I cruising eBay, I'd not consider $1725 too much.

I've got an almost real NEW IN BOX ICF2010, just opened twice, once by Craig at Kiwa to install his casual FM and serious SW mods, and once by me to check the work. I've got about $500 in that radio and, if I were to sell it, I'd home for $500 to $700. It isn't for sale either. Someday, my bride might sell it at MY estate sale.

Your general point that eBay can be a buyer's rip off is correct. Maybe the buyer of this R8B paid too much. He might have put that $1725 towards a BRAND NEW WITH WARRANTY 756PROIII or something similar, but he might have wanted to grab the R8B while available.

1909. Re: VHF/UHF handheld transceiver recommendation

Source record: 127829

My wife and I each own Kenwood F6A handhelds. I really like it even for FM satellite use. Lots of memories. More compact that my Kenwood D7A (although the D7A offers full duplex for satellite work and the F6A does not).

One warning about the F6A. You can run it on alkalines, but the Kenwood alkaline battery pack only permits low power transmit. I love this radio, though.

Hmmm. I'd rather see the FCC re-purpose the band for a DAB multiplex,
and then reassign the local AMs to DAB.

DRM is not using a sideband; to do analog and digital requires a separate
transmitter for each on a separate carrier frequency. HD is a combined
analog and digital signal on the same carrier frequency. DRM is digital
only... if you want analog, you have to have a separate channel, close to or
not to the DRM one.

```

Exactly. DRM is a separate signal that can go wherever the operator chooses. He may elect to place it next to his AM transmitter or the regulator may force him to place it there so any interference will be to his own service. Whatever, the signal will appear at only one point in the spectrum. It is not a sideband of the AM.

HD, on the other hand is an actual sideband of the AM carrier. There are two digital channels available, the primary and the secondary. Each of them occupies 5kHz either side of the AM carrier, the primary from 10 to 15kHz, and the secondary from 5 to 10kHz. The HD signal is irrevocably combined with its host AM service.

That's not an equivalent. Above you advocate vigilante murder and mayhem
and in the latter you advocate taking criminals off the street for a
time after being proven guilty of a crime by a jury.

If you think the KKK treatment is OK then you are as evil as they are.

< Snip >

The problem with this thinking is that the terrorists have an agenda
that includes killing innocent Americans so the Bush made the choice to
bring the fight to them in Afghanistan and Iraq. If he sat back like
Clinton did the terrorists would be killing more innocent people on this
continent after 9/11. There is no choice to fight because given the
chance they will kill us.

Well, there is one other option and that is for the country to
capitulate and everyone convert to the Muslim faith. You like that
choice?

You will notice that the war of aggression worked well but the aftermath
of getting a democratic regime on its feet is a different problem
because it depends on the Iraqis. There is not much you can do to plan
another peoples success.

Has anyone been listening to the Iranian propaganda on SW?

Ok, here is a difference you should understand. DRM uses two separate
transmitters and antennas one digital and one analog. HD uses two
different exciters one digital and the other analog that input into the
same transmitter and antenna at the same time.

I understand what you are saying and I wish I could totally agree but, we
have lost so many Americans and "I think" we were lead into this war by lies
of WMD.

It's just very hard to trust or believe in someone who may be lying to us.

IF, we close our borders to all the lying trash that is coming in to America
and start responding to people who want to do us harm.
We have our nose in every countries business when we can't take care of out
own.

I can be hard line.

Is there enough proof to justify an attempt to reverse the effects?

Yes and no.

A prudent society should have acted...just in case the anthropogenic
theory is valid. But I think it's way too late. Your precious
capitalism is obsolete, as you (I) are (am).

You know who I instinctively distrust? It's liberals. Those people will
say anything to make a point and that's where this lying idea came from.

Ask yourself, logically, does it really make sense that the Bush
administration would lie about the prewar intel? Do you remember what

the turn coat liberals in congress said prewar?

From Wikipedia
San Gorgonio Mountain (or Mount San Gorgonio, or Old Greyback) is the
highest peak in Southern California. It is located in the San Bernardino
Mountains, 27 mi (42 km) east of the city of San Bernardino and 12 miles

(19 km) north-northeast of San Gorgonio Pass. It lies in the San Gorgonio Wilderness, part of the San Bernardino National Forest. Spanish missionaries in the area during the early 1800s named the peak after Saint Gorgonius.

San Gorgonio Mountain, California 11,499 feet, 3505 meters

1939. AM Broadcasters Back Away from HD Deployment

Newsgroup: rec.radio.shortwave
Date: 2007-10-14 01:27:54 UTC
From: IBOCcrock <ibocisacrock@yahoo.com>
Message-ID: <1192325274.951093.112020@i38g2000prf.googlegroups.com>
Source record: 127960

"AM Broadcasters Back Away from HD Deployment"

According to a leaked memorandum from ABC/Citadel's executive chief engineer, all AM stations in the company's stable have ceased broadcasting in digital at night, effective immediately. The memorandum does not give specifics, but follow-on reports cite interference between AM stations on adjacent channels as a major factor for the decision. Interestingly, some suggest Citadel executives knew such a problem might be in the offing, but they went ahead and turned on their digital signals at night anyway.

This is a major setback for the adoption of HD Radio, especially on the AM dial, and Citadel is the first large broadcast conglomerate to back away from full deployment of the HD broadcast technology. Although the company's gone out of its way not to characterize its move an indictment of iBiquity's proprietary digital broadcast standard, the problems with AM HD broadcast interference are well-known and -documented.

Apparently, since the FCC's authorization of nighttime AM-HD broadcasts earlier this year, the number of complaints about interference between stations has risen dramatically, and affects all classes of AM stations - from the 50-kilowatt "clear channel" blowtorches to the smallest operations.

Because the interference potential of HD Radio signals (and especially AM-HD signals) is a fundamental flaw of the technology itself, it's hard to see how a "workaround" might be produced to fix this problem, outside of going back to the drawing board and redesigning the entire HD broadcast protocol to not be as bandwidth-hungry as it is. HD-capable AM stations have already squeezed the bandwidth of their analog signals in order to accommodate the HD sidebands, even beyond the point of fundamentally degrading analog audio quality. Since a wholesale redesign of the AM-HD protocol is highly unlikely, perhaps AM stations should consider HD alternatives instead? Unfortunately, the FCC does not seem predisposed to consider this.

As radio's technology of the future, HD could very well be a waste of time: listener knowledge about and adoption of new HD-capable receivers is abysmal (more people listen to Democracy Now! every week than listen to a digital radio broadcast); the price and quality of said receivers is mostly-abysmal; and even broadcasters are coming around enough to openly admit that AM-HD is an afterthought - radio's digital future will almost entirely exist on the FM band. This is a major factor, I believe, as to why the NAB and its member-stations are pushing so hard for the FCC to freely give FM translators to AM

stations.

Interesting article about Greenland and Large Moulins (Holes in the
Glacier)

Some of the moulins in Greenland run on the scale of Niagra Falls and
are helping the glaciers
to move at three times the rate that they did previously.

What with this and IBOC whats the use"

Broadcasters may lose battle to expand 4-10 MHz allocation
October 13th, 2007 - 10:51 UTC by Andy

On 22 October, 190 nations will gather in Geneva for the quadrennial World Radiocommunication Conference, which allocates global radio frequency spectrum. Richard Russell, the US ambassador to the conference, describes it as the Spectrum Olympics.

It's already looking as if shortwave broadcasters will lose the battle with military users over spectrum used for high-frequency communications in the 4 to 10 MHz bands, Russell said. The broadcasters want to use this band to replace their analogue broadcasts DRM services. But the US Navy wants to use the HF bands - underutilized since the demise of Morse code - to support the broadcast of data over new IP-based services at far less cost than sending data by satellite.

Russell said that except for the European Union, countries are heading into the WRC aligned with the US position to not allow an expansion of shortwave brWhat with this and IBOC Whats the Pointoadcasting in the HF band.

Don't be apologetic; you are absolutely right!

Telamon wrote:

> Ask yourself, logically, does it really make sense that the Bush
> administration would lie about the prewar intel?

Well, YES it does...many admit the facts were twisted (remember Colin Powell?), and being in fear of their careers, they told the boss what he wanted to hear.

NO yellowcake (admitted to by everybody)

NO WMD (admitted to by Bush on national TV)

NO Al-quaida tie-in (admitted to by Chaney on national TV)

"Saddam is a bad guy" -- So what? The world is full of bad guys, and Saddam's been dead for a couple of years anyway.

Bottom line: The WRONG war in the WRONG country for the WRONG reasons.

Thousands of Americans dead, ten thousand Americans mutilated, half a TRILLION(!) U.S. dollars down the drain, a -sovereign- nation utterly trashed for no reason, every retired General saying it's a crock of shit, no end in sight.

So, please, tell me why we are there...

P.S. Use your cowardly <Plonk> on me if you must, but just remember that Burr started this thread and I am only responding (just as you did). :-)

Source record: 127983

http://global-warming.accuweather.com/2007/10/what_is_a_moulin_1.html

Professor Robert Correll, chairman of the Arctic Climate Impact Assessment

http://www.acia.uaf.edu/

said that newly invented ice penetrating radar showed that the melt water was pouring through to the bottom of the glacier creating a melt water lake 500 metres deep causing the glacier "to float on land. "These melt water rivers are lubricating the glacier, like applying oil to a surface and causing it to slide into the sea. It is causing a massive acceleration which could be catastrophic."

Correll stated that one particular glacier puts enough fresh water into the sea in one day to provide drinking water for a city the size of New York for a year.

Correll believes that the estimates of a 20 to 60 centimeter sea level rise this century from the IPCC report in February had been "conservative" and feels that it would be at the upper end of this range at a minimum. Some scientists fear that number could be 2 metres (200 centimeters), which would obviously have catastrophic effects for European and U.S. coastlines.

1963. Re: (OT) large Moulins in Greenland causing an Alarm

Newsgroup: rec.radio.shortwave

A moulin is the name for a giant hole in a glacier in which millions
of gallons of melt water can cascade through to the rocky surface
underneath the glacier during the melt season.

Why am I bringing this up now?

It's hard enough getting to work on The Subway, filled with filth,
panhandlers, Kids with Drums, Standing room only.

If the FKUCING Glacier melts, the subways will flood, and we'll all
have to commute by Rowboat..

(Then again, the kids with drums will all drown . .)

Happy Sunday . .

Howash. This has all happened before and is part of a very large cycle.

Take your man-made global warming on a long hike.

Well then contribute something of interest. Stop being a bloodsucker such as Mike Terry who is always 'looking' for information rather than contributing anything. In other words, don't be a 'lurker'.

The HD Cartel would have you believe iBiquity's silly deal with Ford were something of import. As we know, it's not. Funny, none of the "HD" Cheerleaders are talking about another media-related technology being rolled out, also coincidentally by Ford:

http://gormanmediablog.blogspot.com/2007/10/blog-post.html

Here, you'll find two videos. Decide which you'd rather have in your vehicle. 36,000+ worldwide channels or the "Eric and Kathy More Music Morning Show"? You make the call. Those of you who have never had the "HD" Radio experience while driving can learn everything you need to know here. No need to spend $300 at the dealership.

In case anyone from the HD Pep Squad missed it, the gentleman from Ford said Sync would be available THIS year-- in the Fall. I'm no iBiquity engineer, but according to my calculations that would be around now.

I wonder if Mr. Jablonski (or anyone else of import from Ford) has taken the time to do a video demonstration of the costly "HD" dealership-only option.

Ford laughs all the way to the, well, nobody in Detroit is laughing right now-- but the "HD" deal actually DOES make sense for the motor company. Ford has to do absolutely NOTHING. Literally. No inventory, no promotional costs, no manpower-- NOTHING. In return the company gets millions in free radio advertising thanks to the HD Cartel, which'll prostitute itself out in any kind of "trade" deal in hopes of getting more than ten people to understand what the hell "stations between the stations" means.

With any luck, the HD spots WILL get someone out to his local Ford/ Lincoln/Mercury dealer. That's where he'll learn about Microsoft's Sync...

It's overhyped when it claims it's more stable ; the JPS/Timewave stays fixed to a very fine degree over weeks. The weakness of the JPS/Timewave ANC-4 is that the controls (particularly phase) need some kind of bandspread pot for fine adjustment ; and that over time the pots get scratchy (albeit fixed by Deoxit spray).

Voltage controlled phase sounds intrinsically less stable to me, but what do I know.

I assume, but do not know, that the ANC-4 just combines a direct signal with one that goes thru a capacitor, varying the combination with a pot, to change phase. And another pot for gain. This is then added to the other antenna.

There is nothing I can do to solve your lack of intelligence or
ignorance. You did not respond like I did as what you posted is total
partizan motivated ignorance.

There is no excuse for what you posted as you have have an Internet connection and radios just like I do and so have the ability to do your own research just as I have done but you don't due to lack of any ability to comprehend what you read or you have just decided to believe in the liberal agenda and behave as a useful idiot.

I'll just post links two example links to the "NO yellowcake (admitted to by everybody) comment above as an example for you to follow.

Conservative link
<http://www.americanthinker.com/2005/07/about_that_500_tons_of_yellow.html>

Liberal link
<http://www.commondreams.org/headlines03/0624-09.htm>

So you see conservatives and liberals agree that after we rolled through Iraq it was found that many drums of yellow cake were around an old reactor site that the Israelis bombed years ago. During the active part of the war apparently the Iraqis dumped those barrels over in order to find out if something valuable was in the restricted site just like any ammo dump, businesses were looted.

But you are way to stupid to find these things out for yourself. It's easier to write ignorant posts to Usenet.

Now go figure out how the other comments you made above are on an even greater level of self delusion if you can.

I don't know. I tried there phone numbers but I can't get through as it
is always busy. It appears the transmit power just took a permanent
drop. They are normally -60 to -65 dB and now its at -80. The audio
breakup seems to have stopped but now there is a continuous hiss in the
background.

Replying to my own post, I noticed they turned off their IBOC signal.

How do we know that they are not at the temporary site? They may be having
some issues there... I am not sure what they have installed as an aux,
either, The towers there are from the 30's, too.

I understood they had a full 50 to install at the Montecito location, and
then were going to leapfrog the auxiliary transmitter there while Buena Park
is getting a new tower. They might be on a lower power, or they may just
have trouble still at Buena Park. They well might have been doing some moves
overnight (Sunday early AM is a low point for audience) and not been
finished... Sunday AM is also a low point for most talkers, so this may have
been planned.

I'll ask our CE to ask theirs tomorrow....

It has been off for two years since the big tower came down. The bandwidth
of the 0.125 wave tower and its power handling capacity forced them to run
sans HD and at 25 kw for the last two years.

The transmitter is sold state.

KFI is among the top billing stations in the market... they can buy whatever
they need.

Internationally-renown UFOlogist Stanton Friedman debates Frank and John over "Cosmic Watergate," the cover-up government knowledge of alien visitors to planet Earth.

Mr. Friedman, who has several degrees in physics and has been speaking extensively on UFOs since the late 1960's, gets into a heated debate with Frank in an interview that is very different from those heard on the run-of-the-mill "conspiracy" shows.

You can download the radio show archive at:
http://therightperspectivepodcastblog.blogspot.com/2007/09/stanton-friedman-vs-right-perspective.html#links

The Right Perspective is heard every Friday 10pm EDT over shortwave WWCR 3.215 Mhz and at www.therightperspective.com

2010. The Thrill Of SWL

Newsgroup: rec.radio.shortwave
Date: 2007-10-14 22:07:10 UTC
From: Bill <nobody@nowhere.net>
Message-ID: <jqwQi.5967$Yo3.2143@newsfe12.lga>
Source record: 128030

Look I don't want to start a trolling or a flame war but in my early days of SWL with my Star Roamer that I built from the kit, I found it really exciting to listen. The ship-to-shore on 3 or 4 MHz (mcs back then) was the NY Marine Operator and there were phone conversations to listen in on, then there was the international BC with radio Moscow giving their take on world news and of course hams all over the place.

Well now some 30 years later, I'm bored with the whole thing....yeah I try to catch a slight Gander Radio every now and then or still the international stuff that might be in English. But for the most part, the thrill is gone; unfortunately.

I hate to say it but I'll probably get rid of the Eton E5, Panasonic RF-2200 and the R-390, having lost interest in this one-time exciting hobby. (well, maybe not the R-390...)

I don't ask for comments or critiques...just wonder if there's others that share my disappointment. And certainly most everything that can be listened to can be found on the Internet (with somebody else's Internet controlled SW receiver).

Thanks...!

Hi Bill, I just finished building a Ten-Tec 1054 SWL radio, after 15 years away from the hobby. I'm very disappointed with what I'm not hearing. It seems that most Western countries have abandoned shortwave in favour of satellite and internet broadcasting. What's left is religious stations, China/Taiwan, amateur radio, and the utilities.

Yeah word to that. It will take some kind of major damage, man made or otherwise, or a government crackdown closing off the internet to get shortwave going. Look at those pour people in Burma, shortwave sales through the roof.

Had an interesting discussion with some friends Friday nite about Gore winning the Nobel prize. I'm still not sure what he won for. My friend was contending that he increased awareness of global warming - my question was - so has the hole in the ozone gotten smaller - are emissions down by any noticiable percentage.?? And I followed with " if we were going to award the ENVIRONMENTALIST OF THE YEAR to someone, I'm sure there are others out there more deserving. He wanted to know who I had in mind - and was blaming my dislike on Gore as a REPUBLICAN/DEMOCRAT issue. Trouble is: I do know someone who has done more to promote environmental health than Gore ever will be able to do. He finally told me he was bored by the discussion. But I'm still wondering why GORE got the award. Maybe someone can help me with that?:?

There are all kinds of utilities to listen to. I still hear
conversations on the marine frequencies fairly often, but that's the
tip of an extremely large iceberg. In fact, I've noticed more than
once that the people I know who're into utility monitoring never make
the complaint that there's little to listen to.

"Look I don't want to start a trolling or a flame war but in my early
days of SWL with my Star Roamer that I built from the kit, I found it
really exciting to listen."

I too built a Star Raomer back i nthe 1960's - nbavk then there was a
bunch of good stuff to listen to, but now, I understand that SWL is a
bunch of religious crap.

purchased brand new by the deceased, and never opened".

Stange but in this case true. I have personal knowledge of the
seller. The original owner bought large quantities of gear, and in
many cases never opened the boxes, including two TenTec transceivers.

I have no idea what you mean.

The AM broadcast band in just below the lowest SW band and uses the same
type of modulation the international broadcaster use. I take it you have
a problem discussing AMBCB in this news group?

What a novel concept. Preparing for changes that have been happening since the beginning with time - and, pardon the pun - "going with the flow" so to speak - or trying to stop them. Maybe you should produce a movie on that topic. But I doubt the powers that be will want to award that thinking any kind of mention - since it would do a lot to quash all the hub bud over the environment.

Still in all, I think we are responsible for our environment - as it were - we are the keepers, and we should try to pass the world on to those after us in some sort of decent shape - but I'm not sure humans can solve all the evoluntionary issues. After all, there are all sorts of things causing the breakdown to the environment including the fact that the earth is aging just like the rest of us.

> reactor site that the Israelis bombed years ago.

Well, your statement above seems to be a bit feeble minded.

I was not speaking of yellow cake from "an old reactor site that the Israelis bombed years ago" Even your conservative link says: "These issues are somewhat *separate* [emphasis added] from the Plameï¿½Wilsonï¿½Rove dust up.", which is what I WAS referring to. When people refer to Iraq and yellow cake, especially in the context of "war excuses", it is about the Niger fraud that W used as an excuse for the war, not something from "years ago". No one is saying Iraq never had any yellow cake in the country years ago. The Niger yellow cake issue/excuse was clearly proven fraudulent and a sloppy fraud at that. [as also stated in your conservative link]

And in case you've already forgotten, the topic was "excuses for the war", not something that happened "years ago". Please try and pay attention. It seems the "ignorant one" is turning out to be YOU.

> Now go figure out how the other comments you made above are on an even
> greater level of self delusion if you can.

No, I think I will stand by my quotes of the comments that *W and Cheney* made on national TV. Also the death and mutilation figures are quoted accurately, a sovereign nation WAS trashed and the "dollars spent" figures are all accurate. Finally, haven't you heard General Sanchez's statement from a day or two ago?

Sorry you think those TRUE statements are "delusional" -- but I wouldn't expect any less from a senile old fool...

2027. ON AIR: TCS Sunday Night (N.A.)

Source record: 127847

Current time: 0200 UTC
The Crystal Ship is on the air, broadcasting to North America on
3275 // 6875 kHz. Probably running about two hours from the current
time.

3275 should be best in the Midwest/Northeast.

6875 should be audible on the Gulf Coast and Western US.

Carrier power: 150 watts. AM.

No, I don't share your disappointment at all. I still enjoy this
hobby very much, but I'm probably looking for different things from it
than you are. Sure, shortwave radio has changed in the 30 years from
when I started as a kid, but its hardly dead (full of U.S. religious
stations maybe, but hardly dead).

Well thanks to everybody that responded. I guess I'll have to get more into the utility station monitoring...I used to listen to them but the Eton just doesn't cut it. I'll need to fire up the R-390 again and get a good utility station guide and start playing once more! Now that you mention it, I used to tune into the weather fax stations and decode them with the simple DOS program WEFAX...now that was exciting stuff...!

Nice catch! It is apparently a relay from Valencia, Spain for Spanish military folks.

Per reports it is a relay of Onda Cero Radio, Madrid, and is due to 'football fever' as Spain is in the running for some sort of Championship.

For more info on this, check out the DXLD Yahoo Group, or World of Radio dot com.

Won't be on forever, so enjoy!

KFI streams online, and that seems to be working fine. That's all that matters.

Also they have podcasts of everything going back 6 months, with commercials stripped out, a superior way to catch John and Ken. 4 hour show only 2 hours long.

> Telamon
> Ventura, California

A few things were (Possibly) wrong in Gores film;

The shrinking glaciers on Killamenjaro are Probably due to land use
changes;

- People cutting down rain forest, which generated moisture to feed
them, replacing it with farm land which doesn't
put out that much moisture;

But over all, I believe hes right; the planet is heating up, due to
mans activities.

- And it isn't just C02 . Deforestation is changing how the planet
stores / releases sunlight.

expect more deforestation to result in hotter, drier weather in parts
of the world that were tropical.

This will add heat to the atmosphere, slowly heating up the oceans,
which will slightly expand;
etc.

- but what's a foot or two rise in sea level, anyway? Doesn't affect
you;

right ?

Gore's recital of climate facts in his movie "An Inconvenient Truth"
contains some flaws, but most experts agree he is correct on the
biggest point: The earth is on a path toward a perilously warm climate
and the release of greenhouse gases is playing a key role.

I agree. In the 1970's it was full of political propaganda, which some
people complained about at the time. Now it's religious stuff. But
there's plenty of other stuff too. Russia, Slovakia, China, Japan,
Iran, Spain and plenty of other places are still broadcasting away.

An additional comment: I personally would not rely to much upon NPR for anything truly factual. If NPR reports it, one is best off to go fact checking.

NPR is like David Frackelton Gleason.

I see your point, but that seems a trivial difference. Especially
since HD also uses a separate signal (exciter), separate from the
analog signal. "As with AM, FM stations may use separate exciters to
modulate the very different signals." - wikipedia.

Sounds like simulcast of two signals.

Not just one.

Why does DRM have to use two separate antennas? Why can't DRM use a
combiner and output both signals through a single antenna?

An exciter is simply a source of a signal which can be modulated onto
a carrier.

If you want an analogy, HD is a little like the stereo subcarrier on
an FM signal - not the same as the baseband signal, but an integral
part of the overall signal. DRM would be like transmitting the stereo
signal on another channel entirely, with its own transmitter.

The difference is far from trivial.

Huh? I heard the Spanish within a few minutes of the O.P. and then it reverted
to an English weather report for the Caribbean and then went silent.

Any clarifications are appreciated ;)

Michael

I didn't listen too long because I had to get some sleep.

Here's a link to what the DX Listening Digest says (thanks to DxAce
for pointing this out):

http://www.w4uvh.net/dxlatest.txt

Scroll down about 2/3 of the way to the bottom.

I don't know why they'd have thrown a little English in there or a
Caribbean weather forecast (Spanish naval exercise?), but my guess is
that it was this broadcast from Spain.

2066. Improve FM reception: any boosters or better antennas to use?

Newsgroup: rec.radio.shortwave
Date: 2007-10-15 15:23:21 UTC
From: eljainc <eljainc@sbcglobal.net>
Message-ID: <1192461801.926767.85860@e34g2000pro.googlegroups.com>
Source record: 127886

Hello,

I recently purchased a Harman Kardon AVR receiver. I put it down in my basement. The FM reception is very poor, even with the included FM antenna. I tried to move it around to different positions to see how it affects reception. I noticed that if I held the antenna it seemed to work a little better. Once I let go the reception was poor again.

What FM antenna boosters are available (for a reasonably price, under say $25) will allow me to get better FM stereo reception?

Thanks

Mike McWhinney

IIRC - The Canadian Radio Stations Broadcasting in
Shortwave Bands are studying going Digital (DRM)
and the new 'European' Transmitter may be one step
in that direction.

"Some have suggested that CBC/Radio-Canada create a
http://en.wikipedia.org/wiki/CBC_Radio_One
new High Power Shortwave Digital Radio (DRM) Service
for more effective coverage of isolated areas."

On the same carrier for HD, on separate carriers for DRM. DRM is a pure
digital system, and if analog is also employed, it is on a separate
allocation, close or not so close to the digital frequency.

Because the carrier frequencies are different... and because there is no
analog component to DRM... to do analog requires a separate station,
license, frequency.

None. You need to get the antenna where it can find a signal. That is
NOT in a basement. Get a long chunk of coax and put the antenna where
it belongs on the roof.

No booster will do as well as the antenna you already have
(or some other appropriate antenna) placed somewhere
ABOVE the ground where the radio waves are. A booster
can only "boost" what is already there.

There are several different kinds of FM antennas. You could
try simply running a piece of wire from the receiver up into the
ground floor somewhere. Or you could use a "folded dipole"
which is a "T-shape" made out of 300-ohm twin-lead. Most
of us just tape or pin the folded dipole to an external wall, etc.
Or some kind of FM antenna in your attic or on the roof.

If it seems inconvienent to put the antenna above ground, then
an alternative is placing the whole receiver above ground and
running the audio into your basement.

Check with your local Radio Shack for an outside FM antenna and just
run the wire through the wall. Or, mount a simple dipole antenna in a
ground level or above room and run wire down to the basement.

M McW,

IMHO - Forget Boosters until you first have a good strong
and clean FM Signal from an Antenna.

The simplist and best way of Improving FM Radio Reception
is to place an external FM Antenna on the Roof with a Coax
Cable feed-in-line to the Basement; should give you a strong
clean FM Stereo Signal with out the need for a Booster.

IBOC was engineered from the get-go with compatible recievers in mind. The receivers would autoswitch from the analog to the digital signal.

Was DRM engineered with such autoswitching receivers in mind?

Are any such autoswitching receivers currently available?

Al Gore is one of those snotty rich kids.He was born in D.C.and he lived in one of those fancy ritzy expensive hotels in D.C.(I think I am right about that) He probally hasen't ever worked a day in his life.I once saw a photo on the internet about five or six something years ago of Al Gore when he was a kid in a hotel in D.C.I think it was somebody at www.lucianne.com who posted that photo of that spoiled rotten brat Al Gore.Even Tennesse didn't vote for that nincompoop.

Dear Bill,

The situation your are experiencing happens every eleven years, on average. It is caused by the "bottom" of the sunspot cycle in which we find ourselves just now. There is still quite a bit to hear but the best and most exotic signals are heard more in the early morning and daytime rather than the evening or nighttime, at least currently at my location. (This, of course, is not conducive to listening if one works for a living!)

Do not get discouraged. You own some good radios. I suggest that, if your boredom continues, you might pack the radios away for a year or two. If you unpack them and try them again in, say 2009 or 2010, I believe you will be amazed and pleased at what you will hear.

The bottom end of the sunspot cycle always separated the men from the boys. Hang in there.

Best,

Joe

2086. Just Installed- RF Systems MTA

Newsgroup: rec.radio.shortwave

Source record: 127906

Finally got one and put it up this morning, got the bottom of it 6' over my roof apex, and the top of it is 25' off the ground. I ran the coax downlead into an RF Systems Power Isolator as well, which is grounded to an 8' copper-clad rod. It's about 20' from some utility power cables.

Hooked it up to a Kenwood R-600 and tuned below 530 kHz first. Immediately picked up several slow code beacons between 332 and 389 kHz clearly and with a good signal strength, which is fantastic as I've never gotten anything on longwave before with any antenna here (noisy location).

It's even more impressive as the MTA is not supposed to be as good a performer as the GMDSS at these frequencies.

Then I tuned around the MW broadcast frequencies and heard strong signals from 530 kHz all the way up this afternoon. This is huge for me as I wasn't getting anything except the three locals with my portable in this house, and I had to turn the radio to get the signal, usually putting the speaker in an awkward spot to listen. This is an enormous difference for me as well.

A quick scan of the shortwave bands gave me quite a bit of good signals around the 13 and 16 meter bands. I'm looking forward to bandscanning tonight.

I had good results with my RF Systems T2FD, and now the MTA and Isolator seem to be coming through as well.

2087. $280,000,000 more to be pissed on HD Radio!

In what way is it in shambles? I had not noticed...

And the "former" advertisers did not use radio much if at all.

Those few that did, still do... as they are selling other things besides HD
in those stores.

I did tell you that HD was not going to down easily. Radio has a
huge investment, here. iBiquity has a huge investment, here. There's no
way they're not going to fight to keep this technology alive.

Don't expect it to just go away anytime soon. It may go away. It's
showing signs that HD is a solution in search of a problem. But just as
Business has always done, they'll keep searching until either they find
a problem for their ready solution, or the investors cut their losses.

Given who the investors are, don't expect any real wisdom, here.

"Clear Channel Interrupted"

"Back when Clear Channel stock was selling in the $90 range,
executives predicted it would be a $100 stock. That never happened. In
fact, the bottom eventually fell out. Under the deal approved
yesterday, Clear Channel shareholders were to get only $39.20 in cash
per share and current shareholders could get as much as 30% of the new
company."

http://insidemusicmedia.blogspot.com/2007/09/clear-channel-interrupte...

"Emmis stock is out of favor, but is future really so bleak?"

"Certainly, these are not the best of times for the Indianapolis
company, which owns 25 U.S. radio stations, as well as 16 TV stations,
Indianapolis Monthly and other magazines. Its stock was trading last
week at $19, virtually unchanged for the year but far below its
December 1999 high of $62."

http://goliath.ecnext.com/coms2/gi_0199-4118113/Emmis-stock-is-out-of...

"Univision gains don't help stock - Univision Communications Inc"

"Even with that momentum, Univision stock, which closed at $28.40 on May 20, is down 30 percent from $40.45 a year ago and had dropped more than 10 percent since the beginning of the month."

http://findarticles.com/p/articles/mi_m5072/is_21_25/ai_102725300

As I said, your industry is in shambles.

Plus they got several dollars a share for the spin off of Live Nation.

And a 1999 stock high is meaningless. Yahoo was way over $100, and is today
around $25.

> "Even with that momentum, Univision stock, which closed at $28.40 on

> than 10 percent since the beginning of the month."

It went private in March at nearly $40 a share. You are repeatining a quote
from a prior year. In May of 2007, there was no Univision stock being
traded.

IBOC Crock,

Highly unlikely since the IBOC's Digital1% ERP Limit keeps
both AM and FM Radio Broadcasters well within their
'authorized' Local Area "Service" Boundaries.

Oh come on, hang in there. In this particular re-incarnation in the hobby I've been at it for 25 years, and though it may be slow at times there is always something or somebody to listen to.

And, in the past few weeks a brand new country has come on the air. It doesn't get much better than that!

Those proposals are applicable to the publically-owned CBC/SRC only...
nothing to do with a low-powered SW relay of a major city newstalk
station, albeit one owned by one of Canada's major private
broadcasters, Standard Radio.

Higher the frequency, lower the wavelength: shortwave... nuffink to do
with "type of modulation".

I take it you have
>a problem discussing AMBCB in this news group?

Ah, um, gee... it certainly is outside the parameters of a "shortwave"
group.

Dat's the name: <rec.radio.SHORTWAVE>.

But then, to be fair, a huge proportion of the pap that gets posted to
the group doesn't have any connection to radio, so mebbe we should
sing praises of whatever.

I sort of get the idea that 640 is "mediumwave".

That woud be 'shorter the wavelength', not lower the wavelength.

You'll get the hang of it.

Dear All Friends Worldwide,

Greetings from Lombok Island Indonesia,
Thank you very much for your time to read this short article.
God bless you all...

CAMPING AROUND ORANGUTANS VIA LOMBOK ISLAND ADVENTURE

Regret, we mean not to harm the Orangutans or our self and we still keep on distance from them, but, Imagine you do camping in the deep of jungle where vary of colorful tropical plantations covered you added with various of tropical fauna welcome you with their funny ways, and the ultimate of Orangutans surround you with all of their attractions shown to you in great greenery scents of deep jungle with their pristine air that will lust us to keep striving on getting nature life that contain more happiness than pretending. Here, you will get your deep special feeling; might be as God mind in the middle of his creation and you will get your unforgettable of experiences ever. Being on this area, you will know more about your self and promise you finding better way of life for future.

Moreover, before arrive in Orangutans area you will tread by great ultimate heritage of Lombok Island nature and unique culture that will add your great time of adventure vacation of your dream. You will glad what you did.

Our local staff will full guide you in 24 hours for your addition of getting fun, safe, find great exception and unforgettable experiences of your traveling, adventure or vacation dreams. Our expert tour guide will also show you the other item that you never seen before as one of your ultimate wealth in your life that could be as your best capital for you and your next generations regarding what is better life's way.

Summer time is your best time to see these all exception with no hard adventure will be found if you want to experience more adventure challenges, in Rain season is your best choice. These adventures could leave weekly from Lombok Island.

Once you did, you will be glad to do it again next time, especially if you do together with your families and relations

Detail recommended itinerary is as follow:

Lombok- Yogyakarta (Borobudur Temple) - Camping Around Orangutans Safari Adventure - Jakarta
10 Days / 9 Nights

Day 01: Arrival Lombok - Hotel (Senggigi Resort Area)
Arrival at Selaparang Airport of Mataram Lombok, meeting service and transferred to your hotel at Senggigi resort area (Hotel recommended: Senggigi Beach Hotel****) or similar.
Welcome dinner with us at local restaurant for Lombok Culinary. Take a rest at your hotel.

Day 02 : Gili Trawangan Tour (B.L.D)
Morning breakfast at your hotel, get on board and leave for Gili Trawangan tour by our private motorized wooden boat to Gili Trawangan one of your Lombok Island best sites to visit, where here you will enjoy the marine wild snorkeling to explore the amazing under water life's with its colorful of corals reef and covered by over than 200 kind of fishes. Morning breakfast at Home Stay Seikonyer, check out and transferred to Kumai and Pangkalan Bun airport for your fly home via Jakarta.

End of Program.

Prices: On Request

How to get the Island?

1. For direct international flight, we recommend to use SILK AIR via Singapore or Merpati Airline via Kuala Lumpur.
2. For domestic flight you can reach Lombok island via Jakarta, Yogyakarta, Surabaya, Denpasar Bali.

If you hard to reach the air ticket to Lombok, please contact us for help.

INCLUDING:

· Local Guide
· River transportation called wooden boat KELOTOK 12M length - 4M width
· Speed boat
· 2 nights accommodation on boat
· 2 Nights Senggigi Hotel
· 2 Nights Hati Suci Lodge
· 1 Nights Yogyakarta Hotel
· 1 night in the tent park jungle
· 1 night in home stay at the village around the park
· Police permit copy of the first page of passport and visa are required
· Entrance fee/park permit
· Fallboards meals during the trip Breakfast 4x, Lunch 4x, Dinner 4x)
· Fruit
· Mineral water aqua
· Soft drink
· Camps Cooking
· Snack
· Borneo Ancient Spa " Batimung "
· Tea/coffee
· Local porter who really knows about the trees and some herb for anti-malaria
· Donation for The NGO (Forest Restoration)
· Tipping for the conservation workers (who re-plant the trees etc)

EXCLUDING:

· Airfare
· Local Insurance
· Laundry
· Health services
· Alcoholic Beverage
· Other personal expenses

For further information, please kindly contact us for more detail.

Many thanks for your kind attention and support.
Looking forward to do a camping together with you in near future
God bless you all

Have a great day...
My Best Regards,

L. Herwia A

2113. OT: Acoustic help

Newsgroup: rec.radio.shortwave
Date: 2007-10-16 01:34:35 UTC
From: "bajohnson29@yahoo.com" <bajohnson29@yahoo.com>
Message-ID: <1192498475.803187.70230@y27g2000pre.googlegroups.com>
Source record: 127933

About a year ago - I posted some questions on improving the acoustics at my job site. Some very nice people offered several suggestions - As I was waiting on budgeting - I was unable at that time to follow up with as many of those as I would have liked to. I now have some monies, but I need to somehow document quantifiably just how poor the acoustics actually are before spending dollars on improvement. I know there are some meters that can be used to measure output of ventilation systems and other noise causers - but I was wondering if anyone could recommend a company that might be able to do an overall assessment of the area?? Do companies do such a thing?? Does anyone know how much that would run??

Thanks. I need to get this taken care of as soon as possible.

You can reply to my direct e-mail if you would : bajohnson29@yahoo.com

Wow! One of the boys here is paying attention.

I went fishing, an' I got A Bite.

dxAce, I'm surprised you took the worm.

My point is: 640 kHz is "mediumwave".

This is <rec.radio.shortwave>.

Open wide, and Y-A-W-N.

Is there a known broadcaster on 4395 in English (a quick Google search came up with only clandestine sources not in English)? I was using a roughly 4 kHz filter on USB and my receiver has 1Hz resolution, and a synthesized 1st L.O. so a 500 kHz error would be huge ;) The signal strength did not change between the Spanish language and English language segments and I didn't retune.

Let's hope the sun gets off it's lazy ball of plasma and makes some spots :)

Just installed a mobile SW setup; enjoying Radio Australia, Radio New Zealand Int'l, Radio Moscow, and Radio Netherlands while driving to and from work late/early.

Let's just hope we're not looking at another "Maunder Minimum" kind of situation, where the sun just quiets down for several cycles. This one has sure been painfully slow and no evidence of a turn-around yet.

You are entitled to believe whatever you wish. Isn't that cool? :)

But, I stand by the scientific consensus that there's a problem and
have trouble characterizing a pretty solid block of scientists as
"kooks" for saying there's a problem.

First, even *if* humans aren't causing the warming trend, the fact is
the Earth now has about 6.6 billion people on it means that even
fairly small disruptions in climate may result in massive starvation,
refugee crises, and destabilizing effects anywhere where the carrying
capacity of the land is marginal vs. population load. (And this isn't
just poor countries. Australia may well be one of the most seriously
affected.)

We may have it backwards. The issue may not be whether or not humans *are* changing the climate, but rather whether humans *should* be changing the climate. And if the current warming trends continue, perhaps the answer is "yes".

Two proposed methods for counteracting a warming trend that seems to be created by greenhouse gas concentration are being discussed. (Probably others, but this is what I've read about):
1. Carbon sequestration. This is basically, sucking CO2 out of the atmosphere (or capturing it where it's generated, at say a power plant) and converting it into a solid form or pump it underground.

2. Reflectivity. One way to cope with increased solar energy being trapped in the atmosphere is to reflect a percent or two of the sunlight back into space. Reflective particles in space, or even over large uninhabited areas, or the upper atmosphere. This could have really neat DX potential. :)

These can be thought of as attempts to keep the climate where it is now, even if CO2 emissions continue to increase.

There's *way* too much gloom-and-doom about global warming. But not because it's not a problem. It's because we'll work out a solution. Some will be conservation (which often saves money and doesn't impact quality of life at all.) Some will be alternative energy sources. But in the near-term, probably the bulk of it will be a tech-fix.

Artificial ionosphere with shiny particles, anyone? :)

> cuhulin

The thing is, the global cooling part was never generally accepted and
was speculative.

Human causation of the majority of recent global warming isn't very
controversial among climate scientists. They specifically looked for
natural causation and concluded that it was "very likely" (over 90%
chance) that human activity caused the majority of the observed
temperature increase.

The way science works is, it converges on the truth as facts
accumulate. There's that 10% chance that some as-yet unknown natural
phenomenon is responsible, and despite how we understand CO2's role in
trapping heat, maybe we have it wrong.

I wouldn't want to risk waiting until we're 100% certain of a threat
before acting though. :)

If we didn't have 6.6 billion people on the planet -- which is
arguably too many and very much a modern phenomenon -- people would
just move as some areas formerly habitable fall to drought, and others

that were formerly a bit too cold are now habitable.

We're now in a state where mass migrations of people can't occur -- at least not across national boundaries, and certainly not without war or general violent conflict.

So this is a new problem, even if humans have weathered (no pun intended) ice ages and warm periods before.

As to human role, I believe the science on it. Regardless of whether humans are causing it, however, some thought should be given to how to mitigate the effects, if not actually how to engineer a solution to prevent it from happening.

Is the current climate "perfect"? No. But.... a warmer climate means more energy in the atmosphere, which means more violent and variable weather. That, generally, isn't a good thing.

The highest point in this State is a Hill by the name of Woodall
Mountain 806 feet.
But, a Hill is not a Mountain.In Wales, they measured a Hill the local
folks over there were calling it a Mountain.So they started toteing some
dirt up the side of that Hill and got it high enough to be officially
called a Mountain.It is a True Story.
The Man Who Went Up A Hill, But Came Down A Mountain.

Perhaps not a broadcaster, but rather a utility station with WX info? Please, put your thinking cap on.

> I was using a roughly 4 kHz
> filter on USB and my receiver has 1Hz resolution, and a synthesized 1st L.O.

I never mentioned anything about 500 kHz. The difference between 4394.5 and 4395 is 500 Hz.

> The signal strength did not change
> between the Spanish language and English language segments and I didn't
> retune.

You probably didn't have to retune as you were using a 4 kHz filter!

No matter, it would be best if you'd actually read the info that you were given.

What I am trying to do.

As many of you know I have retired and live out of California a lot of the time.

I am setting up scanner groups on my Grundig Satellit 800 to monitor coast guard frequencies in the far Western Pacific and China Sea. I live on Luzon, The Philippines now.

Tonight (my time) I got started. Anytime I am in the office I will let it run. I will watch for other things monitor and just see what happens.

Nah, you're not supposed to read my mind. You ARE supposed to read the CONTEXT. The topic was : "Excuses for the war". In THAT context, everyone (except possibly you), realizes the yellow cake reference is recent, as in "context", as in "used as a 'reason' for the war", not something that happened 20(?) years ago.

No mind reading necessary. Just pay attention to context.

BTW, nice "doge" on your part (although I believe you meant "dodge"). I only mention this because you are the one always accusing others of being ignorant...

>>> Now go figure out how the other comments you made above are on an even
>>> greater level of self delusion if you can.

> Do continue to live in your fantasy world.

Quoting the president and vice-president and stating TRUE statistics about the human and dollar cost of the war is "ignorant" and being in a "fantasy world"?

If you don't believe this "war" has been a fiasco from beginning to present and started on the flimsiest of (and continually changing) excuses, I respectfully submit that -you- are the one living in a fantasy world and suggest you re-read (or read for the first time) General Sanchez' comments and General Powell's de facto apology to the world. Or, try and refute the facts I have stated (and no, quoting

something 20 years old and out of context does not count). Please try
something other than bluster.

Hey RHF;

Theres a magazine called " The New Yorker"; - kind of a funny & often literate rag. Published J.D. Salinger,
James Thurber, Charles Adams Cartoons, (When they were all alive) Etc.

In any case, they had an article on Global Warming.

Heres a link to the interview of the author. 2 pages long, not t tough read.

http://www.newyorker.com/archive/2005/04/25/050425on_onlineonly01

Small quote below.

" Q: I was very struck by your description of the work being done by Donald Perovich, a government scientist, who measures something called albedo. What is its significance?"

A:

" Albedo is a measure of reflectivity. The ice in the Arctic, and also in the Antarctic, reflects a tremendous amount of sunlight back into space. This is a very significant factor in shaping the earth's climate. In the Arctic, the ice, and particularly the sea ice, is melting, and this is changing the earth's reflectivity. More heat is being absorbed, which is causing more sea ice to melt, and so on. This is a good example of positive feedback. It's taking a relatively small change to the system and amplifying it into a much larger one. There are several positive feedbacks in the climate system that are known, and quite possibly others that haven't yet been identified, and all are cause for concern.

"

Best,

Barnegatedx

Git the Sangean DT120; works like a charm..

Had the DT110 for years until it just wore out; great little pocket
radio

Thinking about getting a portable scanner to monitor the goings - on
out in NY Harbor;

At times, Many helicopters circling around with Coast Guard Boats in
the water;

- never a word on the news about whats up.

*& Good luck on learning Chinese !

I have a mini 300PE Grundig (from Radio Shack) shortwave radio.
It is great for a tiny radio that can pick up FM/AM/Shortwave
channels.
Does anyone have any recommendations for a unit that has better
reception, but
is real easy to use (I don't need a lot of bells and whistles)? It
could be a lot larger, but prefer something that can be easily
packed in a carry-on when traveling. How much would I have to spend
to get
something much better? I saw offerings by Grundig, Sony etc.. up to
about $250,
but was wondering what is the "next step up" in Ham Radio. In other
words, what

The "HD" AM-BC crowd just don't get it..
AM radio is doing better than they think it is. I listen to AM more
than I do FM. Lots more...
I like listening to the talking heads, call in shows, etc on AM radio.
If I want music, I plop in a CD... I don't listen to much music on
the FM band, because they usually don't play what I want to hear.
I'd rather choose myself via a CD disk, and I bet many others are
the same way. Either that, or they use sat radio..
Very few people could care less about the audio quality of the
AM band. It's quite good enough for the usual purposes.
Another thing... I drive on the interstates a lot.. And I usually
listen to AM, because of the increased range. I can take my
usual 450 mile trip to Studio O, and listen to two stations the
whole trip. Both are 50k clear channels. Attempts to spice
up the audio quality will be pretty much a waste of time.
Being most of the programming is speech, who cares about
a roll off of high frequencies that aren't needed anyway...
A lot of truckers still listen to AM. A lot of WBAP's commercials
are still aimed at truckers as an example.
Most truckers couldn't care a whit if the talking head in
question was high fidelity, when that higher fidelity is overkill for
the talking head programming.
They would prefer the signal they have stays stable for a
couple of hours or more.. IE: clear channels..
I view HD-AM in a similar light as BPL... If they can't use the
technique without trashing other license holders of the
said spectrum, they should cease and desist such behavior.
It does bother me that some car companies are already
pushing these "HD" radios. It's like subsidizing the mess
in a way.
It's all about making the $$$ these days, not what people
want or need. Or should I say "hopes" of making big $$$...
I'm starting to think the head honchos at the FCC are all
surely going brain dead. They sure bend over easy for anyone
with delusions of high tech grandeur and big $$$ to be
made.

2154. VR-5000 radio control software

I was disappointed with the way the Yaesu VR-5000 receiver was
designed, and the lack of software on the Internet available to
control this receiver. So, I took matters into my own hands and
designed my own control program that can access nearly every cat
control feature of this radio. Scanning Logging and record is greatly
simplified and now I have a receiver that I can enjoy on HF as well as
the VHF/UHF bands.

Visit my web site:

http://ke7ate.tripod.com

to see a brochure for my

'VR-5000 Signal Capture and Analysis' software.

Dear "FedUp,"

There is another small shortwave radio that is often overlooked when listeners are making recommendations to others such as yourself. This is the Sony ICF-SW35. It is a dual-conversion MW/SW/FM radio. PASSPORT TO WORLD BAND RADIO has never been enamored of this set primarily due to the fact that it has no keypad. But, with fifty memories, and build-quality "like a tank" (even though it is made in China), this radio will perform very well indeed. There are "work-arounds" to minimize the impact of the lack of a keypad and the radio is quite sensitive off its whip. (Its MW performance is also very good and its FM performance is at least what you'd expect, maybe better.) Its image rejection happens to be first-class. There is no SSB. The set is extremely easy to use, yet quite sophisticated. Best of all, its price is "right" - if you search around a bit on the web, you will probably find it for less than $80.00, sometimes a good deal less. I think this is quite a bargain for a radio of this quality and longevity.

I own two of them. They are both over five years old. I keep them in the glove compartments[!] of our cars - winter and summer (with the batteries out, of course). When I put the batteries in, the radios always "fire up" perfectly and the only thing one must reset is the clock. All the memories are retained even without batteries being installed. Neither has ever even "hiccuped."

I hope you'll consider this one. I think you would be pleased.

Best,

Joe

A half-wave dipole for a shortwave station at 640 khz would be, um,
about 731 feet long.

Guess it depends on how short short has to be to be short.

> Was DRM engineered with such autoswitching receivers in mind?

Obviously a DRM receiver can handle both analogue and
digital signals.
Once a DRM signal is received, all parallel frequencies of
the service are automatically stored in the receiver's memory.
If the signal becomes weak the receiver will automatically switch
to a better signal (if available), even in other bands.
With a small amount of digital information added to an existing
analogue AM broadcast (AMSS, AM Signalling System) the
receiver recognizes the alternative frequency information and
schedules for other DRM, DAB, AM and FM transmissions
carrying the same or related programme material.
When you tune in to an analoque AM transmission on 630 kHz
in the medium wave band the receiver could let you listening to
for instance a DRM broadcast on 9740 kHz on short wave.

Hello,

I'm new to this and have tons of questions. I've read a few FAQ's but need some specific help. I live in Massachusetts, west of Boston on a pond.
1. In general, will living on a pond have any negative effects on my reception? I've been told from the wireless phone company that the reflections of waves off the water causes some of my cell phone signal issues.
2. I'd like to listen to eastern Europe stations - after I get something set up is it reasonable for me to assume I will be able to get these stations? And if so, can I get them consistently - every day/ night?
3. I have a Grundig Yachtboy 400. Is this enough of a radio?
4. I see lots of big old rigs - do I need one of these? They do look like a lot of fun!
5. My Yacht boy has only a small jack for an external antenna (no BNC) - so how do I rig up a good antenna?
6. What would be a good antenna? I'd prefer some inside the house rig - even if it's more money. I was looking at Grove's AOR LA380 ANT44DS loop antenna. Is this a good antenna / solution?

Thanks for any help you can provide.
Paul

> issues.

Your pond should not affect short wave reception at all. Short wave is nominally 3 to 30 megaHz (MHz) while cell phones are 800 MHz and up, depending on your provider and the system in use in your area; BTW, it sounds like the cellphone folks might be blowing a little smoke... :-)

> 2. I'd like to listen to eastern Europe stations - after I get
> something set up is it reasonable for me to assume I will be able to
> get these stations?

Yes

>And if so, can I get them consistently - every day/
> night?

No, not reasonable to assume. It won't necessarily be "consistently - every day/night" due to short wave propagation -- sun spots, coronal mass ejections (CMEs) and other radio propagation variables. This won't be consistent like your normal, local AM/FM outlets. However (and generally speaking), you should be good to go most of the time.

> 3. I have a Grundig Yachtboy 400. Is this enough of a radio?

Yes

> 4. I see lots of big old rigs - do I need one of these? They do look
> like a lot of fun!

No and yes. No, you don't -need- one and yes, they are a lot of fun!

> 5. My Yacht boy has only a small jack for an external antenna (no BNC)
> - so how do I rig up a good antenna?

See answer below.

> 6. What would be a good antenna? I'd prefer some inside the house rig
> - even if it's more money. I was looking at Grove's AOR LA380 ANT44DS
> loop antenna. Is this a good antenna / solution?

You will get a wide and varied response to this question --sort of like asking what's more fun, blonds, brunettes or redheads. Generally speaking, my opinion is a 10 or 20 foot random length simple wire antenna outside is better than an indoor antenna -- but again, I am sure you will receive many and varied opinions!

It's hard to go wrong with Kenwood (I have a V7A that's outlasted two
cars :) , and the F6A has 220 Mhz too. And if memory serves, it's a
smaller radio than the FT-60.

One warning about the FT-60. The speaker-mic plug is located on the
right-hand side of the radio (rather than the more usual top). What
can happen when wearing it with a speaker-mic is occasionally the
pulling motion will pull the plug out a tad and cause the radio to

start transmitting.

My understanding is that people who use speakermics with this rig take a rubber band along and strap it around the radio to prevent this when using the speaker mic.

Having never used a speaker mic with this radio, it's not an issue for me.

That's interesting, and I can imagine that approach working well. There would be no need for the adjacent channel digital interference which is designed into IBOC.

So it looks like DRM can be better than IBOC.

Seems as though Paul Krugman is mentally ill just like Al Gore.

The New York Times is a Liberal rag, and these days about the only thing it is good for is wrapping the
garbage (and reporting it as well).

2174. WABC IBOC in Oho

Newsgroup: rec.radio.shortwave
Date: 2007-10-17 10:48:19 UTC
From: Ron Hardin <rhhardin@mindspring.com>
Message-ID: <4715E873.3218@mindspring.com>
Source record: 128194

I'm testing out WABC 770 reception in Ohio --
There's IBOC hash continuously from WBBM 780 Chicago,
and soon will be from WJR 760 Detroit.

Some country station is fading up and down over WABC, as it goes
down and up between 6AM and 7AM

But wait! At 6:30 WABC comes in in HD! The noise is gone.
I think that's the only time that IBOC has worked in my favor
at such a great distance (500 miles).

I wonder how long it will last. Probably not long. It's
been working for ten minutes now, though.

(Sangean HDT-1 HD tuner, sharing an antenna with a R8B ;
using two elements of a phased array to null away WBBM)

As I recall, WABC is completely gone by 7:30 AM.

Two ALA1530's phased to listen east.

WABC is still there at 8am, but has had intervals when it's under
the hash and other stations. IBOC reception ended after about about
20 minutes.

That's a pretty decent record - don't think I've ever had an out-of-town
IBOC station lock in for more than 90 seconds at a time.

What is it about Mr. Gore that drives right-wingers insane?

Partly it's a reaction to what happened in 2000, when the American
people chose Mr. Gore but his opponent somehow ended up in the White
House. Both the personality cult the right tried to build around
President Bush and the often hysterical denigration of Mr. Gore were,
I believe, largely motivated by the desire to expunge the stain of
illegitimacy from the Bush administration.

And now that Mr. Bush has proved himself utterly the wrong man for the
job -

to be, in fact, the best president Al Qaeda's recruiters could have
hoped for -

the symptoms of Gore derangement syndrome have grown even more
extreme. ""

Bush "Triumphant in Iraq";

- and Oil is over eighty dollars a barrel . .

Average consumers won't bother - just as with cell phones and analog
radios, consumers want plug-and-play.

Dear Entfred:

You wrote -

> Thanks for the recommendation, Joe. I have a few questions:
>
> What is a keypad?

A keypad is a group of numbers on the radio similar to the keypad on your telephone. This is used to directly enter the frequency desired if you know the frequency to which you wish to listen. Your Grundig Mini 300PE, being an analog-tuned radio, does not have one but MOST digitally-tuned shortwave radios DO have one. The Sony ICF-SW35 is an exception and there are several other shortwave radios (some quite expensive) that do not have a keypad. Frankly, it is better to have one but it is not an insurmountable problem to do without. In my opinion, this is really the only "negative" regarding this Sony radio but, at its price and considering its performance and quality, it is completely acceptable, at least to me.

> What is the advantage having a SSB?

Single Sideband (SSB) is a form of transmission by which one of the radio wave's sideband and its carrier wave is "stripped off" the signal. This leaves only one sideband that is actually transmitted. An SSB-equipped radio then "reconstitutes" the signal so that the listener can hear it. This has a great advantage in that far less power is required to achieve equivalent distance to a standard AM signal. It has a MAJOR disadvantage in that it is fairly difficult to tune. This is why this transmission method had only "caught on" with amateur (Ham) radio operators. There are very few SSB broadcast signals (the armed forces radio-television service being the notable exception). I do not know if your current radio can tune any of the amateur bands; if it can, you will hear signals that sound highly distorted (they have been compared to "Donald Duck") and which cannot be understood at all. If your radio were to be equipped with SSB, you would be able to switch it in and listen to the signals.

It is a complication in operation and most people do not need or even want it. If you later decided that you wanted to listen to Ham transmissions, you would need a more complicated (and expensive) radio. The Degen radios that have been mentioned here DO feature SSB reception as do some other radios in the price range in which you are interested but in ALL cases these radios just do not have the build quality (or apparent longevity) of the Sony model. (Others reading this will disagree with me but the Degen radios, such as the '1103,

have not been on the market long enough to know just how long they will give problem-free service. The Sony shortwave radios have excellent track records.)

I hope the above has been helpful to you. Please do not hesitate to ask any further questions you may have.

Best,

Joe

Sure, the price per barrel of crude oil is up.Inflation and many other things account for that.How much was the price per barrel of crude oil in 1941? (the year I was born) A couple of dollars would fill up a car's gas tank.And look at wages, and the prices of cars and homes and food etc.Check out, www.jacksongasprices.com
Adjusted for inflation, we are paying about the same per gallon of gasoline as people paid in 1941.

Stephen,

The PR-D5 has 2.5 inch dual stereo speakers, which are not as rich as
the Sonido's single monoaural 3-inch speaker. The Sonido typically is
10 dollars more essentially because it uses the same high-grade
speaker as its big cousin the Sangean WR-2, which I own. I also own
the PR-D5, which has adequate speakers but not as full as the WR-2's
or the Sonido's. Reception is strong on both the PR-D5 and the Sonido
with their telescopic antenna. Do you need TV band on Sonido? Do you
prefer the bigger monoaural speaker? You can't lose with either radio.
Bests,

Jeff McMahon "herculodge"

Jeff,

Thanks for pointing out the difference in the speakers - I hadn't picked up on that from the pictures I've seen. I would prefer the improved tonal balance rather than stereo. And, yes, the tv band is something I'm looking for (my plan b was that if I used the PR-D5, I could patch in a different radio that gets the tv band and use the Sangean as an amplified speaker - but simpler is better).
Actually, I wound up ordering the Sonido, and it arrived just yesterday! So I'm still checking it out... One initial impression is that Sangean's remarkable DT-200V pocket size radio seems to be just a bit more sensitive on the TV band (which can make an audible difference since we're in a rural area). Overall, though, the Sonido does appear to be a well make radio, and I'm looking forward to comparing it with some of my other favorites (Grundig S350, Degen 1103, ...) :-) .
Thanks for your comments,
Stephen

Identifies as: "WHRI", in SC, USA, on 9515 kHz
now in English at 17:00 CDT

This station has a comprehensive website: http://www.whri.com
with a search engine that includes fields for language, transmitter
freq, location, etc. I tried a search for 'Arabic' on 'Wednesday',
all other fields "all" and got zilch, however I didn't get anything
for less restrictive searches either so I suspect the site isn't
working quite right (note these are selection boxes rather than
freeform entry fields).

Regards,

Michael

I have recently acquired a radio controlled SW receiver (Icom PCR100), and had my DX394 modified by "lowbander", and now feel I have the best possible receivers (my) money can buy.

As a result, I am divesting myself of some of my SW collection:

- 2 Sangean ATS803A's, both will have their original carrying strap & manual, original unbent antennae as well: $50.00 each plus shipping. (I don't really know what shipping costs
will be, but my DX394 cost me ~$20 because I had The UPS Store do the packing as well (double boxed; the receiver was wrapped in bubble wrap, surrounded by packing peanuts in the box it was in AND that box was put in a larger one also surrounded by packing peanuts)).
- 2 Radio Shack Amplified Shortwave Anntenna's; original unbent antennas, original pigtail cable: $10.00 each plus shipping
- 1 modifed MFJ-956 preselector: $15.00 each plus shipping
- 1 MFJ-1040B preselector: $25.00 plus shipping
- 1 Radio Shack Amplified Communication Speaker catalogue # 21-541A: $5.00 plus shipping
- 1 Grundig eTraveller VII portable receiver with leather carrying case, desktop stand & "wall wart": $10.00 plus shipping
- 1 Grundig Mini World 100PE portable receiver with beltclip: $10.00 plus shipping
- 1 Kcibo model KX-939B portable receiver with leather carrying case: $5.00 plus shipping
- 1 Kchibo model KK-216 portable receiver: $5.00 plus shipping

Paul / PMF,

Shortwave Radio Listening (SWL) -First Think- Outside Antenna !

1 - Consider using a good 'earthen' Ground with your Radio
and any Shortwave Antenna you might use with it.

2 - Use the Radio's External Antenna Jack {Input} for your
Wire Antenna -vice- a direct connection to the Whip Antenna.

3 - Experiment with a 'shorter' Wire Antenna Element
- - - Often 35 Feet to 60 Feet of outside Wire Antenna
will work well with a 'portable' AM/FM Shortwave Radio :
While a longer piece of Wire simply causes RF Signal
Overload and more Static Noise to be heard on the Radio.

4 - Read these Messages :

* Tune-A-Stick -and- Portable Wire Antenna (PWA) for Whip
Antenna Couplers to External Shortwave Listener (SWL) Antennas

http://groups.google.com/group/rec.radio.shortwave/msg/09c73c4c94625fc7

* Overload Reducing Shortwave Listening (SWL) Antenna
for 'portable' AM/FM Shortwave Radios
http://groups.google.com/group/rec.radio.shortwave/msg/0aba8354278d095d

* Low Cost {Basic} Portable Shortwave Listening (SWL)
Antenna Ideas
http://groups.google.com/group/rec.radio.shortwave/msg/e9a3384f07142a77

=IF= You are limited to an Indoor [Hidden] Antenna
-Vice- the AOR LA-380 Wideband Active Loop Antenna
http://www.grove-ent.com/LA380.html
Consider the LF Engineering H-800 Skymatch Active
Antenna which can be mounted a few feet above the
Roof on a Vent Pipe and is very 'Stealthy'
http://www.grove-ent.com/ANT15.html
-or- Hang It from a Lower Tree Limb about 12~ 24 Feet
Up in the Air; that is about 12~24 Feet away from the
House.

hope this helps - iane ~ RHF
.

Last Name needed: RADIO FRANCE INT: 10 Minute Simplified French Broadcast: Valerie Rarorear?
-- even in podcast form the name is garbled
-- in Africa, the target region for the broadcast ... I can only wonder at the name confusion (2nd hop)
-- even a 500 kw Analog SW transmitter (With OPTIMOD-AM in OPTIMOD-HF mode) probably is of no real help ... groundwave reception

URLs:
http://www.rfi.fr/lffr/statiques/accueil_apprendre.asp
http://www.rfi.fr/radiofr/podcast/journalFrancaisFacile.asp (subscribe to podcast)

I can't find her on the Journalists list on the website, not under V -- no one is under V.

Somehow I get a creepy suspicion that she looks like the American Imperialist celeb: Geanne Garth ("what i like about you" ,,, VAL Tyler)
-- similar looking and shaped people can have voiceprints that correlate highly (80%-ile, but never 100%-ile)

So what.....??????????? Why is that piece of either man's family tree newsworthy?

My wife has a family genealogy database containing links between about 32,000 people. In it she has shown that my mother and father are related by marriage back about 8 generations ago and it shows that I have ties to two presidents.

Clearly if you look hard into any family tree you will find a lot of interesting and unusual connections. For instance when the USA was much more rural it was not uncommon for very close relatives to marry.

Joe and everybody,

Thanks so much for explaining the options I have and some of
the fundamentals. I have some more
questions and comments:

What do you think about Grundig 550?

The Sony unit that lots of people like appears to have a smallish
speaker. I just read about a KA2100 model that looks interesting.

Kaito PLL Synthesized Dual Conversion AM/FM Shortwave Radio, KA2100
at http://www.amazon.com/Kaito-Synthesized-Conversion-Shortwave-KA2100/dp/B000HOJN3O

The KA2100 appears to have SSB.

As far as any unit I buy,
the keypad sounds very convenient, but can live without, as I have
always lived without one.

No immediate plans to get into Ham Radio. I can't remember if you
have to do morse code or not, still. I know somebody who did Ham
when they were a kid and learned code and was eventually able
to get a very good rig and talk to people around the world.

What would really be cool is to find a reasonably priced desk top
SW receiver that was built into a stereo receiver. I have an ancient
receiver that is almost dead (Sansui 771) and it would be cool to buy
a new stereo receiver with shortwave reception, but have not seen
anything like that :-)

Grundig radios nowadays are made in China, I think.The quality just isn't there (in my opinion) anymore.I own a 1957 (according to a date in one of the owners/operator booklets laying on the Phonograph of the radio) made in Germany AM/FM/Shortwave/Phonograph wooden cabinet floor model radio, which I believe was made by Telefunken.I also own a 1950s (I can't find a date in the owners manual, actually, the owners manual is a folded paper in a paper envelope/pocket that is on the inside of the rear panel of the radio) or it might be a 1960s, Telefunken Opus 7 AM/FM/Shortwave wooden cabinet table model radio.

> night?

In general, yes. Your best bet would to listen between 5 pm and 11pm
ET on frequencies of 5.8 - 6.2 MHz, 7.2 - 7.5 MHz, and 9.3 - 10.0 MHz.
The lower bands will be better later in the evening.

Get a guide such as "Passport to Worldband Radio," or use an online
search such as:

http://hfradio.org/english/

> 3. I have a Grundig Yachtboy 400. Is this enough of a radio?

Fine.

> 5. My Yacht boy has only a small jack for an external antenna (no BNC)
> - so how do I rig up a good antenna?

Get the correct mating connector at Radio Shack.

> 6. What would be a good antenna? I'd prefer some inside the house rig
> - even if it's more money. I was looking at Grove's AOR LA380 ANT44DS
> loop antenna. Is this a good antenna / solution?

A random wire should do fine. Try to route it away from TV's,
computers, etc. to minimize noise pickup. It's best to run it outdoors
and in the clear.

Thanks. Indeed the schedule as described in:
http://www.rcinet.ca/rci/PDF/A07_SW.pdf (Radio Canada International)
confirms both the Arabic heard at 1940 utc and the Mandarin heard at 2110 utc
on 9515 kHz.

The Grundig 550 was Grundig's answer to Sony's ICF SW55/77. The ease of use, and ergonomics are a horror story on the 550. I had mine for about 6 months and very happily sold it to some other sucker.

The 550 also eats batteries for breakfast. The KA2100 does NOT support SSB, there is no product detector or BFO.

For the money ICF-7600GR is hard to beat.

2241. Centrios AM,FM,SW,TV,WX radio

Newsgroup: rec.radio.shortwave
Date: 2007-10-18 21:59:24 UTC
From: "ve3..." <ve3iut@hotmail.com>
Message-ID: <1192744764.803398.205920@t8g2000prg.googlegroups.com>
Source record: 128161

SUMMARY. The Centrios portable radio covers AM, FM stereo, SW 3.2 to 26.1, TV 2-13, and the WX band. It is sensitive and stable on all bands and has strong clear audio from two speakers. It has digital readout and 45 memories. It has a built-in power supply plus four D cells. It has a bandwidth of about 10 khz which makes for pleasant listening on the SW and AM bands. It cost $89.95 at The Source in Canada and is also distributed in the
USA.
DETAILS. I first noticed the Centrios about two years ago but it looked like a frog covered with Asiatic bling and I recoiled in horror. This newer model is nicely styled in aluminum and black and has sturdy parts from the fold-up handle to the buttons and switches. It is about 12"x7"x3" (slightly larger than the S-350). It is the first radio I have seen that does a good job on such a range of frequencies and modes. It is not quite as good as the Superradio II on AM but close. On SW it is quite sensitive and remarkably sensitive on the FM and TV bands. Conditions were poor on SW but I had no trouble separating stations and there was plenty of gain. There was no drift noticed and the Centrios received most of the stations heard on my Kenwood. While the wide bandwidth made for pleasant listening, the radio does not have the circuits required for serious dx-ing. It is, however, an excellent radio for the general listener whose interests cover AM, FM, SW, TV and who refers to the WX band from time to time. The software is pretty basic with 5khz steps on SW and 10 khz on AM. There are 10 memories for each band and you have to skip up through the various meter bands to direct enter. The buttons and digital readout are arranged thoughtfully in a central pod and are easy to find in the dark. The D cells last a long time.
My main complaint is with the retina-scarring on-off led. It is bright even in direct sulight, but in a dark bedroom, it is blinding. The problem was solved with the application of a bit of black tape. I did notice when I was in town that some of the TV and FM stations put a few audio spikes in the SW band. This may be a problem for those in RF-loaded locations. The Centrios has replaced my old "drifty 350" for general carry-around use: sometimes I listen to SW, sometimes to FM or TV and sometimes I check the weather. It's nice to have it all in one box.
For those in the USA, the agents are: Orbyx Electronics, LLC,
501 South Cheryl Lane, Walnut, CA, 91789

It's a single-conversion radio. Forget it! (Just "Google" < single-conversion vs. dual-conversion > for more information.)
>
> The Sony unit that lots of people like appears to have a smallish
> speaker. I just read about a KA2100 model that looks interesting.
> Kaito PLL Synthesized Dual Conversion AM/FM Shortwave Radio, KA2100
> athttp://www.amazon.com/Kaito-Synthesized-Conversion-Shortwave-KA2100/d..

You might be satisfied with the Kaito (Redsun) KA-2100 but note that it costs more than the Sony ICF-SW35 and is more complicated to operate. Build quality is also "iffy."
>.
>
> The KA2100 appears to have SSB.

An external module must be purchased separately and attached to the radio in order to listen to SSB transmissions, This module appears to be available only from eBay sellers in China. This makes a complicated tuning procedure even MORE complicated, not even to mention the expense.

You do NOT need to know Morse Code in order to receive an amateur license though it is extremely helpful to know it.
>
> What would really be cool is to find a reasonably priced desk top
> SW receiver that was built into a stereo receiver. I have an ancient

> receiver that is almost dead (Sansui 771) and it would be cool to buy

> anything like that :-)

Forget it.

By the way, you had mentioned that "you do not need memories." Actually you will find that, when you have them, you will use them (to a greater or lesser extent). Also, with the Sony ICF-SW35, the use of its memories is part of the "work-around" to its lack of a keypad that I mentioned.

>From your original post, I deduced that you were interested in a small portable shortwave portable that worked better than your Mini 300PE yet was inexpensive and simple to operate. The Sony ICF-SW35 fills that bill on all counts. Other radios in its price range may appear to offer as much or even more in features but remember - each new feature means more complication in use. And most other low-cost portable shortwave receivers just do not have Sony's build quality.

Some here have recommended the Sony ICF-SW7600GR. This happens to be my absolute favorite portable shortwave receiver but I did not recommend it to you because it is much more expensive than the ICF-SW35, it needs an external antenna for best performance, and it is much more complicated in use, more so than your post leads me to believe you want. If I'm wrong in this assessment, then check out the ICF-SW7600GR on Amazon, Universal Radio, AES, or another site. You can also read reviews on eHam. It is, far and away, the best compact portable shortwave radio ever made (my opinion, of course). But I do not believe it is what you really want, at least from what you said and the questions you've asked. Such a radio would be, I'm afraid, VERY intimidating to you such that you would either pack it away or, worse, sell it. It could cause you to lose interest in the hobby (much as giving a raw teenager an Indy race car might stifle their interest in driving! They would not know what to do with it!)

Stay with something relatively simple and inexpensive (though sophisticated) such as the Sony ICF-SW35 and learn to operate it to full advantage. Then, as you become more enamored of the shortwave hobby, you will be able to upgrade, if desired, and you won't be fooled by manufacturers' or dealers' "hype" (for example, by even CONSIDERING a single-conversion Grundig YB 550PE, a mediocre at best performer).

I hope you understand that I am not showing you any disrespect whatsoever. I am trying to give you advice based on my own almost fifty years as a radio hobbyist and based on what you yourself asked. Others here, of course, will have their own opinions and may (probably will) disagree with me.

But if you do buy a Sony ICF-SW35, I believe you will be very pleased.

Best of luck,

Joe

IBOC Crock - I would enjoy it more -if- you simply posted
something positive related to Over-the-Air Radio :

* An Interesting Shortwave Radio Broadcast that you Heard.

* An Unusual AM/MW Radio DX Catch that you Heard.

-or- Even a 'personal' IBOC Listening "Observation" that you yourself have experienced : Be It Good -or- Be It Bad.

other than that - the constant anit-iboc posts have no added value and are boring, Boring. BORING ! ~ RHF
.

2245. DW to cut back DRM transmissions?

Newsgroup: rec.radio.shortwave
Date: 2007-10-19 00:35:02 UTC
From: dxAce <dxAce@milestones.com>
Message-ID: <4717FBB6.DA2F898B@milestones.com>

"Deutsche Welle will significantly reduce the DRM transmissions in the
coming winter season (from Oct 28) if no schedule changes will be made
at short notice. Nothing from Woofferton and Moosbrunn anymore. 3995 kHz
will be on air at night only on weekends and not at all between 0300 and
0400. Otherwise during daytime only one frequency from Sines anymore."

Good to know their sales people will be up to date so as to dispell
any confusion that might exist about just what HD can and can't do for
you. And which stations actually sound different because of HD and
where you can and can't get a clear signal from said stations.!!!!

I want to stay simple.

And most other low-cost portable
> shortwave receivers just do not have Sony's build quality.

All the Sony products (TVs, Stereo Receivers, computers)I have used
in the past have been 1st class.

>
> Some here have recommended the Sony ICF-SW7600GR. This happens to be
> my absolute favorite portable shortwave receiver but I did not
> recommend it to you because it is much more expensive than the ICF-
> SW35, it needs an external antenna for best performance

That is something I have to think about. I do like the simplicity of
this little unit I got at Radio Shack.
Just turn it on, extend the antennae and select the band. If the ICF-
SW35 works sort of similar, that
might be the best thing for me, instead of having to learn all this
arcane stuff. If I really get into SW, then

I can eventually go for something much more complicated, with more
features, and more capabilities.

, and it is
> much more complicated in use, more so than your post leads me to
> believe you want. If I'm wrong in this assessment, then check out the

I think you are right.

It could cause you to lose interest in the hobby (much
> as giving a raw teenager an Indy race car might stifle their interest
> in driving! They would not know what to do with it!)
>
> Stay with something relatively simple and inexpensive (though
> sophisticated) such as the Sony ICF-SW35 and learn to operate it to

I'll check the ICF-SW35 out. Saw it for $89.95 on Amazon. Not
expensive considering what it does.

Then, as you become more enamored of the shortwave
> hobby, you will be able to upgrade, if desired, and you won't be
> fooled by manufacturers' or dealers' "hype" (for example, by even
> CONSIDERING a single-conversion Grundig YB 550PE, a mediocre at best
> performer).

Yeah - a lot of hype - most which I don't even understand what they
are saying, at this point.

>
> I hope you understand that I am not showing you any disrespect
> whatsoever. I am trying to give you advice based on my own almost
> fifty years as a radio hobbyist and based on what you yourself asked.

> will) disagree with me.
>

No - thanks for explaining the tradeoffs.
I think everyone will have a different opinion and there is not really
a "bad" choice. It is what I will
be happy with in the short term and long term.

> But if you do buy a Sony ICF-SW35, I believe you will be very pleased.
>

Thanks, Joe.

In January of this year, I bought a new Toshiba 27 inch screen flat screen CRT (Cathode Ray Tube) tv set from Cowboy Maloney's Electric City store.HUMPH! a few days later it developed a smudge on the bottom of the screen.I phoned Cowboy Maloney's, they said, Bring it back.I did and I looked at some tv sets on display in their store.I bought a new Sony (I paid around $38.00 difference in price on the Sony, more money) www.cowboymaloney.com Trinitron Wega 27 inch screen flat screen tv set.When I got home with it and hooked it up to my DirecTV set top box, I was amazed at how much better the tv channels look on my Sony tv set.It even cleans up the old, old, old movies I like to watch on tv and makes them look fresh and new.

And skinny twin sister (she is not my sister) started on that new wooden fence at her house next door to me in early Feburary of this year.I told her and those other divorced women over their that fence won't be fineshed in three months and here it is almost the third week of October and they haven't hit another lick on that fence yet.Vanessa is moving back in over there.I stepped over there half an hour ago.She and skinny twin sister are putting her bed together.

You can make a home made transmitter and Morse Code Key that will fit in your shirt pocket and send Morse Code around the World.

It needs some work, especially the antenna system. But here's what
I've got so far:

* Yaesu FT-857D mobile HF transceiver (with full general-coverage).
It runs off 12 volts and is connected via a cigarette lighter plug.
http://www.yaesu.com/indexVS.cfm?cmd=DisplayProducts&ProdCatID=102&encProdID=8CBB7C4BDBAF4
0129AD4253A4987523C&DivisionID=65&isArchived=0

* Yaesu ATAS-120 antenna
http://www.universal-radio.com/catalog/hamantm/4547.html

Car is 2007 Dodge Caliber SXT.

The transceiver is genuinely awesome IMHO.

The antenna system, on the other hand, is a giant disappointment. I
wish I had gone with an automatic antenna tuner and a whip, or a
manually-controlled screwdriver antenna instead.

Ignition noise is a problem at higher engine RPMs. It limits the
usefulness of hamming but doesn't affect SWL as much due to the
generally stronger signals.

If you're all interested, I'll keep you informed as I work out the
bugs. In the meantime, anyone want to buy a garbage expensive
automatic screwdriver antenna? :)

I agree that there are many good Chinese radios with better features,
but it is like comparing apples to grapefruit. There is nothing like
the Centrios in the market in its price range. It has very good sound
with no hint of boomy bass. I have listened to jazz on it and was
surprised at the clean bass line. I was going to suggest that you seek
one out in a store and test it but I don't think it is very widely
distributed in the USA. Circuit City would be the logical place to
look but the Centrios is not to be found in their listings so it is
probably a moot point.
There is no small hand-held that sounds as good or covers such a
range of services. I would think you would have to see the radio
before condemming its workmanship.

Looking at the brochure I see it has a variety of DSP options; does
yours have adaptive noise cancellation? Properly implemented,
adaptive noise cancellation algorithms reportedly handle periodic
noise like ignition whine quite well.

Mike {M II} ,

It is a 'relative "relational' analogy' and has meaning when
it is Read and Understood in the 'context' of the entire Post.

The new evolving Republican Election Game Plan is to
Attack the "Do Nothing" Democrat Controled Congress.

Get 'the people' to Vote Against the Democrats in Congress
in 208 -and- It is thought that 'the people' will also Vote Against
the Democrat Presidendial Canadate in 2008
- - - A Falling Tide Sinks All Ships -sos-

The Political Rational {Thinking} Follows :

1 - In 2004/6 the Voters wanted a Change and kicked the
Republicans out of Control of both Houses of Congress.

2 - The Democrats that are now in Control of Congress are
un-liked by the Voters more than President Bush.

3 - The Voters are Anti-Bush and therefore 'potentially'
Anti Any Republican Presidential Candidate in 2008.

4 - The only real 'issue' that the Republicans in Congress
have to run on in 2008 is : "We Are Not The DO NOTHING
Democrats In Control Of Congress Who Have Acomplished
Nothing In The Last Four Years."

5 - Followed By The Concept of REVERSE "Coat-Tails"

-but- First the Concept of "Coat-Tails" : Meaning that a Strong
Presidential Candidate can Carry-a-Long their Party Members
in to Congress. = "A Rising Tide Lifts All Ships"

-now- The Concept of REVERSE "Coat-Tails" sees a Greatly
Un-Liked Poorly Performing Democrat Controlled Congress
Dragging Down the Party's Presidential Candidate causing
both the Loss of Congress and the Presidency.
= A Falling Tide Sinks All Ships -sos-

"The Tide" -being- 'Public Opinion' {The Will of the Voters}

enough said ~ RHF

"Ford Focus points the way to mobile audio's future"

"Ford has announced that its new 2008 Focus will be the first small and relatively inexpensive car aimed at younger buyers to feature their Sync audio technology that essentially puts the Internet and complete audio control in your car. It will be an option on the Focus (it's actually standard in Ford's more expensive lines), and it will run about $400 (or, in other words, about a hundred dollars more than a pre-installed HD or Satellite Radio). But consider what those bucks will buy you: Now consider what this means for HD or Satellite as an "option."

Ha! Ha! HD Radio loser! RHF! Eduardo! BMW is going with the same remote iPod/iPhone in-dash streaming and Hyundai gave up on HD Radio for STANDARD Satellite Radio!

2281. 2008 Buick, Hummer and Saab to get XM satellite radio

Newsgroup: rec.radio.shortwave
Date: 2007-10-19 12:20:28 UTC
From: IBOCcrock <ibocisacrock@yahoo.com>
Message-ID: <1192796428.609059.5700@i13g2000prf.googlegroups.com>
Source record: 128101

"2008 Buick, Hummer and Saab to get XM satellite radio"

"Earlier we spoke about Ford installing HD radio for 2008 models. This time the news is from GM with XM satellite radio standard on all 2008 Buick, Hummer and Saab models. The automaker has announced that all 2008 models will now come with a three month subscription to XM, which can be extended for about $12 a month. GM has previously made XM satellite radio standard on several 2008 models counting the Chevrolet Malibu, Silverado, Tahoe, Cobalt, Corvette and Impala; Saturn Vue, Outlook, Aura and Sky; GMC Acadia, Yukon and Sierra; and the Pontiac G5 and Solstice. Again, XM satellite radio is already customary on all Cadillac models."

http://www.automotto.org/entry/2008-buick-hummer-and-saab-to-get-xm-satellite-radio/

Ford's HD Radio is only a $350 dealer-installed, point-of-sale option (Ford owns Visteon and Ford is an investor in iBiquity) , as Ford goes standard with Sync. It's over for any chance of standard HD Radio - Ha! Ha! Edurado! Take this to your little research staff - are they still laughing, now?

> Its a ball and socket type connection.
> Should i use something like Loctite on it?

You can try Loctite. You can also try taking the antenna apart and seeing if you can fix whatever is wrong with it. It should not fall off, especially on a radio that is so new. (Antennas are not hard to fix but the process is a "pain" because of the size of the parts - small.) Before you try any of those, however, you may want to call Eton's toll-free number and ask about a warranty repair if your radio is still covered. If not, consider buying a replacement antenna - go here: < http://www.etoncorp.com/orderparts > and scroll down until you see < E5/G5 Telescopic Antenna - $14.95 >. That price is reasonable. I suggest buying a couple of them. Whip antennas are a weak point on all portable radios. I had to fix the antenna for my Realistic DX-400 - replacement antennas are no longer available for that model - and I learned my lesson. I now have several replacement whip antennas for all my portables.

Best,

Joe

2290. Heard KIDO 580 kHz @ 7 AM

Newsgroup: rec.radio.shortwave
Date: 2007-10-19 16:16:24 UTC
From: RHF <rhf-newsgroups@pacbell.net>
Message-ID: <1192810584.469289.139690@i38g2000prf.googlegroups.com>

Briefly heard KIDO with Station ID on 580 kHz 5 KW
from Boise, ID @ 7 AM over KMJ-AM Fresno, CA
about 500 Miles to the North.

KIDO 580 kHz => http://www.580kido.com/
http://www.radio-locator.com/cgi-bin/finder?call=KIDO&sr=Y&s=C
http://www.fcc.gov/fcc-bin/amq?list=0&facid=17396

Then back to the Blinking Blue Light from KMJ 580 kHz
50 KW in Fresno, CA about 100 Miles to the South.
KMJ 580 kHz => http://www.kmj580.com/
http://www.radio-locator.com/cgi-bin/finder?call=KMJ&sr=Y&s=C

With Three Exceptions - I Ask Myself : What IBOC ?
All I See Is The Blinking Blue Light !
In That Distant Land* Where IBOC Fears To Go :
Life Exists and Radio Listeners Live Beyond the 10mv/m Contour.

Hillary Clinton's Communist Chinese Fundraisers

An unlikely treasure-trove of donors for Clinton

The candidate's unparalleled fundraising success relies largely on the least-affluent residents of New York's Chinatown -- some of whom can't be tracked down.

By Peter Nicholas and Tom Hamburger
Los Angeles Times Staff Writers

October 19, 2007

NEW YORK - Something remarkable happened at 44 Henry St., a grimy Chinatown tenement with peeling walls. It also happened nearby at a dimly lighted apartment building with trash bins clustered by the front door.

And again not too far away, at 88 E. Broadway beneath the Manhattan bridge, where vendors chatter in Mandarin and Fujianese as they hawk rubber sandals and bargain-basement clothes.

All three locations, along with scores of others scattered throughout some of the poorest Chinese neighborhoods in Queens, Brooklyn and the Bronx, have been swept by an extraordinary impulse to shower money on one particular presidential candidate -- Democratic front-runner Hillary Rodham Clinton.

Dishwashers, waiters and others whose jobs and dilapidated home addresses seem to make them unpromising targets for political fundraisers are pouring $1,000 and $2,000 contributions into Clinton's campaign treasury. In April, a single fundraiser in an area long known for its gritty urban poverty yielded a whopping $380,000. When Sen. John F. Kerry (D-Mass.) ran for president in 2004, he received $24,000 from Chinatown.

At this point in the presidential campaign cycle, Clinton has raised more money than any candidate in history. Those dishwashers, waiters and street stall hawkers are part of the reason. And Clinton's success in gathering money from Chinatown's least-affluent residents stems from a two-pronged strategy: mutually beneficial alliances with powerful groups, and appeals to the hopes and dreams of people now consigned to the margins.

Clinton has enlisted the aid of Chinese neighborhood associations, especially those representing recent immigrants from Fujian province. The organizations, at least one of which is a descendant of Chinatown criminal

enterprises that engaged in gambling and human trafficking, exert enormous influence over immigrants. The associations help them with everything from protection against crime to obtaining green cards.

Many of Clinton's Chinatown donors said they had contributed because leaders in neighborhood associations told them to. In some cases, donors said they felt pressure to give.

The other piece of the strategy involves holding out hope that, if Clinton becomes president, she will move quickly to reunite families and help illegal residents move toward citizenship. As New York's junior senator, Clinton has expressed support for immigrants and greater family reunification. She is also benefiting from Chinese donors' naive notions of what she could do in the White House.

Campaign concerns

As with other campaigns looking for dollars in unpromising places, the Clinton operation also has accepted what it later conceded were improper donations. At least one reported donor denies making a contribution. Another admitted to lacking the legal-resident status required for giving campaign money.

Clinton aides said they were concerned about some of the Chinatown contributions.

"We have hundreds of thousands of donors. We are proud to have support from across New York and the country from many different communities," campaign spokesman Howard Wolfson said. "In this instance, our own compliance process flagged a number of questionable donations and took the appropriate steps to be sure they were legally given. In cases where we couldn't confirm that, the money was returned."

The Times examined the cases of more than 150 donors who provided checks to Clinton after fundraising events geared to the Chinese community. One-third of those donors could not be found using property, telephone or business records. Most have not registered to vote, according to public records.

And several dozen were described in financial reports as holding jobs -- including dishwasher, server or chef -- that would normally make it difficult to donate amounts ranging from $500 to the legal maximum of $2,300 per election.

Of 74 residents of New York's Chinatown, Flushing, the Bronx or Brooklyn that The Times called or visited, only 24 could be reached for comment.

Many said they gave to Clinton because they were instructed to do so by local association leaders. Some said they wanted help on immigration concerns. And several spoke of the pride they felt by being associated with a powerful figure such as Clinton.

New take, old game

Beyond what it reveals about present-day campaign fundraising, Chinatown's newfound role in the 2008 election cycle marks another chapter in the centuries-old American saga of marginalized ethnic groups and newly arrived immigrants turning to politics to improve their lot.

In earlier times, New York politicians from William "Boss" Tweed to Fiorello LaGuardia gained power with the support of immigrants. So did politicians in Philadelphia, Cleveland, Chicago and other big cities.

Like many who traveled this path, most of the Chinese reported as contributing to Clinton's campaign have never voted. Many speak little or no English. Some seem to lead such ephemeral lives that neighbors say they've never heard of them.

"This is a new game," said Peter Kwong, a professor at Hunter College in New York who studies Chinatown communities across the country. Historically, Kwong said, "voting in Chinatown is so weak" that politicians did not go out of their way to court residents.

"Today it is all about money," he said.

The effort is especially pronounced among groups in the Fujianese community. More than a decade ago, Fujianese cultural associations ran gambling operations and, more ominously, at least one was home to a gang that trafficked in illegal Fujian native immigrants.

The human-smuggling problem came to a head in 1993, when a cargo ship, the Golden Venture, ran aground off New York City. As shocked police and immigration officials looked on, hundreds of Fujian natives who had spent weeks below deck struggled to make it to shore. Several died in the attempt.

A crackdown by the FBI's organized-crime task force led to the indictment of more than 20 Fujian native traffickers. Today, the problem has substantially dissipated, says Konrad Motyka of the FBI's New York field office, who participated in the investigation of the Golden Venture.

Although Motyka is wary of the havoc wreaked in the past by Fujianese organized crime, he said: "I welcome signs that the community is participating in politics."

High hopes

At his tiny restaurant in the south Bronx, which has one table and a takeout counter, Chang Jian Lin displays a prized memento: a photo of himself and Clinton. The picture was taken at a fundraising banquet in Chinatown this spring.

Lin and his wife, who also works in the restaurant, said through an interpreter that they believe Clinton, if elected president, will reunite their family. The Lins' two teenage children remain in Fujian, a mountainous coastal province in southeastern China opposite Taiwan.

"If she gets to be the president, we want our children to come home," Chang Jian Lin said.

Campaign officials point out that Clinton has sponsored legislation aimed at family reunification; the proposals failed. And immigration measures being discussed in Congress would assign a lower priority to family reunification, which tends to bring in poor people, and give preference to immigrants with more-lucrative job skills.

Moreover, the Lins appeared to have an exaggerated impression of a president's ability to change such things as immigration laws single-handedly.

Kwong thinks Clinton may be "exploiting the vulnerabilities of recent immigrants."

Nonetheless, Lin is planning to attend another Clinton fundraiser, a birthday bash next week. He said his support rested on more than his hope for reuniting his family. "Besides the immigration issue with my kids, the overall standard of living will improve for the Chinese people" living in the U.S., he said.

He has never before supported a U.S. politician and, not yet a citizen, he is barred from voting. But when Fujianese community leaders asked him to donate to Clinton, he said, he eagerly contributed $1,000. Immigrants who have permanent resident status can legally make campaign contributions.

Coming up with the money was hard, Lin acknowledged, adding: "The restaurant is really small."

Missing persons

The tenement at 44 Henry St. was listed in Clinton's campaign reports as the home of Shu Fang Li, who reportedly gave $1,000.

In a recent visit, a man, apparently drunk, was asleep near the entrance to the neighboring beauty parlor, the Nice Hair Salon.

A tenant living in the apartment listed as Li's address said through a translator that she had not heard of him, although she had lived there for the last 10 years.

A man named Liang Zheng was listed as having contributed $1,000. The address given was a large apartment building on East 194th Street in the Bronx, but no one by that name could be located there.

Census figures for 2000 show the median family income for the area was less than $21,000. About 45% of the population was living below the poverty line, more than double the city average.

In the busy heart of East Broadway, beneath the Manhattan Bridge, is a building that is listed as the home of Sang Cheung Lee, also reported to have given $1,000. Trash was piled in the dimly lighted entrance hall. Neighbors said they knew of no one with Lee's name there; they knocked on one another's doors in a futile effort to find him.

Salespeople at a store on Canal Street were similarly baffled when asked about Shih Kan Chang, listed as working there and having given $1,000. The

store sells purses, jewelry and novelty Buddha statues. Employees said they had not heard of Chang.

Another listed donor, Yi Min Liu, said he did not make the $1,000 contribution in April that was reported in his name. He said he attended a banquet for Clinton but did not give her money.

Clinton "has done a lot for the Chinese community," he said.

One New York man who said he enthusiastically donated $2,500 to Clinton doesn't appear to be eligible to do so under federal election law. He said he came to the United States from China about two years ago and didn't have a green card.

Out of the periphery

A key figure helping to secure Asian support for Clinton is a woman named Chung Seto, who came to this country as a child from Canton province and has supported Bill and Hillary Clinton since the 1990s. She called Fujian natives' support for Hillary Clinton the beginning of civic engagement for an immigrant group that had long been on the periphery.

She said she stationed translators at the entrance of one event to try to screen out improper contributions.

Qun Wu, a 37-year-old waiter at a Chinese restaurant in Flushing, saw a reference to a Clinton fundraiser in a Chinese-language newspaper. He took a day off from work to go. Though he only makes $500 a week, he considers his $1,000 donation to be money well-spent. He got his picture taken with Clinton, hung it prominently in his house, then had color reprints made and sent to family in China.

"Every day I go home and see it," he said. "I see my picture with Hillary, and I feel encouraged. It's a great honor."

Many, on the other hand, said they gave for reasons having more to do with the Chinese community than with Clinton. He Duan Zheng, who gave $1,000, said of the Fujianese community: "They informed us to go, so I went.

"Everybody was making a donation, so I did too," he said. "Otherwise I would lose face."

FBI Questions Chinese Student Leaders at Eastern U.S. Universities

...several of Beijing's special agents who were stationed at the Chinese associations in New York have escaped to China.

Mr. Xu said that Americans can't fully understand how evil the CCP could be, and hence independent media needs to continue to expose it. This will help the United States take action against the special agents and learn more about the real situation of the CCP and China.

Chinese Student Associations Are Key Bases for CCP Spies

The New York University Chinese Culture Club (NYUCCC), under the control of the Chinese Communist Party's (CCP) Consulate, initiated a petition on June 8, 2007 on its website against the International Chinese Dance Competition.

Since then, the issue of Chinese Students and Scholars Associations (CSSAs) becoming umbrella organizations of the CCP spies and the heads of CSSAs as spies themselves were put on the table. Dozens of former CSSA chairs and main contact persons openly testified that the CCP Embassies and Consulates manipulated and used CSSAs in various universities to conduct "illegal activities" beyond the scope of their normal diplomatic businesses.

Among them, the Columbia University Chinese Students and Scholars Association (CUCSSA) is the core of the CCP CSSA spy organization. Two of the three CUCSSA advisors are Chinese Consulate officials. The heads of the CUCSSA not only directly follow orders from the Chinese Consulate, but also get fixed incomes from the Consulate, have regular meetings at the Consulate, and implement the CCP's policies outside of China. These people act as agents for the CCP without registering with the U.S. Government, hence have already violated U.S. law.

At the same time, former Chinese diplomat in Australia Chen Yonglin took a week-long lecture tour in Canada early June. He openly named CSSAs as overseas groups controlled by the CCP that act as agents for the CCP outside China.

The CCP's spy activities in U.S. have attracted tight attention from the Federal Bureau of Investigation (FBI). In mid June, the FBI announced that it would send officers to top U.S. universities to provide training on how to watch out for suspicious activities, which caused stirs on campuses. In early July, FBI published Chinese advertisements on three Chinese newspapers in San Francisco for a week, encouraging American Chinese to report on CCP spies. The FBI's monitor on the CCP's favorites moves towards the open.

CSSA is An Extended Organization of the Chinese Consulate
According to former chair of the University of Arizona CSSA Ma Youzhi, before the 1989 Tiananmen Square Massacre, almost all overseas CSSAs were like an extended organization of the Chinese Embassies and Consulates. The Chinese Consulate monitored and managed Chinese students and visiting

scholars abroad through CSSA.

At the time of the Tiananmen Square Massacre, almost all CSSAs in U.S. condemned the CCP's slaughter. Many CSSAs freed themselves from the CCP's control then and formed the Independent Federation of Chinese Students and Scholars. However, the CCP later bought over some people who were willing to become agents for the CCP, or directly sent spies to take leading roles in CSSA. Many CSSAs were again controlled by the CCP and have become an extended spy organization for the CCP.

Two of Three Advisors for CUCSSA Come From the Chinese Consulate
Two of the three advisors for the CUCSSA come from the CCP's General Consulate in New York. They are the Counselor for Education Fanglin Ai and Consul Da Yao, who is in charge of New York City and Long Island.

On June 8, 2007, the NYUCCC initiated a petition on its website against the International Chinese Dance Competition. On June 17, CUCSSA published on its own website an open letter supporting NYUCCC, and published nine articles attacking and slandering Falun Gong on the same day. All of these articles attached the URL of the Chinese Embassy in the United States.

CUCSSA Is a Key Base for the CCP spy organization

A source disclosed to The Epoch Times that the CUCSSA has always been a focal point for the CCP's force development overseas. It is the CCP's most competent tool in conducting "illegal activities" beyond the normal consulate business scope. The CUCSSA takes on important political tasks, including monitoring famous human rights activist Wei Jingsheng when he was studying at the Columbia University. Now it is focusing on attacking and slandering Falun Gong.

Tang Baiqiao, former student leader of the Tiananmen Democratic Student Movement in 1989 and the chairman of the China Peace and Democracy Alliance, witnessed in person how the Chinese Consulate manipulated CSSA between 2001 and 2003 when he was studying at the Columbia University.

Tang said that the CUCSSA has been an important base inspected and controlled by the CCP. The CCP treated it as a spy center. One reason was that Columbia University is a famous school in New York, which is the USA's economic center with a lot of foreign students. Another reason is that many famous Chinese people and children of CCP's high-ranking officials graduated from Columbia University. Since 1989 many dissenters went there for study or as visiting scholars.

According to insiders, the chairman and deputy chairman of CUCSSA are required to report to the Consulate separately. The Consulate will check these two reports and verify the accuracy of the reports to test their loyalty to the CCP. If these people go back to China after graduation, they are able to be promoted quickly through the political capitals gained overseas. If they stay overseas, they will be assigned special missions and act as CCP's spies by infiltrating the western society.

MSS (Ministry of State Security of China) Planted Many of Spies at Columbia University

Commentator Li Tianxiao, Ph.D in politics, studied from 1986 to 1994 at Columbia University. He said that the Chinese Consulate in New York controlled and inspected Columbia University very tightly and often sent people to do investigations or attend conferences in order to keep track of Chinese students.

He said, "I have heard that the MSS had planted spies at Columbia University and brought dictatorial trickery from mainland China to control and keep watch over overseas students."

Attacks on Falun Gong, Acting as Pawns for the CCP

On April 20, 2007, David Matas, a member of the Canadian Independent Investigation Team, and famous international human rights lawyer, and Dr Yang Jingduan and Dr. Li Xiangchun, both Falun Gong practitioners, attended conferences held at Princeton and Colombia Universities separately to expose the CCP's crime of organ harvesting.

The CCP sent CUCSSA to stir up trouble at the conference. They continuously and purposefully interrupted speakers and even shouted out comments during the meeting. Their strange behavior and irrationality made Western professors and students speechless. Later, CUCSSA announced on its website, "CUCSSA presented strong coherence and combative strength through this event." They made no attempt to hide its identify as pawns for the CCP.

Li also pointed out that the main political goal for the CCP in recent years was to persecute Falun Gong. CUSSSA has been sparing no efforts in attacking Falun Gong and has never concealed its secrets. It is very clear who is the one behind the scene. Li said that CSSA overseas have been generally controlled by the CCP. However, it is rare to see CUCSSA's open and public slandering of Falun Gong. Many associations carried out the commands from the CCP secretly and tried to conceal themselves by using disguises.

On July 17, fourteen articles still were kept in the news column of its website, five of them attacking Falun Gong. The articles were filled with harsh words of the CCP propaganda, such us "Anyone who violates the strong force anywhere should be wiped out!"

Important Meetings Periodically Held In Chinese Consulate

According to Tang Boqiao, the CUCSSA periodically holds meetings at the Chinese Consulate, including important student association meetings. Large student association events enjoyed complete funding from the Chinese consulate, and consulate officials give lectures at every meeting. One large scale annual ball to celebrate the New Year is held in the student center auditorium and the consulate pays $15000 to rent the space for the event.

One CUCSSA bulletin from June 6, 2007 reads, "CUCSSA student officials recently attended a colloquia held by the general consulate. The conference included a greeting leaders from the Chinese General Consulate conveying warm regards from the homeland and its people to oversea students in the

Great New York Area."

The analyst noted that the message in the greeting was clear: the Chinese Consulate controls student associations in the Great New York Area.

Payment to the CUCSSA Chairman

According to some reports, eight years ago, the Chinese Consulate in New York deposited $3000 and $1500 respectively into the special credit cards for the chairman and deputy chairman of CUCSSA as a reward every month, although the credit card isn't registered under the president's name.

Tang expressed that when he was attending Columbia, the CUCSSA president would not only have meals periodically paid for by consulate officials, but would also see a $1500 allowance from the consulate every month. This later became known to other students. "I think the amount of the allowance has become even higher," said Tang.

In a lecture he gave in Canada this June, former CCP diplomat Chen Yonglin discussed the techniques CCP embassies employed to control overseas students. One of the strategies is the scholarship programs by the CCP Ministry of Education to overseas students who work actively for the Chinese consulate.

Assisting the CCP with Buying-off of "China Experts"

The CCSA serves another important political function: influencing research experts in the field of Chinese studies who work in American universities.

According to Tang, after the June 4 incident in 1989, these "China Experts" have basically become the critics of the current CCP regime, so the CCP invested tremendous effort to sway them. These "experts" are often professors in American universities, so the Chinese regime uses student associations to influence them. Tang added that he had heard of, and personally encountered, many incidents of the CSSA chairman sharing meals together with these China experts and Chinese consulate staff.

Tang stressed that such tactics yield a great benefit to the CCP, but they are also great hindrance to and even directly harm the Chinese people. For a majority of the Chinese people who want the world to know about the CCP's unlawful deeds their voice is essentially silenced, as these student associations ensure that the government is able to maintain its cover-up.

USD $30-$70 for Welcoming Chinese Leaders

In addition, the CSSA at every university also works to lure students with money to attend welcome gatherings when a Chinese leader comes to visit.

Tang recalled that one year, with Jiang Zhemin's visit to the U.S., CUCSSA sent an e-mail to students, informing them that anyone attending the welcome gathering would be paid $30, including spouses and children, who were also entitled to the full amount. A family of three would receive a total of $90 for being present.

The email was mocked by 99 percent of the recipients, as many students said it was not worth selling one's face for so little money. Others jokingly asked if they could get more money. The whole thing was seen as a laughing stock.

Not long after, when another Chinese dignitary came to visit, the Columbia University CSSA raised their offer to $70 a head.

Xu Kai-CUCSSA Chairman and Fanatical CCP Supporter

In June of this year, in his keynote address of the unveiling ceremony of the Victims of Communism Memorial , U.S. President Bush noted that communism and terrorism are no different, adding that both are a crime against humanity. Xu Kai, the current Columbia University CSSA president, was formerly a leader-class student in Qinghua University in Beijing. When U.S. President Bush delivered his speech at Qinghua University on February 22, 2002, Xu was one of the roughly 300 students chosen by the university to attend, representing the great trust that the Chinese regime places in this individual.

Whether out in public or on his own blog, Xu makes no effort to hide his support for the current Chinese regime and his fanaticism for communism; he has continued to make his stance known since he arrived in the U.S. for his studies. It is perhaps no surprise that Xu was hand picked by the Chinese consulate to be the chairman for Columbia's CSSA.

Xu has decorated his blog with several photos of himself with Chinese consulate staff, as well as photos where he's engaged in consulate organized activities.

According to an overseas Chinese student attending Columbia, Xu seemed to develop strong ties to the Chinese consulate shortly after his arrival. Many found this quite unusual, because such a relationship often takes time to develop; but not for Xu Kai.

FBI Counter-Espionage Agents Enter American Universities

In mid June 2007, in order to prevent foreign spies and hidden terrorists from conducting espionage operations, the FBI announced that they would send agents to all the major American universities. FBI officials openly admitted that America's biggest espionage threat comes from China

FBI special agents have reportedly contacted various universities, teaching school staff and students about potential foreign spies and terrorists. The bureau also guided these individuals on how to identify foreign special agents and trained them in ways to protect themselves. The head of Boston's FBI bureau claimed that such activities would certainly spread to all the major U.S. universities. He also pointed out that as open communities, university campuses become very easy targets for spies to infiltrate. The FBI urges these universities to stay on high alert for these types of activities. The news regarding the FBI's counter-espionage efforts has encouraged a lot of discussion among Chinese students and scholars. CSSA leaders are said to be quite concerned.

According to a report by the Xinhua News Agency, the official news outlet of the Chinese communist regime, a CSSA leader in the U.S.'s southwest region said, "Scholars and students involved in research for high-tech or engineering fields will have to watch their actions, so as to avoid being caught by the FBI and treated as spies."

The Xinhua report also stated that at University of Southern California, about 10 Chinese graduate students attending a Ph.D. program in advanced neurology have been closely monitored for the past two years. In the past two years, without exception, as soon as an individual from this group returned to China for a visit, they met with an FBI background investigation. After a young associate professor attended a conference in China, he became the subject of a year and half FBI investigation upon filing his visa application to return to the States.

FBI's Monitoring of CCP Favorites Going Public

From July 2 to 8, the FBI put ads in three Chinese San Francisco papers: China Press, Singdao Daily and World Daily. The ads sought assistance from members of the Chinese community to provide any information related to actions that could prove to be potentially dangerous to U.S. national security; the ads especially welcomed information regarding China's National Security Bureau.

"After the Soviet Union and Eastern European communism dissolved, the FBI honed in on the CCP's U.S. espionage operation; this took place long ago," said Li Tianxiao. "In the high-tech field, in big companies, especially in universities, such monitoring definitely exists. Specifically, just before the 1989 pro-democracy movement, many CCP members began to be monitored and it has continued ever since. They have no idea their cases have been thoroughly examined by the FBI."

Li pointed out that the once covert FBI monitoring of CCP favorites is becoming more apparent.

Chinese Bribes, Spies, and Politics

According to a former visiting professor at Yale University, Dr. Yuming Zhang, the Chinese regime has a large number of spies in the United States. An acquaintance of his working in the Chinese Consulate, who wishes to remain anonymous, disclosed to Dr. Zhang that, "The Chinese Consulate has placed people inside all student associations, Chinese churches, Chinese newspapers, Chinese communities, democratic organizations, and Falun Gong groups around New York. Their responsibilities are to gather information, propagandize the Chinese Communist Party's ideology, and sow discord."

A web of bribes, spies, and political pressure is leading dozens of Chinese student groups carry out the directives of the Chinese Communist Party.

The long arm of Beijing is reaching into U.S. universities and grasping control of student organizations, according to recent reports. A web of bribes, spies, and political pressure is leading dozens of Chinese student groups across the United States to carry out the directives of their local Chinese Consulates to suppress and slander groups not to the liking of the Chinese Communist Party (CCP).

The list of universities affected is long and diverse: Columbia University, New York University, the University of Rochester, U.C. San Diego, U.C. Santa Cruz, the University of Minnesota, and the University of Tennessee, Knoxville. These schools and many more all have a Chinese Students and Scholars Association (CSSA) or its equivalent with a political or financial connection to their local Chinese Consulate.

For example, the University of Tennessee's CSSA financial statement from 2005 showed that 80 percent of its budget, or $1,400, came from funds disbursed by "PRC Embassy" (the Chinese Embassy). There are at least 109 CSSAs across the United States, and now questions are being raised whether any others have similar connections to their local consulates.
...
A decade ago, Ms. Yanping Lu served as the chair of the CSSA at the Albert Einstein College of Medicine in New York. She told The Epoch Times that, at the time, she did not fully realize the Chinese Consulate was using her for espionage. She accepted small gifts from the consulate-on the order of $300

each-as a matter of routine and did not think about it further. Eventually, the consulate asked her to collect data on fellow students.

Mr. Yunqing You was elected president of the University of Minnesota CSSA in 2002. Soon he was introduced to a Chicago consular official named Jiacai Cheng. During the year that You was president, Cheng mailed him $3,000 in checks under his name. (You deposited them immediately in the CSSA account.)

"In fact, the so-called activity funds given by the consulate were not given to the student association," You told The Epoch Times. "Instead, the funds were given to the president individually... The checks are a direct bribe to the president. The consulate withholds checks if their directives are not followed by the president."

Most people don't know that there were actually 3 buildings which came crashing down on the day of 9/11.

The third building, WTC 7, can be seen here

http://video.google.com/videoplay?docid=-7750532340306101329

There is no mention of this building in 911 Omission Report.

Can fire make a building come crashing down at free fall speed?

If you think it can, patent the idea and make billions in the demolitions industry!

How do we know WTC 7 was demolished?

If WTC 7 collapsed in 6 seconds, and it takes 6 seconds to free fall from the roof of WTC 7, then you got it - WTC 7 underwent a free fall.

This means as the each floor was falling straight to the ground it did so without crashing into anything on the way. ONLY CONTROLLED DEMOLITION CAN ACCOMPLISH THAT!

PROPOSITION 1:
It took a total of 6 seconds for the roof of WTC 7 to reach the ground. This proposition is supported by the empirical,

http://video.google.com/videoplay?docid=-7750532340306101329
Collapse start time: 17 seconds
Collapse end time: 23 seconds
Total collapse time: 23-17 = 6 seconds

PROPOSITION 2:
A free fall from a height equal to the roof of WTC 7 would take 6 seconds. This proposition derives trivially through (Galilean) kinematical considerations alone:

Displacement = initial velocity * total time + 1/2 * acceleration * total time^2

or

s = ut + 1/2at^2
where
s = 174 m (height of building)
u = 0 m/s (building was stationary prior to collapse)
a = 9.8 m/s^2 (since gravitational field strengh averages at a constant)

Thus,
174 = 0 t + 1/2 9.8 t^2

Solving for t
t = sqrt(2 * 174 / 9.8)
= 5.9590
~ 6 seconds

Hey buddy, I would recommend that you go with that '7600GR. If you've enjoyed what you're hearing with that little 300PE and you have the $150 to spare, the '7600GR is a remarkable portable set. Sure, there's a bit that you'd need to learn here and there; but it's not rocket science (you can to it, Entfred, oh yes you can!). The '7600GR is pretty decent off the whip, in my opinion. And it comes with a reel-out wire antenna that you can clip to the whip to further enhance sensitivity, if you require.

If you're wanting to go with something cheaper, I'd probably take John S. Roadie's advice and go with that Degen DE1103 portable. Sold in the states as the KA1103. http://www.universal-radio.com/catalog/portable/0028.html

Sure, it's not a brand you've likely heard of, but it's got an excellent reputation among shortwave listeners. Both in terms of sensitivity (one aspect of this radio that continually prompts praise) and selectivity (two filter bandwidths, as opposed to the SW35's one...meaning greater ability to knock out interference from nearby stations that are imposing on what you're wanting to hear), I think it will beat the SW35. And the ability to directly input a frequency by keepad is another plus.

Yeah, the SW35 has the Sony name and reputation behind it; but the 1103 has established itself as a performer. And from indications in various shortwave fora, it's not as though there's any suggestion that the 1103 is poorly made or is subject to any habitual failures.

Yeah, I'd go SW7600GR first (with regard to the car analogy, let's face it, teens like fast cars; and you're not going to "wreck" a shortwave set) and DE1103 / KA1103 second. In truth, I'd likely consider a used SW7600G or SW7600 (predecessors to the SW7600GR) before opting for a SW35 (although I dont' know that I'd recommend a newcomer delving into the used market).

I'm afraid I don't have the time to expend on a full elaboration on all points raised here, as well as others that could be raised.

Anyway, all the best, whatever you decide.

I don't think you should find the '7600GR intimidating. After all,
cuhulin has one of these radios and presumably he's capable of using
it. From some of the content in his replies in this thread, you can
see just how idiotic this guy is, and yet, he presumably operates his
'7600GR successfully...

The YB550 was Grundig's answer to the Sony ICF-SW77?? Never heard
that one before. Sure you're thinking of the right radio there?
http://www.universal-radio.com/catalog/portable/0550.html

The YB550 arrived on the market when? late 2003 earliest?

Grundig's Satellit 700 was clearly more of an answer to the Sony ICF-
SW77 (in terms of performance, size, price and point of arrival on the
market).

Since the building actually took over twice that long to collapse, your "cipherin'" is meaningless, Jethro. In no way did the WTC collapses resemble a controlled demo.

Big Source of Clinton's Cash is an Unlikely Address in California

DALY CITY, Calif. -- One of the biggest sources of political donations to Hillary Rodham Clinton is a tiny, lime-green bungalow that lies under the flight path from San Francisco International Airport.

Six members of the Paw family, each listing the house at 41 Shelbourne Ave. as their residence, have donated a combined $45,000 to the Democratic senator from New York since 2005, for her presidential campaign, her Senate re-election last year and her political action committee. In all, the six Paws have donated a total of $200,000 to Democratic candidates since 2005, election records show. Their donations closely follow contributions made by a wealthy New York businessman.

See Donation record via WSJ here
http://online.wsj.com/public/resources/documents/info-DONATE-retro_sort.html

It isn't obvious how the Paw family is able to afford such political largess. Records show they own a gift shop and live in a 1,280-square-foot house that they recently refinanced for $270,000. William Paw, the 64-year-old head of the household, is a mail carrier with the U.S. Postal Service who earns about $49,000 a year, according to a union representative. Alice Paw, also 64, is a homemaker. The couple's grown children have jobs ranging from account manager at a software company to "attendance liaison" at a local public high school. One is listed on campaign records as an executive at a mutual fund.

s

So far what we have is a family of limited means donating an extraordinary amount of money (considering their income) to Hillary Clinton and in smaller part to other Democrats, that lives in a house that was once listed as Mr. Hsu's home address, which makes that connection very obvious.

http://wwwwakeupamericans-spree.blogspot.com/2007/08/hillary-clinton-paw-fam
ily-and-norman.html

Now lets take a look at Norman Hsu.

Norman Hsu's love of Clinton on display
http://www.latimes.com/business/investing/la-na-hsu11oct11,1,1834069.story?c

oll=la-headlines-business-invest

Hey Hillary, what's that big mark on your ear? It looks like $950,000 for a school that your favorite Chinese fundraiser, Norman Hsu, just happens to have been a board member of.

And in the case of the New School in Greenwich Village, it turned out to have some national resonance: Norman Hsu, a major Democratic donor active in Senator Hillary Rodham Clinton's presidential campaign and a New School trustee, was found to be a fugitive who had skipped out after a felony theft conviction in California 15 years ago.

Here's the bill, S.1710.
http://thomas.loc.gov/cgi-bin/cpquery/T?&report=sr107&dbname=110&
It's the Labor/HHS/Education spending bill that's being debated in the Senate right now. Do a search on "Clinton" a whole bunch of times (she has quite a few line items in this bill, $500k here, $250k there, $1.5 million over there) and you'll eventually land at this earmark.

New York Times
September 20, 2007

Norman Hsu, an apparel-industry executive and a major donor to Democratic candidates and causes, confessed to FBI agents last week that he had pressured investors in what he now admits were phony business deals to contribute to Democratic political campaigns, prosecutors said in an indictment that was unsealed today.

The complaint, filed in Federal District Court in Manhattan, accused Mr. Hsu of bilking at least $60 million from hundreds of investors in a nationwide Ponzi scheme, and using some of that money to illegally reimburse at least two people who made a total of $60,000 in campaign donations at his request.

While the complaint did not specify which candidates received the illegal or coerced contributions, federal authorities confirmed that one of them was Senator Hillary Rodham Clinton. Her presidential campaign has said it intends to return $850,000 to more than 200 people whose donations were bundled by Mr. Hsu.
...
The indictment said that while in Colorado, Mr. Hsu reached out to FBI agents on three occasions and asked to speak to them without his lawyers present. He is said to have told the agents that his business deals involved no real investments but were in fact fraudulent, and "admitted that he made implied threats to his investors to pressure them to contribute to political candidates he supported."

Working through two shell companies, Components Ltd. and Next Components Ltd., Mr. Hsu persuaded numerous investors from across country to give him money ostensibly to help secure short-term loans for various companies doing business in the apparel industry, the government said.

The Ponzi scheme had been not intended to generate political contributions even though several investors were bullied into making donations, David A.

Cardona, the special agent in charge of the F.B.I.'s New York office, said at a news conference today. Rather, Mr. Cardona said, it was the cachet derived from Mr. Hsu's political activities that gave his investment schemes a certain allure.

Those schemes, the complaint said, focused on several aspects of the apparel trade, from helping obtain letters of credits for wholly imaginary manufacturers to financing the importation of "high-end" Chinese clothing that did not exist. As in all Ponzi schemes, the government said, Mr. Hsu paid interest to the first wave of investors with principle invested by secondary waves and used this purported success to lure more investors.

The experience of Joel Rosenman - a New York investor referred to in the complaint only as "Victim 1" but whose identity was confirmed by several lawyers involved in the case - was presented in the indictment as indicative of the scheme as a whole. Mr. Rosenman's interactions with Mr. Hsu were also laid out in a civil suit filed Friday in New York County Superior Court.

Mr. Rosenman was introduced to Mr. Hsu by a mutual friend in 2003 and made an initial investment of $50,000 with Mr. Hsu. In return, he received a check for $57,000 postdated for four and a half months later. The indictment said that when Mr. Rosenman successfully cashed the check, it helped him develop trust in Mr. Hsu, who claimed to have lined up clothing deals with big-name companies like Nordstrom, L.L. Bean and Hugo Boss.

By 2007, Mr. Rosenman had created an investment fund, Source Financing Investors, with friends and relatives that funneled more than $40 million into Mr. Hsu's hands. In August, however, when reports about Mr. Hsu's shadowy past began to surface, Mr. Rosenman confronted Mr. Hsu, who assured him his investments were not in danger, the government said. But earlier this month, Mr. Rosenman went to cash a check in the amount of $1,031,300 that Mr. Hsu had given him and, according to the complaint, the bank refused to accept it. The civil suit filed by Source Financing Investors said that $40.2 million of its money is missing.

Ronald Minkoff, a lawyer representing Source Financing Investors, said he has asked campaigns that received contributions from Mr. Hsu and his network of investors not to dispose of the money.

"We are asking them to hold that money in escrow," Mr. Minkoff said. "We are trying to find what we can find."

Crime Stats:

- Number of individuals and businesses associated with the Clinton machine who have been convicted of or pleaded guilty to crimes: 47
- Number of these convictions during Clinton's presidency: 33
- Number of indictments/misdemeanor charges: 61
- Number of congressional witnesses who have pleaded the Fifth Amendment, fled the country to avoid testifying, or (in the case of foreign witnesses) refused to be interviewed: 122

Forgetful Clinton "friends":

Number of times that Clinton figures who testified in court or before Congress said that they didn't remember, didn't know, or something similar.

WTC7 contained utilities and support for the WTC complex. Emerg. Diesel Generators, very large storage tanks of fuel etc.

Not your typical Manhattan Office Complex.

You don't know what you are talking about. There is no evidence. Get a
clue, mans contribution is insignificant compared to the processes in
nature that add and subtract the CO2 levels.

He probably is refering to the balun which came with the AN-LP1.
It plugs into the feedpoint of the loop. The cable is then plugged into the balun.
It is of minor usefulness and is not neccessary for the operation of the AN-LP1.

This was definitely a problem at Buena Park. The Montecito site is not
ready; the toploading of the tower to be used is not done, so it is some
time before they switch.

Sony AN-LP1 'portable' Active Shortwave Antenna .
http://www.universal-radio.com/catalog/sw_ant/3676.html .
Coverage : 3.85 MHz - 21.95 MHz .
http://cgi.ebay.com/_W0QQitemZ130165085433 .

IIRC - The little 'extra' in-line Filter Module is actually an
AM/MW and FM Broadcast Band Filter that can be used
-IF- you are experiencing AM/MW and/or FM Band Radio
Interference. - - - Passes 2 MHz to 24 Mhz

Note - For most Shortwave Listener's (SWLs) who do not
live right next to an AM/MW and/or FM Radio Station's
Transmitter : It's use is not required.

No, you did not indicate that at all. The fact is that the transmitter is
installed, the internal AC and other wiring is about ready, but the riggers
have not replaced the upper guy on one of the three Montecito towers with
uninsulated top-loading guys. Once that is done, the tower has to be
measured an the ATU built or modified. They may have to do some detuning to
the other two towers.

They lack the ability to evaluate information in an independent way.

Their prejudices color their thought processes.

A good opinion is formed on a realistic reduction of available data and is subject to new and valid information. These people put way to much trust in someone else to provide data to them that conform to their preexisting internal biases.

In addition they generally ignore data that is not in conformance with their internal bias and place emphasis on data that does conform. Result is a skewed opinion not based in reality.

I recently got AM580 CKUA Edmonton Alberta on my radio in Winnipeg Manitoba.
It was around 7:30 in the morning, but it only lasted less than 5 min. It
came in so clear that I thought it was a local specialty AM station CJML
that was broadcasting temporarily, but then I heard the station call
letters.

You expect a "license" to be like a US license? What a moron, expecting the rest of the world to be like the US. You are one of the fuck-heads who think the US style of government, US morals, US "culture" and such should be imposed on other nations, and if they don't consent, invade them or embargo them.

In Ecuador, a driver license was a "carnet" and had two documents in a plastic folder... one was the renewable permit, and the other was the license, consisting of a multiple page "folder" with the appropriate seals and stamps on it. A radio station license was a legal document, on European (not American) long-form paper, in an official folder (carpeta) with fiscal revenue stamps. The Authorization was about 10 pages long. A ham license was a shorter version of the same thing. Neither radio station nor ham licenses had a "Suitable for framing" single piece of paper like US licenses in the era.

All such documents referred to the permitee's C�dula de Identidad number... the unique national ID card. Without an ID card, you could not even cash a check... so there was no identity theft there, something the US has yet to figure out.

Gee, all those other licences show up in the applicable Callbooks, poseur...

Prove it!

2365. Your call letters printed on a T-shirt $15 Shipped anywhere in the US 48 states

Newsgroup: rec.radio.shortwave
Date: 2007-10-20 18:34:47 UTC
From: TeesWithEase <TeesWithEase@aol.com>
Message-ID: <1192905287.814758.70260@z24g2000prh.googlegroups.com>
Source record: 128283

We will professionally print your call letters and city/state on a quality 100% cotton Hanes 6.1 ounce T-Shirt. This can be printed with black letters on a white shirt or white letters on a black shirt. There are three options:

1.) Small 1/4" letters/numbers on the front left breast of the shirt
2.) Large 1" letters/numbers across the front of the shirt
3.) Large 1" letters/numbers across the back of the shirt

Example:

AAA-ALZ
Huntington Beach, CA
USA

As stated in the title, we will print and ship the shirt anywhere in the 48 states for $15 total. Your shirt will be shipped to you within three business days.

Additional graphics, lettering, pictures, or drawings can be added to the shirt for a small additional charge, please E-mail for details. We are an Ebay Power Seller and PayPal Verified so order with confidence! Thanks for your time.

Prove that, just like your 'claims' of station ownership in Ecuador.

Prove that, just like your 'Eduardo' name, that you NEVER used in any context
other than that starting circa 2000.

Prove it!

The FCC disagrees with your claims, the State Department disagrees with your
claims... and as far as I know the State of California disagrees with your claims.

No, your only idiotic contribution here was to question why switching from one site to another might cause the signal to "cut out" (in fact, it was not cutting out, per Telamon, but going up and down in field strength). If they were having one of many kinds of issues, they might have been switching back and forth... such as testing a system to turn the "other site" on if the one in use failed (they might want to use the Buena Park auxiliary at night, when the new tower would not be under construction) and were going back and forth between the two. As we later found out, the new temporary site is not yet ready to operate, so the reason for the intermittency had to do with maintenance they did when they took a silent period after midnight and until 5 or 6 AM on Sunday... the normal time most AMs now choose to shut down when it is impossible to stay on the air for some maintenance.

No, they don't. I don't think I have ever delt with the State Depatment,
anyway. I am not a diplomat nor a representative of a foreign government.

> and as far as I know the State of California disagrees with your claims.

I have no idea what they could disagree with.

In another post, I named some well know, licensed, Ecuadorian hams that did not ever appear in call books in the period... the interesting thing I noticed in making the list (which also includes Pascal Michelet, Gerardo Brborich, Fuad Dassum, and a few others) is that all the ones not listed were not Ecuadorian citizens by birth and had a different "C&#65533;dula" code... whether that is a coincidence or just a bit of randomity I will never know.

You did not contribute anything to this thread, except asking why switching between sites would cause a staiton to cut on and off, which is a pretty dumb comment to begin with! You said nothing about the possible causes, or the status of Amy's Place as a temporary site while KFI's new tower is being constructed.

October 21 marks the 202nd Anniversary of the Victory over the combined French and Spanish fleets at the Battle of Trafalgar by by Vice-Admiral Horatio Nelson on October 21, 1805.

Listen for possible mentions of the Anniversary of the battle by the BBC.

I was fortunate enough to sail through the waters where the battle took place whilst serving in the US Navy, and have always considered Admiral Lord Nelson one of my heroes.

Lord Nelson died late in the battle.

Have an Icom R-75;

- wondered why it tunes all the way up to 60,000

whats broadcast in the frequencies between 30,000 & 60,000

any lists out there ?

?

See FCC Spectrum chart URL:
http://www.ntia.doc.gov/osmhome/Chp04Chart.pdf

Since it is a VHF range, generally it is line of sight.
Coupla of services come to mind

1. Amateur band -- 50 to 54 Mhz sometimes Hams experience Sporadic E
propagation for long range skip contacts. But most often it is line of sight
either simplex or repeaters. Modes for Hams are CW, SSB, AM, FM, Data

Channel 2 of the USA TV band is here -- 54- 60 MHz

Since it is a VHF band, can't imagine any "broadcasting" there except
Channel 2 TV
Other services here - cordless phones around 43 to 49 Mhz, Fast food Freq,
For others see URL's:
http://www.fordyce.org/scanning/genfreq.html

http://www.dxing.com/scanfreq.htm

These frequencies are VHF (as opposed to shortwave) and what you're going to hear there usually depends primarily on where you live. I say "usually" because low VHF signals do tend to skip around when conditions are right.

This slice of spectrum will primarily yield two-way communications in the FM mode, rather than broadcasting - the exception being TV channel 2 (54-60 MHz). The territory from 30-60 MHz also includes the six meter ham band (50-54 MHz),

While most folks would probably use a scanner to listen down here, typically scanners operate in FM and maybe AM mode. Hams and others wanting to listen to SSB, CW, and digital signals in the 6m ham band would need a receiver such as the R-75 or a ham transceiver for that.

Also, as I mentioned above, low VHF signals often tend to skip around a lot, and a good communications receiver such as the R-75 can be a better tool for catching low-VHF DX than a typical scanner.

As for frequency lists, this again depends on where you live - you might try RadioReference.com or Google up some other scanner frequency list for wherever you are.

Hope this helps,

There's also a ham band from 50-54 MHz where CW, SSB, and digital
modes are regularly used. Typical consumer-grade scanners, which
operate mainly in FM and maybe AM modes, are pretty much useless for
monitoring those signals. You need either a ham transceiver, or a good
communications receiver such as the R-75, for that.

National and international science academies and professional
societies have assessed the current scientific opinion on climate
change, in particular recent global warming. These assessments have
largely followed or endorsed the IPCC position that "An increasing
body of observations gives a collective picture of a warming world and
other changes in the climate system... There is new and stronger
evidence that most of the warming observed over the last 50 years is

attributable to human activities".[1]

This page documents scientific opinion as given by synthesis reports, scientific bodies of national or international standing, and surveys of opinion among climate scientists. It does not document the views of individual scientists or self-selected lists of individuals such as petitions.

MOST OF THE WARMING OBSERVED OVER THE LAST 50 YEARS IS ATTRIBUTABLE TO HUMAN ACTIVITIES.

I'm glad you know so much better than actual scientists.

There is conclusive evidence.
http://en.wikipedia.org/wiki/Scientific_opinion_on_climate_change

You can choose to ignore what science says, but you cannot claim that
scientific opinion says something other than what it does.
Humans are causing the majority of recent warming. That is the state
of current best scientific knowledge.
This is not opinion. It is documented fact.

And I also recall hearing the California Highway Patrol up in that region as well when the 'skip' is in. I've hooked up my scanner to the 200' W-E wire and had excellent reception. I'm not certain if they use the low band anymore or not, but it was always interesting listening.

Burmese Monks' Leader Speaks From Hiding
2007.10.18
Many people are being killed, imprisoned, tortured, and sent to forced labor camps. I hereby sincerely ask the international community to do something to stop these atrocities.

Monks' leader U Gambira

U Gambira, a leader of the All-Burma Monks' Alliance that spearheaded nationwide protests in Burma in September, became a fugitive following the deadly Sept. 26-27 crackdown on protesters nationwide.

"My situation is not good. I have slept without shelter for two nights. I am not very well now. My security is pretty bad," he said, speaking from an undisclosed location. "Now these fellows are trying to butcher me. Now if you are done talking, as soon as you hang up, I have to move somewhere."

"The important thing for overseas Sanghas [monks] is to carry out the Burmese cause continuously, with unity. At the moment, as you know, we cannot do anything inside Burma. We have been assaulted very badly. A few got away, a few left. I am still trying to get away but I haven't succeeded."

He read the following message to U.N. Spcial Envoy Ibrahim Gambari, U.S. President George Bush, and to the world:

"Mr. Gambari. I wish to say, please do something effective and practical for Burma. Measures such as economic sanctions and arms embargo will take time (years) to achieve a political solution. What is most important is for today, for tomorrow. Please tell Mr. Gambari that I am very grateful for his active participation in Burmese affairs. I have a tremendous respect for him. But please tell him to implement the most effective practical measures in Burma. Please try. Please send U.N. representatives to Burma to carry out various ways and means to get political results now. For today."

"To Buddhists all over the world and activists and supporters of Burmese movement, please help to liberate the Burmese people from this disastrous and wicked system. To the six billion people of the world, to those who are sympathetic to the suffering of the Burmese people, please help us to be free from this evil system. Many people are being killed, imprisoned, tortured, and sent to forced labor camps. I hereby sincerely ask the international community to do something to stop these atrocities. My chances of survival are very slim now. But I have not given up, and I will try my best."

Killings, torture, labor camp
"...I would like to make an appeal to President Bush: Please take pride as a

President who has worked hard for Burma to achieve something before his term expires."

"I might not have very long to live. I, Gambira, speaking by phone with you right now, have a very slim chance of survival. Please try your best to relieve our suffering. It will be worse in future when they [the junta] have laid down their roadmap so they can remain in power forever-it will be a blueprint to oppress us systematically. Once they establish their constitution, the Burmese people will suffer for generation after generation."

Translation by Ko Ko Aung for RFA's Burmese service. Service director: Nancy Shwe.

dxAce...The California Highway Patrol (CHP) is very active between 42 & 43 Mhz, as well as some freqs in the 39 Mhz range, and some in the 46 Mhz range. Also activities in the higher VHF ranges. 154.905 is a great freq as it is the car to portable repeater. If you hear that, you're within 5 miles of a cruiser <g>. Keep the CHP freqs going when I drive on the freeways. Hasn't kept me from getting a ticket one time (oh well....), but it makes for informative and interesting listening while driving. Hope this helps everyone.....Eric

I could never get mine to work well. It seemed to be pretty non-directional.

There's a regen unit that made it even worse, going into self-oscillation chiefly,
that's also floating around.

It ain't Kiwa MW loop quality.

At the bottom of the sunspot cycle, you won't hear much in the way of international broadcasts of anything in this range.

During the summertime you may occasionally hear ham band openings in the low 50 mhz range. I've heard the California Highway Patrol is still around 42 mhz, but that may be rumor; that'd take a pretty big whip antenna. Around 56 mhz and up you'll hear TV stations, channel 2 and up.

Here are a few apparently still in use:

California Highway Patrol
{CHP}
("56" = West Valley Office)
-base teal 42.3600 WPAE678 CTCSS 192.8
-mobile teal 42.7800 WPAE678 CTCSS 192.8

("78" = Newhall Office)
("130" = Castaic Inspection Facility)
-repeater lime-4 39.9200 42.2800 WNFY237 CTCSS 136.5
-base (old) tan 42.4200 WNFY237 CTCSS 192.8
-mobile (old) tan 42.8400 WNFY237 CTCSS 192.8

("98" = Altadena Office)
-base brown 42.5000 KJP457 CTCSS 192.8
-mobile brown 42.8200 KJP457 CTCSS 192.8

Info from : http://www.n6lhv.net/valleyscan.html#federal

A pretty lengthy listing there, for the Greater San Fernando Valley.

That, and a few 'certificates of accomplishment' really add up to some heap big
'credentials' don't they, 'Eduardo'?

Pay attention please. The only scientific body making the incredibly
weak claim is the one at the UN. That body is more political than
scientific.

Now wake up if you are able.

Ace lives in Michigan. Nyah, nyah, nyah, nyah, nyah, nyah.

It's late October. Picture yourself in Michigan instead
of some hellhole like the Bay Area where palm trees
and redwoods grow, and navel oranges fall off the
trees in winter. What a mess!

At least Michiganders get a clear shot to Toledo and
Kenosha and they can do Fargo and Duluth, too.

There is nothing about this that concludes that the current warming trend is due to mankind's activities. Mankind could disappear off the face of the earth tomorrow and the weather or climate would not change.

Besides the fact that man's activities are easily < 2% how do you think it is possible that mankind is causing climate change? You realize there are many natural processes that add and subtract CO2 from the atmosphere that control the gas balance in the atmosphere. At best man can make temporary changes in a small area but that's about it.

Obviously you have no appreciation for the scale of the weather and the climate.

2446. DX-440 Case Mod?

Newsgroup: rec.radio.shortwave
Date: 2007-10-21 18:42:46 UTC
From: ShutterMan <scott.hutter@gmail.com>
Message-ID: <1192992166.284832.132140@i13g2000prf.googlegroups.com>
Source record: 128413

I have an old DX-440, and Im thinking about gutting the electronics and moving them into a tabletop type of custom case unit. I never cared much for the vertical standing type of portables, but the DX440 is a great radio aside. I know that moving things around from one case to another can introduce interference, especially if the leads are longer than before. Does anyone have any thoughts on making such a change? Im particularly concerned with the tuning knob as it will be moved to the front of the base case instead of the side where it currently lives in the stock unit.

Im usually hesitant to perform such surgery on a great radio like this, but I actually have two of these. Thanks for your input.

1) This is not off-topic. The RF-3100 is a shortwave radio.

2) I have an ultra-high quality scan of the complete service manual. I used to have one of these radios, and before I sold it I made a scan of the service manual. Problem is that because it's at such high resolution, it's a 50mb PDF. Way too big to mail. Any ideas?

It a religion now. No stopping it.

I see a big problem that is getting worse. People that do not understand science making outrageous claims get a following.

Witness the retard that was posting here claiming that the towers fell faster than they should have because there was controlled demolition that brought them down. Objects fall at a certain rate determined by the acceleration of gravity. Air friction is the only factor that slows them down. This was figured out in the middle ages. And then the retard doesn't think that the fuel fire in the tower acting as a chimney could not reach temperatures to melt the steel infrastructure so to this they need a conspiracy theory for it to make sense to them.

It looks like a sickness to me, kind of a adult AADD where someone has figured out how to program these hapless individuals.

This stupefied behavior used to be confined to politics and social issues which encompass what people want and statistics which can prove whatever you want but now has reached into science and recent events. Michael Moor, Alex Jones, Al Gore, and other loons lead the way with their improbable and unworkable ideas and still get a following of AADD individuals.

I was listening to Alex Jones the other night on WWCR and I thought he was going to breakdown on the spot. He was just screaming into the mike. Toward the end of the rant it was no words just screaming. Then there was a commercial break and afterward when he was back on he sounded perfectly normal. The guy is a natural actor and knows how to manipulate the audience. He sure had me going for a few minutes.

Priceless entertainment.

Oh yeah, they still use those frequencies. There is a number of
frequencies used in the 40 - 60MHz range every day. You can still see
the long whips on the patrol cars.

Are all the pages a scan? Why not turn the pages that have just text
into text pages with OCR? Images take up more bits than the text. You
can leave the pages with illustrations as a graphic.

Heard the Radio Program "Music Of Your Life"
on 820 kHz in the AM/MW Band.

21 OCT 2007 - Sunday Morning - 7:15~7:30 AM PDT

No AM/MW Radio Station ID and a reference to a this Morning
we are doing a 'simulcast' of the "Music Of Your Life" Program
from a sister FM Radio Station {again no ID} .
.
Good Analog Audio Music Sound Quality for about 15 Minutes.
.
"Music Of Your Life" Radio Program
http://www.musicofyourlife.com/
.
AM/MW 820 kHz Radio Stations - North America
http://www.am-dx.com/lists/820sort.htm
.
Radi-Osophy HD-100 Radio and 70-Foot Triangle Loop Antenna.

I got smoke here from the Piru fire and wild winds blowing it this way.
I've been listing to the fire fighting effort on the scanner.

KORC in Waldport, OR, is listed by BIA (updated Friday afternoon) as Easy / Standards. However, it has no FM sister station... it's a standalone. Salem's KGNW in the Seattle metro has no AM sister, either, and is listed as Christian talk.

d'Eduardo,

Yeah - I when down the entire USA 820 kHz list and could not find a
'match'.

Also look at all the FM Radio Stations listed for "Music Of Your
Life"
and could not find an 'in-market' AM/MW for any of them on 820 kHz.

-but- I heard what I heard; even though I did not hear an ID.

I will have to monitor 820 kHz around 7 AM PDT to see -if-
I can get a second chance to hear and ID. ~ RHF

2470. The Crystal Ship

Newsgroup: rec.radio.shortwave
Date: 2007-10-21 22:21:49 UTC
From: dxAce <dxAce@milestones.com>
Message-ID: <471BD0FD.C3896060@milestones.com>
Source record: 128437

Greetings, all my good shortwave radio friends!

The Crystal Ship is taking to the airwaves presently (2110 UTC)
on 6875 kHz and on 5386 kHz. This program should end before 0000 UTC.
Later tonight, we may also broadcast on two frequencies:
3275 kHz
and either 6899, 6854 or 6875 kHz.

Our primary frequency may be shifting to 6899 kHz from 6875 kHz, when it is
available.

We will NOT be doing Halloween programming tonight, to avoid becoming
absolutely sick of it before... Halloween.

73s and FIGHT for FREE RADIO!

2475. Armenian Genocide: Michael Savage Vs. The Frank Fury

Newsgroup: rec.radio.shortwave
Date: 2007-10-21 23:38:08 UTC
From: NewsGuy <NewsGuy2005@gmail.com>
Message-ID: <1193009888.404433.279020@q3g2000prf.googlegroups.com>
Source record: 128442

Frank sets his sights on talk radio host Michael Savage this week, who manipulated Nancy Pelosi's diplomatic blunder in condemning the Armenian Genocide to further his own agenda. The ever-disingenuous Savage claimed that Ottoman Turks had Sharia Law and committed genocide against the Armenians because they were Christian. After replaying his phone call to the show, Frank sets the record straight in a living history lesson that Bronx Blowhard Savage could never teach because it simply does not fit in with his world view.

Frank challenges Savage to come on The Right Perspective and debate him, with no 10 second delays or piping down of phone calls.

Plus, Solutrea and Race Memory... Harry Reid tries damage control with lame excuses... Rootless Cosmopolitan Bar Rafaeli brags about avoiding service in the Israeli Army... bye-bye to bad rubbish Curtis Sliwa... callers John from Connecticut and Steve from Manhattan verbally spar in Round 3 of an extended debate... your phone calls at 718-761-9996 and much more.

Download the Archive Here:
http://therightperspectivepodcastblog.blogspot.com/2007/10/michael-savage-vs-frank-fury.html#links

The Right Perspective is heard every Friday 10pm EDT over shortwave WWCR 3.215 Mhz and the Internet at www.therightperspective.com

Source record: 128347

DX Report - Heard My 4th AM/MW "HD" Radio Broadcast
http://groups.google.com/group/hd-radio/msg/fffcded5bb2047a5
- - - Today 21 OCT 2007
.
Time : 07:06 AM PDT in Twain Harte, CA -heard- KSL-AM Newsradio
1160 kHz in Salt Lake City, UT - Distance [DX] about 600 Miles
.
Something about a Hannah Montana Concert in Salt Lake City;
and then something about the "Keys To Success" Program
between the Utah Governor's Office and the Ken Garff Auto
Group; dropping back to Analog at 7:08 AM (~2 Minutes).
.
KSL-AM Radio 1160 kHz => http://www.ksl.com/?nid=251 .
Brand : "KSL Newsradio" 1160 AM -and- 102.7 FM .
-Simulcasting- Salt Lake City, Utah -USA-

"KSL Newsradio" Program Line-Up
Mon~Fri - http://www.ksl.com/?sid=122030&nid=312
Sat - http://www.ksl.com/?sid=124407&nid=43
Sun - http://www.ksl.com/?sid=124433&nid=43
.
Radio Shows on KSL Newsradio 1160 kHz
http://www.ksl.com/?nid=311
.
Radio Station : KSL-AM 1160 kHz @ 50,000 Watts
http://www.radio-locator.com/cgi-bin/info?call=KSL&service=AM
both Day and Night from Salt Lake City, Utah.
http://en.wikipedia.org/wiki/KSL_Newsradio
.
Therefore the IBOC -ERP- Digital Signal
at 1% would be ~500 Watts.
http://www.fcc.gov/fcc-bin/amq?list=0&facid=6375
.
KSL-AM 1160 kHz uses One (1) Half Wave Tower ~193*EH
http://maps.google.com/maps?f=q&hl=en&q=40.77944,+-112.09889+(KSL-AM)&om=1
Note - The KSL-AM 1160 kHz Transmitter & Tower are
located about 6-Miles West of Salt Lake City, Utah;
and North of Highway 80; near the Great Salt Lake.
.
Predicted Daytime Coverage Area for KSL-AM 1160 kHz,
Salt Lake City, UT.
http://www.radio-locator.com/cgi-bin/pat?call=KSL&service=AM&status=L&hours=U
.

KSL-AM "Newsradio" 1160 kHz - Audio Sound Notes :
http://en.wikipedia.org/wiki/KCBS_(AM)
* Analog Male and Female Voices sounded OK {Natural}
* Digital Male and Female Voices also sounded very Natual
Yes the Digital Voice Quality and Tone were OK.
IMHO - KSL-AM got the IBOC Signals {Audio Quality}
for both the Analog and the Digital : 'R-I-G-H-T" !
.
HD Radio - Radi-Osophy HD-100 Radio
http://www.radiosophy.com/products/hd100.html
.
AM/MW Antenna - Triangle Loop Antenna with a 20-Foot
Base and two 25-Foot Sides pointed toward* Manteca, CA
{SF Bay Area} : With the back-end pointed at "You Got It"
Salt Lake City :o)
* Making Hawaii to the Far West -and- Iceland to the Far East.
.
.

I can't offer you any advice but I would sure like to see what you come
up with. Please keep this group informed on the progress of your
project. I bought my DX-440 years ago at full retail price and I have
never regretted that purchase. It's a great radio!

Greg

*** Welcome to rec.radio.info! ***

Welcome to rec.radio.info, a group that aims to provide a noise-free
source of information and news for the entire rec.radio hierarchy.

Two introductory articles about rec.radio.info are posted to the group
every month. You are now reading the first article, which explains what
rec.radio.info is, and answers some Frequently Asked Questions. The
second article is titled Posting Guidelines, and you only need to read
it if you want to submit an article to rec.radio.info.

You can skip to the next section of this article by searching for the
next
" -- " string. The sections available are:
- What is the purpose of rec.radio.info?
- Why are messages almost always cross posted to rec.radio.info?
- What is a 'follow-up', and what does 'moderated' mean?
- OK, so now I know what 'moderated' means. Tell me more.
- What type of material is considered inappropriate?
- I do not have access to news, how can I get the information posted to
rec.radio.info?
- Will the material appearing in rec.radio.info be archived somewhere?
- I have a regular posting with timely information, is there a way to
speed up it's delivery, or automate for more convenience?

-- What is the purpose of rec.radio.info?

The purpose or charter of rec.radio.info is to provide the Usenet
community with a resource for information, news, and facts about any and
all things radio.

All the other rec.radio groups are intended for discussions and general
chit chat about radio. Rec.radio.info will contain informational,
factual articles only. Follow-ups are redirected to an appropriate other
group, and further discussion (if any) will not take place in
rec.radio.info.
```

In order to ensure that rec.radio.info contains only appropriate articles, it was decided to create the group as a moderated newsgroup.

-- Why are messages almost always cross posted to rec.radio.info?

It provides a "tag" for each article to be assembled into a filtered presentation in rec.radio.info (even with cross-posting, only one message, with a unique Message-ID, is propagated across the net). This tag also facilitates a pre-existing method of dropping or canceling the articles locally within the discussion groups if you don't want to see them. This accommodates individuals who want to separate the bulletins from the discussions, discussions from the bulletins, as well as those who are adamant about not reading another newsgroup and wanted to see everything all in one basket.

With the total size of Usenet (in number of newsgroups and total traffic) doubling every year or so, this is no insignificant contribution to reducing information noise and chaos. Making the discussion groups a catch-all, and making extra newsgroups filters on that catch-all, is also the most realistic way to implement such a scheme (It's not intuitively obvious what the charter, contents, and general appropriate topics for each and every newsgroup are. Seeing FAQ's and charter/intro postings in the home newsgroup is beneficial for new readers).

By cross-posting one only is adding a few tens of bytes to each bulletin (to specify the extra group on the Newsgroups line), but are adding the capability for very powerful filtering features available on most news servers, listservers and readers. Your local news guru could probably explain these features in more detail.

In rn, for example, according to Leanne Phillips in her rn kill-file FAQ, add a line of the form:

/Newsgroups:.*[,]rec\.radio\.info/h:j

either in ~/News/KILL (if you don't want to see rec.radio.info articles anywhere) or ~/News/rec/radio/amateur/misc/KILL (if you don't want to see them just in rec.radio.amateur.misc). The latter method means your kill file will only be consulted during rec.radio.amateur.misc (and hence runs more efficiently), and will probably work for most people.

In nn, according to Bill Wohler in his nn FAQ, add a line of the form:

rec.radio.info:!s/:^

in ~/.nn/kill (if you don't want to see rec.radio.info articles anywhere), or put the following lines:

sequence
rec.radio.info
rec.radio.

at the end of ~/.nn/init in order to see all the rec.radio.info bulletins first, then read the remaining rec.radio.* without the

bulletins.

More information about kill files may be obtained from Dave Fawthrop's Killfile FAQ at:

http://www.hyphenologist.co.uk/killfile/

-- What is a 'follow-up', and what does 'moderated' mean?

If you are new to Usenet and are not familiar with the terminology, you might want to read the general introductory articles found in the newsgroup news.announce.newusers. Doing so will make your life on the net much easier, and will probably save you from making silly beginner's mistakes.

If you think that at this moment you are reading an echo, a conference, or a bulletin board, I'd also strongly suggest a trip over to news.announce.newusers.

For the rest of this article, we will assume you have a basic knowledge of Usenet terminology and mechanics.

A moderated group means that any article that needs to be posted to the group has to be accepted by the moderator of the group. Since we need to ensure that followups to an article (discussion) do not show up in the rec.radio.info newsgroup, the `Followup-To:' header line contains a newsgroup that is appropriate for discussions about the specific article.

-- OK, so now I know what 'moderated' means. Tell me more.

Rec.radio.info is a moderated newsgroup, which means that all articles submitted to the group will have to be approved by the moderator first.

The current moderator of the group is the rec.radio.amateur.moderated Moderation Team. Submissions to rec.radio.info can be posted, or e-mailed to:

rec-radio-info@panix.com

Comments, criticisms, suggestions or questions about the group can be e-mailed to:

rec-radio-info-request@panix.com

But before you do so, please be sure to check out the "Posting Guidelines" article.

The influence of the moderator should be minimal and of an administrative nature, consisting chiefly of weeding out obviously inappropriate articles, while making sure correct headers etc. are used for the appropriate ones.

-- What type of material is considered inappropriate?

There are three broad categories of articles which will be rejected by the moderator:

1) Requests for information: rec.radio.info is strictly a one-way street. We receive information in our mailbox; we then post it to rec.radio.info. Requests for specific information belong in the normal discussion newsgroups. If your request gets answered, you might consider passing the answer on to rec.radio.info, though. Especially if you can edit it into a informational, rather than a discussion, format.

2) Obvious discussion articles, or articles that appear unsubstantiated.

3) Commercial stuff: a relatively unbiased test of a radio product would be accepted, but any hint of for-profit might be reason for rejection. For three reasons: This is not the purpose of the list, for-profit is a controversial topic, and this list may be passed onto Amateur Packet Radio (where for-profit is prohibited except under certain provisos).

rec.radio.swap may be more deserving of the posting in any matter.

Similarly, copyrighted material generally cannot be used. If it's TRULY worthwhile to the net, We would recommend obtaining permission from the copyright holder. Please note the source, and if permission was given. We reserve the right to make the final decision concerning appropriateness in all situations. In most cases, a brief summary of, or pointer to, the copyrighted information may be all we can allow.

-- I do not have access to news, how can I get the information posted to rec.radio.info?

Google has an excellent web interface to Usenet newsgroups. It is available at:

http://groups.google.com

It supports both reading and posting.

Another excellent web interface to at least the radio-related Usenet |
newsgroups is the RadioBanter site: |

http://www.radiobanter.com |

sponsored by the NewsgroupBanter project: |

http://www.newsgroupbanter.com |

It, too, supports both reading and posting. |

-- Will the material appearing in rec.radio.info be archived somewhere? |

Yes. See Google Groups and RadioBanter above. |

Effectively this means that anything you post to rec.radio.info will be permanently stored, so your work will not be lost.

-- I have a regular posting with timely information, is there a way to speed up it's delivery, or automate for more convenience?

Yes, there is! It may take a bit of chatter with the moderator, but we are willing to take responsible people and provide them the means of posting the articles directly from their site. We will try everything we can as we fully realize that DX (distant signal) and astronomical data can be somewhat transitory. We are also willing to allow regular posters of information the same courtesy, even if the information is not as time critical.

We refer to this as self-moderation, which is partly based on the model for rec.answers/news.answers. This requires co-operation and goodwill to be beneficial to the community in the rec.radio hierarchy.

Please direct any comments, questions, or criticisms about this article to rec-radio-info-request@panix.com.

Changes followed by "|".

*** rec.radio.info - Posting Guidelines and Etiquette ***

Two introductory articles about rec.radio.info are posted to this group
and to rec.answers/news.answers every month. You are now reading the
second article, which explains how to submit something to
rec.radio.info, and which answers some Frequently Asked Questions about
the submission process. The first article is titled "Welcome to
rec.radio.info", and it might be a good idea to check it out as well.

-- How do I submit something to rec.radio.info?

Two possibilities. You can use your newsreading software to just post
the article to rec.radio.info, as you would do with any other
newsgroup. The difference is that the software recognizes the special
status of rec.radio.info as a moderated group, and will e-mail your
article to us, the moderation team, instead of posting it to the group.

Alternatively, you can mail your article directly to us at the following
address:

rec-radio-info@panix.com

Mailing us directly is probably (a wee bit) faster, but using the
transparency offered by the newsreading software is probably more
convenient.

If you have any questions, or wish to deal with some administrivia with
the moderation team, we suggest mailing to the following address:

rec-radio-info-request@panix.com

-- How soon will I see my article appear?

It depends on how busy we are. Your article reaches us as mail, we have
to read it first, give it the stamp of approval, and finally send it on
to the group. We will attempt to read and decide on all submissions
within 72 hours at the very least, though we will probably be able to
process submissions much faster in actual practice.
```

The site from which we moderate this newsgroup, "Public Access Internet and Unix, NYC" (Panix), is directly connected to the Internet, and articles posted at that site should appear at most major news sites, including Google Groups, the same day. The principal delay, therefore, will be the wait in the moderator's submission queue.

If you post a periodic article, and have shown to be trustworthy, we may allow you to post directly if the article is of a timely nature. See the section below on direct posting.

-- Should my article be in a specific format?

No. If it is not totally illegible, we will accept it, and if it does not have a correct subject-line we will correct it with your permission -- that's what a moderator is for.

However.

You could do us a big favor by making sure your article conforms to these simple requirements:

1) The article must present information, not discussion or requests, We will reject the article or require you to change the wording if it is worth it.
2) A good, descriptive Subject line.
3) Always mention what source you got the information from.
4) Don't forget to include a Followup-To header, at least if you don't want further discussion to automatically be forwarded to you, the poster, which is the default if the article is only posted to rec.radio.info.

As we said: if your article is appropriate we will post it even if you don't follow these guidelines, but then don't blame us for not processing it immediately. 'Perfect' articles we can send on with a couple of keystrokes. Stuff that needs minor editing is going to have to wait until we have time to do so.

Please do not waste both our and your time by posting requests, as this is an information only news group.

-- What about crossposting?

If you send something to rec.radio.info, just name any group you'd like to cross-post to in the Newsgroups field. Then, when we approve the article for rec.radio.info it will get automatically cross-posted to any other groups mentioned. This will also override the default Followup-To: poster, replacing it with the groups you cross posted to.

We would prefer if the group be cross-posted to the various discussion groups in the rec.radio.* hierarchy that are appropriate:

rec.radio.amateur.misc Amateur (ham) radio and related matters
rec.radio.amateur.packet Amateur Packet Radio discussions
rec.radio.amateur.policy Amateur Radio practices, rules, etc.
rec.radio.noncomm Non commercial radio discussions

rec.radio.shortwave International broadcasting on the 'HF' bands
rec.radio.cb Citizens Band (27 MHz) discussion
rec.radio.scanner Scanner discussions (unsupported group)

or in one of the moderated groups:

rec.radio.amateur.moderated Amateur radio practices, rules, etc.
rec.radio.broadcasting Discussion of *domestic* radio broadcasting

We will leave it up to the poster to decide which group(s) are appropriate, but reserve the right to add groups if we feel it has broader interest. We will consult with the poster first.

Notes on crossposting:

- rec.radio.broadcasting is also a moderated group. The rec.radio.broadcasting moderator prefers to review all articles himself before posting. Placing rec.radio.broadcasting before rec.radio.info on the Newsgroups line should accomplish this. We will typically abide by the rec.radio.broadcasting moderator's decision whether the article is appropriate for rec.radio.info.

- rec.radio.amateur.moderated is also a moderated group. As the rec.radio.amateur.moderated Moderation Team manages both rec.radio.amateur.moderated and rec.radio.info, we can manage crossposting and approvals for both newsgroups. The rec.radio.amateur.moderated group does not allow crossposting to other discussion newsgroups, whether moderated or unmoderated. However, we would like to manage rec.radio.info as consistently as possible with how it was done by previous moderators, including the grandfathering of existing regular postings. Therefore, the submitter can choose rec.radio.amateur.moderated or the other unmoderated rec.radio.amateur.* discussion newsgroups for crossposting, but not both.

- Any FAQ or informational posting approved by the rec.answers/news.answers moderation team that is also crossposted to any rec.radio.* newsgroup (besides just rec.radio.info) is also automatically pre-approved for rec.radio.info. See below for more information.

If you post to another moderated group, it may be better to make special arrangements with both moderators before posting by contacting us at our administrivia addresses.

In addition, cross-posts do not take up extra space; modern newsreaders can be configured to show you cross-posted articles only once anyway; not everybody reads rec.radio.info; and rec.radio.info was never meant to reduce the volume of the regular discussion newsgroups. But keep in mind that some of the mail gateways may filter out the informational postings (at request of the subscribers) to keep the load down.

You decide.

-- I have a regular posting with timely information, can I make arrangements to help speed up delivery by posting directly from my site?

Yes, there is! It may take a bit of chatter with the moderator, but we are willing to take responsible people and provide them the means of posting the articles directly from their site. We will try everything we can as we fully realize that DX (distant signal) and astronomical data can be somewhat transitory. We are also willing to allow regular posters of information the same courtesy, even if the information is not as timely.

We refer to this as self-moderation, which is partly based on the model for rec.answers/news.answers. This requires cooperation and good will to be beneficial to the community in the rec.radio.* hierarchy.

If you are currently maintaining (or plan to maintain) a radio-related periodic information posting, you may wish to consider crossposting it to rec.answers/news.answers. Postings that are approved by the rec.answers/news.answers moderators for this treatment are automatically pre-approved for crossposting to rec.radio.info (as the news.answers requirements are far more rigorous than the requirements this newsgroup ever plans to use). For more information about this option, consult the appropriate information articles and posting guidelines in rec.answers/news.answers.

Realize also, that even if your post is not approved for rec.answers/news.answers, it can still be approved for rec.radio.info. The intention is not so much to get every last bit of radio-related information on rec.answers/news.answers, but rather to provide an alternative avenue of approval (as well as grandfather existing maintainers of radio-related information and spare them additional bureaucratic hurdles). Again, crossposting to either rec.radio.info or rec.answers/news.answers, both, or neither, is at the discretion of the poster (subject to the approval of the moderators). You decide what is most appropriate for your article.

Please remember that as an information maintainer, you are not alone. There are many others on the net who maintain and post periodic information postings, using various intermediate-to-advanced features of Usenet (usually via automated tools). Various degrees of technical support and general hand-holding are available from many Usenet veterans. Send us some E-mail describing your needs to our administrative address below, and we'll try to help, or at least refer you to the right knowledgeable individual(s).

-- And Follow-ups?

If the only newsgroup you have specified is rec.radio.info, then the Followup-To: field will always be set to poster. If you do not want this, you must supply a Followup-To line of your own, and we will honor that one, as long as it is a subset of the original Newsgroups line.

If you specify newsgroups to cross-post to, then the Followup-To field will be set to include all the cross-posted groups, excepting rec.radio.info itself. Again, if you do not wish this behavior, supply your own Followup-To line.

We maintain other standards on the various RFC-1036 (news transport) header lines. For example, if the article is appropriate for passing into the Packet Radio Information Network, we encapsulate the Packet Bulletin Identifier (BID) in the Message-ID: news header line indicating the machine of origin as the ampr.org domain:

Message-ID: <$opa.55.1994@ampr.org> |

where the Packet Radio BID, in this example, is `$OPA.55', and it was posted in the year 1994, because some of the Bid numbers are cycled yearly. Hopefully, this can be used as a key to re-introduce the articles for the Packet Radio network. Also, if the article is a repost of an already existing information article in the rec.radio heirarchy, we ensure that the References: header line is linked to that previously posted article. This also helps to tag articles, and may be used for additional filtering if needed.

Since the articles are archived, please use the Summary and Keywords header lines to help one search for your article.

-- Why have I received no reply from you?

We never reject anything in silence, and we make a point of it to answer all our mail. However, E-mail, like a brain cell, can and does get lost, every now and again.

So, if you send us something, and you don't see it appear it rec.radio.info, and you still have not heard from us in reply after say, five days, you can be pretty sure that either your mail never reached us, or that our answer has never reached you. In that case, please try again (We will filter out duplicates).

Please direct any comments, questions, or criticisms about this article to rec-radio-info-request@panix.com.

I saw this post and decided to give a listen myself since I would be driving home from work around 11:30pm. Saturday night, I caught an ID at the bottom of the hour then went into Coast to Coast AM. Not a bad catch on the car radio while driving along the suburbs of Las Vegas, NV.

And the AAAS. Are they political as well?

"The scientific evidence is clear: global climate
change caused by human activities
is occurring now, and it is a growing
threat to society. Accumulating data from
across the globe reveal a wide array of
effects: rapidly melting glaciers, destabilization
of major ice sheets, increases in
extreme weather, rising sea level, shifts
in species ranges, and more. The pace of
change and the evidence of harm have
increased markedly over the last five
years. The time to control greenhouse
gas emissions is now.
The atmospheric concentration of
carbon dioxide, a critical greenhouse
gas, is higher than it has been for at
least 650,000 years. The average temperature
of the Earth is heading for
levels not experienced for millions of
years. Scientific predictions of the
impacts of increasing atmospheric concentrations
of greenhouse gases from
fossil fuels and deforestation match
observed changes. As expected, intensification
of droughts, heat waves, floods,
wildfires, and severe storms is occurring,
with a mounting toll on vulnerable
ecosystems and societies. These events
are early warning signs of even more
devastating damage to come, some of
which will be irreversible.
Delaying action to address climate
change will increase the environmental
and societal consequences as well as

the costs. The longer we wait to tackle
climate change, the harder and more
expensive the task will be.
History provides many examples of
society confronting grave threats by
mobilizing knowledge and promoting
innovation. We need an aggressive
research, development and deployment
effort to transform the existing and
future energy systems of the world away
from technologies that emit greenhouse
gases. Developing clean energy technologies
will provide economic opportunities
and ensure future energy
supplies.
In addition to rapidly reducing greenhouse
gas emissions, it is essential that
we develop strategies to adapt to
ongoing changes and make communities
more resilient to future changes.
The growing torrent of information presents
a clear message: we are already
experiencing global climate change. It is
time to muster the political will for concerted
action. Stronger leadership at all
levels is needed. The time is now. We
must rise to the challenge. We owe this
to future generations."

I couldn't find anything on California power cutbacks - do you have a
link to that message?

Since we are all more-or-less interconnected via a power grid don't be
deluded by the number of power plants that you can see. It's actually
a good idea to conserve energy whether asked to do so or not.

Lemme see, lemme saw, lemme seen here how many lights I have turned on.OK, in my bathroom in the light fixture above the medicine cabinet, (the cabinet with the old mirror door on it) I have two flourascent lights, I never turn them off.In my kitchen, I have one flourascent light, I never turn that one off either.In the floor lamp by the side of my side of doggy's couch in my living room, I have one G.E.incandesant 60 watt Reveal light bulb turned on.I turn that one off when I go to bed or out shopping, otherwise I keep it turned on, untill it burns out and then I call up three blonde women to replace that light bulb for me.

I also have two tv sets turned on, one for my Philips 976 WebTV box,another tv set for watching old, old, old movies on DirecTV (Maid's Night Out movie is on the TCM channel now, that's a right good old 1938 movie) and I have my Velocity Micro desktop ProMagix computer turned on and an electric water and electric stove and one electric fan turned on on an end table by doggy's side of her couch.Call the goobernator of California, I am wasteing too much electricity!

Today between 7:15 and 8:20 AM PDT this same AM Radio
Station played Easy Listening Pop Religious Music and ID'ed
itself as "FM100 Soft Sunday Sounds AM 820" many times.

Note - NO Top-of-the-Hour Call Letters or City of License
at 8 AM just "FM100 Soft Sunday Sounds AM 820".

Followed by ABC News until 8:04 AM and then more
Easy Listening Pop Religious Music and the "FM100
Soft Sunday Sounds AM 820" ID.

So inspite of NO Call Letters or City of License it must
be : "KUTR" - 820 kHz from Taylorsville, UT at 50 KW
KUTR 820 AM => http://www.utaham820.com/
Which bills itself as [kutr] AM 820 Soft Sunday Sounds
on it's website.

FWIW - KUTR AM 820 kHz also had a Blinking Blue Light
all the time; indicating that they are Broadcasting in IBOC
"HD" Radio. {No Digital Signal Lock} - - - About ~ 600 Miles.

Predicted Daytime Coverage Area for KUTR 820 AM, Taylorsville, UT
http://www.radio-locator.com/cgi-bin/pat?call=KUTR&service=AM&status=L&hours=D

Question : Doesn't the FCC still require that All Radio
Stations give their Call Letters or City of License at the
Top-of-the-Hour ?

ABOUT - "Soft Sunday Sounds"
http://www.fm100.com/?nid=11&sid=15294
LISTEN LIVE => http://utaham820.com/kutr.ram

Note - "Listening Live" via the Internet 'confirms' KUTR
AM 820 kHz is what I heard on the Radio as "FM 100
Soft Sunday Sounds AM 820".

FWIW - Evidently the "FM100" comes from the Bonneville
International Corporation of Utah -dba- 'KSFI FM100'.
http://utaham820.com/terms.php

"IBOC TECHNOLOGY: An Assessment of Technical & Operational Issues in the Canadian FM Radio Environment" 24 May 2007

"Based on the evidence currently in hand, the DRCG considers that it would be risky for Canadian broadcasters to proceed at this time with an unrestricted roll-out of HD Radio services in the FM band, in the manner implemented in the US. There is no ground-swell of radio listener interest in this technology so far and the lack of inexpensive receivers, as well as unique new programming services, continues to make it difficult to market HD Radio to the public in the US. Moreover, there is no evidence that Canadian digital radio listeners are being lost to the 10% of US FM stations that have implemented HD Radio to date."

http://www.cab-acr.ca/english/radio/dab/DRCG_Report_final.pdf

Ha! Ha! Eduardo! Word's getting around, and the other countries testing IBOC will surely follow!

2514. We got noticed!

"Growing Resistance to HD Radio"

After feeling like I've been shouting into the wind alone for so long about this, it's great to see others taking a critical perspective on HD's fundamental flaws. Check the following blogs for lots of information about this tainted technology, especially since these folks are also doing an excellent job aggregating news coverage of the issue:

Is HD Radio a Farce? - A good collection of information on what's happening both within the radio industry and among consumers, who, by and large, seem to be holding their noses once they get a whiff of those "secret stations between frequencies."

HD Radio on the Medium Wave (AM) Band - An excellent, if somewhat disorganized, collection of coverage about the increasing problems with AM-HD interference.

Stop IBOC Now! - A coalition of broadcast engineers who are opposed to the deployment of a "new and improved" technology which may, in effect, destroy at least one of the broadcast bands. There's been rumblings of dissatisfaction within the broadcast industry for a long time now about the prospects of HD Radio, but this is the first quasi-organized campaign of people who intimately understand the technology and are well-aware of its shortfalls.

In related news, the "HD Radio Alliance" has committed to spending another $230 million to market the technology to the public. This brings the running-total of marketing expenditure for HD to $680 million. Note that this is not a direct cash outlay - the Alliance (some of whom have already turned off their digital transmitters) is counting airtime that they'll use to play pro-HD spots as part of their expenditures.

Meanwhile, in Canada, the Digital Radio Co-ordinating group, a large part of which includes the Canadian Broadcasting Corporation, has issued a report recommending that Canadian stations not adopt the FM-HD protocol. (Many Canadian stations have already gone digital with an alternate system). According to the DRCG,

Based on the evidence currently in hand, the DRCG considers that it would be risky for Canadian broadcasters to proceed at this time with an unrestricted roll-out of HD Radio services in the FM band, in the manner implemented in the US. There is no ground-swell of radio listener interest in this technology so far and the lack of inexpensive receivers, as well as unique new programming services,

continues to make it difficult to market HD Radio to the public in the US.

The report also takes special note of iBiquity's proprietary control over the HD standard: "iBiquity remains a 'gate-keeper' with respect to who may produce products bearing the 'HD Radio' label, as well as with respect to any future enhancements to the system. Time will tell whether this departure from the norm with respect to broadcasting standards will make it more complicated for regulators in different countries to adopt HD Radio as a digital standard, voluntary or otherwise."

Anyone have a copy of the magazine article (73?) that is purported to have modifications for the Heathkit HR-10B ham band receiver? While in Boston, I picked up one of these little green guys at the MIT monthly ham flea market this weekend and before I go through the radio, I'd like to get my ducks in a row, modification-wise.
thanks
Bob

"DAB is a Mess"

"I only have one DAB receiver in my house and I used to listen to JazzFM and Chill in the main. Now JazzFM has disappeared and all sorts of weird stations are showing after a rescan, including some which are not even broadcasting. There are two things which totally put me off DAB. (1) lack of synch with other radios around the house and (2) lack of stability regarding broadcast channels. No wonder people are put off Freeview and DAB if they keep having to rescan and can't rely on stations being there from one month to the next."

IBOC Crock,

Because of the 'limited' number of AM/MW and FM Radio Stations
in Canada : Implemention of IBOC "HD" Radio within Canada itself
is not a Technical Problem; as it is not a Technical Problem in the
Rest-of-the-World. It is only in the USA where there are an over
abundance of both AM/MW and FM Radio Stations that IBOC is a
significant Technical Problem and then the main problem is AM/MW
Nightime Interference due to Medium Wave propagation.

IBOC 'fits' the FM Band Plan.

IBOC does not 'fit' the current AM/MW Band Plan.

i b oc'd ~ RHF
.
With Four (4) Exceptions - I Ask Myself : What IBOC ?
All I See Is The Blinking Blue Light !
In That Distant Land* Where IBOC Fears To Go :
Life Exists and Radio Listeners Live Beyond the 10mv/m Contour.

IBOC is dead on both bands, if not from lack of consumer interest,
poor reception, and bland, repetitive, non-compelling programming.

I agree, I've had quite a few suprises turn up while bandscanning with
the DX-160, though it would drift away after a little bit. Not a bad
radio as people think, though.

BTW, "Unrevealed Source," I need to ask you a question about another
radio you posted about, could you please send me an email. I tried to
send you one but it never went through.

All of Latin America has higher power, closer packed AM and FM than the US,
and, on FM, places as varied as Indonesia and some of the African nations
like Ghana, have huge numbers of independent FMs.

Doesn't mean they willll eventually use it - I heard tha Mexico is
positioning to jam the US back. Either way, no one, just like in the
US, is going to buy new HD radios.

- All of Latin America has higher power, closer packed AM and FM
- than the US, and, on FM, places as varied as Indonesia and some
- of the African nations like Ghana, have huge numbers of independent
- FMs.

d'Eduardo,

Most 'countries' around the World have Government Controlled
{Limited} Media : Which Translates to Fewer Radio Stations per
10-K Square Miles then the USA.

Yes these Government Controlled Radio Stations are Higher
Powered then in the USA.

Plus the AM/MW 9 kHz Band Plan does make things more
compact then the USA's 10 kHz Band Plan.

I 'predict' that China (PRC) will be going to IBOC Broadcasting
on both AM/MW and FM Radio. Much lower Cost for Media
Expansion to 'serve' the Masses -vice- building all new Radio
Station's Transmitters and Towers. Followed by India etc . . .

IMHO - The 'future' of USA Terrestrial Based "Free" Over-the-Air
Radio Broadcasting is in an Expanded FM Radio Band. This can
be done by 'converting' the old Analog TV Channel 5 & 6 Frequency
Range 76~88 Mhz to the IBOC Digital Broadcasting and transfering
the majority of 'local' AM/MW Radio Stations to the FM Band.

it's a 'vision' thing ~ RHF

Rede Globo in Brazil is installing dozens of stations, as is the
Chateaubriand Group, both AM and FM. Mexican border stations are already on.

That is not true. In this Hemisphere, there is no nation save Cuba where the government controls media. In most nations, for every government station, there are 100 non-government ones.

Ecuador has nearly 200 AMs still on the air, and over 600 FMs, and only two or three are government owned... every other nation is pretty much like that.

> Yes these Government Controlled Radio Stations are Higher

Not by much. And that plan does not apply in The Americas.

Not at all. since in car listening is only about 30% of all radio listening,
and nearly all satellite installs are in cars. the effect is minimal. In
fact, several recognized research companies have shown satellite users are
also above average consumers of terrestrial radio, also. In 7 years, we have
only gotten to 14 million installs, a significant percentage of which do not
renew (after getting it free for a year in a car, for example), compared to
estimates of 700 million or more AM FM receivers. Remember, every in car
satellite radio has an AM FM radio, too.

Passport 2008 Arrives, Books shipped
Monday, October 22nd, 2007 | Comments(0)

In Pamplona, Spain, they have the annual running of the bulls. In Penn's Park each year we have the running of the books.

A shiny 18-wheeler arrived from the printer this morning loaded with Passport 2008 books, which were immediately processed and shipped by Priority Mail today for all corners of the world. Orders from now on are being turned around as soon as they are received, so the website has been updated to reflect this.
We're Back!

Maybe some of us will have them by the end of the week!

Nope. All but about a dozen stations are privately owned commercial
operations. I don't see the Cisneros family being "government."

Scientific opinion = what the available facts and evidence indicates
after the application of REASON.

What, in the absence of absolute proof, would you use to establish
what's true? Reading tea leaves? Using divining rods?
Praying to the Pink Sky Unicorn?

Sorry, but when the majority of scientists make a statement based on
evidence and reason, it's by far the most likely to be true.

Scientific "opinion" is the closest to fact. I don't know what you're
using, but it's inferior.

I'm no fan of closed borders or fences... but you're dead wrong on this one.
The Mexican government prints survival pamphlets for border crossers, and
supplies them with food, water, and other supplies to help them get across
safely. If that is not a form of authorization, then grass is purple and
the sky is green...

'Eduardo' knows that, but is unwilling to admit that publicly. One must remember
that in 'Eduardo's' world each one of those illegals is a potential listener to

the radio stations he 'programs' and therefore a a possible future source of revenue.

2619. help with RF amplifier concept please

Newsgroup: rec.radio.shortwave
Date: 2007-10-24 10:20:29 UTC
From: zdnet1111@rediffmail.com
Message-ID: <1193221229.635669.303430@v29g2000prd.googlegroups.com>
Source record: 128489

Hi,

I am looking for some help in understanding amplifier concepts (solid state only) and product specifications. I have searched for definitions and essays on the topic, but , having no electronics exposure, I find it hard to understand the concepts clearly. So if someone can please help:

1. What actually is amplification of a RF signal: is it the scaling up
of the amplitude?

I want to amplify a signal where the output has very low distortion and noise. It should be as close to the input signal as possible:

2. Does push-pull setup mean that it's a class AB amplifier in which
two amplifiers amplify the same signal, but the opposite two halves of
the input signal?

If this is true, in an amplifier like this:
http://www.communication-concepts.com/ar347.htm

If two solid state amplifiers are rated at 600W each, and it's a push-
pull arrangement, how come the output of this amplifier is 1000 watts (or 1.2 kw theoretically)
If one Motorola amplifier is amplifying half the signal, the other amplifying the other half, wouldn't the total output be 600W for the whole signal?

3. In class AB amplifiers, is the output signal an exact replica (but
amplified) version of the input signal?

4. What is an octave when dealing with amplifiers?

5. Is this communication concepts HF 1000 watt amplifier a class A,
class AB, or class C amplifier?
http://www.communication-concepts.com/ar347.htm

6. Does anyone know the detailed specs for this same communication-
concepts 1000 watt HF amplifier?
Specs like:

a. Duty cycle
b. Phase stability
c. Phase change with power
d. Gain flatness
e. Pulse droop
f. Harmonics
g. Spurious
h. Rise/fall times
i. VSWR or load SWR
j. Gate delay

7 Can this amplifier be "controlled" to give graded amplification
less
than 1000 watts specified, or will it work only at this maximum
level?

Any help is appreciated.

Thanks

Vijay

2620. Internet Radio - soon to a WiFi, WiMax, or cell phone enabled device near you, Eduardo!

"Satellite Radio Is Radio"

"Niche formats -- the ones you'd think attract subscribers who'd be happy to pay for satellite channels -- do poorly. Sometimes very poorly. Sirius Underground Garage has about 45,000 cume listeners. XM's Fungus has 44,000. It might be better to turn the electricity off and save some money. But...the long tail theory applies to satellite radio as it does to popular music. All those little "low rated" channels make up what's called the satellite radio audience... Can you see why radio is on the decline, NPR is defying the delivery system it is on and satellite radio can't seem to get revved up... Forget HD, bickering between terrestrial radio and satellite radio, Wall Street investors and the like (Am I alright? Did I really say forget Wall Street?)."

Ha! Ha! Eduardo! HD Radio's niche formats will fail!

Dear Friends,

Here are the changes of All India Radio for B-2007:

9585 Delhi Khampur (ex 10330) 1615-1715 Russian

11620 Delhi Khampur (ex Bengaluru) 1330-1500 English

11735 Bengaluru (ex Aligarh) 0215-0300 Pushtu,
0300-0345 Dari

13710 Bengaluru (ex 13695) 1000-1100 English,
1115-1215 Tamil, 1215-1245 Telegu

15235 Bengaluru (ex 15410) 1000-1100 English

15235 Panaji (ex 15410)1115-1200 Thai

The B-07 AIR complete SW schedule is available at:

http://www.qsl.net/vu2jos/sw/freq.htm

I'd suggest using a file hosting service. Ie. upload the file to eg.
www.zshare.net/ and then post the link (preferably here).
Then anyone interested has a chance to download the manual.

Does it have any interesting NEW reviews? If it does, then I'll buy
it. Otherwise I'll stick to Monitoring Times.

2631. Re: help with RF amplifier concept please

Source record: 128556

zdnet1...@rediffmail.com wrote:

> I am looking for some help in understanding amplifier concepts...

Tell us what you're trying to amplify. What type of signal? AM? FM?
SSB? Other?

What frequency?

Since you mention 600 watts, this is obviously for a transmitted
signal.

AM and SSB signals require a "linear" amplifier (usually Class AB) so
that the amplitude variations aren't distorted.

FM signals can use a more efficient Class C amplifier since amplitude
variations are of no concern.

> 4. What is an octave when dealing with amplifiers?

An octave is a 2:1 frequency ratio (just like in music). 20 MHz is an
octave above 10 MHz.

>
> 5. Is this communication concepts HF 1000 watt amplifier a class
> A, class AB, or class C amplifier?http://www.communication
concepts.com/ar347.htm

Probably Class AB. Definitely not Class C, as they mention linearity
to 800 watts.

>
> 7 Can this amplifier be "controlled" to give graded amplification less
> than 1000 watts specified, or will it work only at this maximum
> level?

You can vary the output by controlling how much signal you feed into
the amp. You could put a variable attenuator between whatever RF
driver you're using and the amplifier. According to the specs, 10
watts input will give 1000 watts output. Therefore, 5 watts input
would give about 500 watts output.

Shielding the wires to the tuning encoder should be worthwhile. These wires carry pulses which can be picked up by the audio circuitry. On my DX-440, I shielded the tuning encoder wires in a piece of grounded coax braid and now it doesn't make any audible difference if the lock switch is the on or off position.

Yea, constant lies, and knowing that HD is going down the toilet. On
Radio-info, she was quoted as blaming the digital hash noise, on AM,
on wide-band receivers, only. Must be difficult to be the
Communications Secretary, when she is constantly under Bobby's desk.

Passport 2008 Arrives, Books shipped
Monday, October 22nd, 2007 | Comments(0)

In Pamplona, Spain, they have the annual running of the bulls. In Penn's Park each year we have the running of the books.

A shiny 18-wheeler arrived from the printer this morning loaded with Passport 2008 books, which were immediately processed and shipped by Priority Mail today for all corners of the world. Orders from now on are being turned around as soon as they are received, so the website has been updated to reflect this.
We're Back!

Maybe some will have them by the end of the week!

Mr. Silverstein, the owner of the World Trade Center buildings
admitted to pulling building 7 in a PBS special.
see a clip on google video: http://video.google.com/videoplay?docid=-7750532340306101329
According to several websites building 7 collapsed at or around 5:20
pm, just over 6 hours after the first two towers fell. Pretty
impressive demolitions job considering in 6 hours a crew was called up
with materials in hand and rigged that 47 story building to blow.

2641. ? KJCP ? 1100 kHz - The Neal Boortz Show @ 08:10 AM PDT

Newsgroup: rec.radio.shortwave
Date: 2007-10-24 17:05:36 UTC
From: RHF <rhf-newsgroups@pacbell.net>
Message-ID: <1193245536.267349.139620@q3g2000prf.googlegroups.com>
Source record: 128561

? KJCP ? 1100 kHz - The Neal Boortz Show @ 08:10 AM PDT

Usually hear KFAX 1100 kHz from San Francisco, CA and
instead I heard ? KJCP ? The Neal Boortz Show on 1100 kHz.

Clearly it was "The Neal Boortz Show" cause it was Neal Boortz's
voice saying it was "The Neal Boortz Show".
BOORTZ => http://boortz.com/
http://en.wikipedia.org/wiki/Neal_Boortz

The Radio Frequency Display Does Not Lie : 1100 kHz
and the Radio Station ID'ed itself as ? KJCP ? 1100 kHz.

So the only Question is the Radio Station's Call Letters : ? KJCP ?

? KJCP ? Not in the FCC Data Base for AM/MW Radio Stations
* AMQ AM Radio Database Query
http://www.fcc.gov/mb/audio/amq.html

? KJCP ? Not Listed in the RadioLocator Data Base for
AM/MW Radio Stations => http://www.radio-locator.com/

Note - Could be one of two 'New' Radio Stations
in the FCC DataBase for 1100 kHz :

* "NEW" AM 1100 kHz @ 50 KW DA3 Daytime - Sunrise Manor, NV

* "NEW" AM 1100 kHz @ 50 KW DAN Daytime - Boise, ID

One 'other' Option is a Call Letter Change for
an existing AM/MW Radio Station -such as-
* KFNX 1100 kHz @ 50 KW in Cave Creek, AZ
* KNZZ 1100 kHz @ 50 KW in Grand Junction, CO
* KAFY 1100 kHz @ 4 KW in Bakersfield, CA
* KWWN 1100 kHz @ 20 KW in Las Vegas, NV

-OR- Has KFAX 1100 kHz @ 50 KW in San Francisco, CA
undergone a Format and Owership Change ? ? ?
-NO- I just checked at 10:01 AM and KFAX is still KFAX.

Does Anyone Know Anything About ? KJCP ?
.
Radi-Osophy HD-100 {Kitchen} Radio and
70-Foot Triangle Loop Antenna <WSW/ENE-FP plus a
1:1 Matching Transformer and Coax Cable feed-in-line.
http://www.radiosophy.com/products/hd100.html
.
yes i heard it on the radio -but- where was it ? ~ RHF

Twain Harte, CA -USA-

It's amazing what nonsense the 911 kooks will swallow. It normally takes
months, minimum to set up a building for demolition, but yet the kooks
claim it was done almost instantly.

A kook's mind is a terrible thing to...umm, waste again?

The only pamphlet is (was?) one that warns border crossers of the hazards of doing so. They know people are going to do it, so they are giving them some precautions, not instruction.

Mexico does not provide water and food. Many US humanitarian organizations do that, on the US side, with water stations that are replenished often. This is to prevent people who are already there from dying... again, knowing they will come no matter what.

Mexico has no national policy of encouraging migration. What Mexico has is an unsustainable rural economy based on the ejido system that forces people to migrate either to big cities of Mexico or to the US.

There is no government policy to encourage emigration nor does the Mexican
government give food and water.

The #1 radio station in New York has a cume of over 2 million. That is one station. The daily cume of the two satellite companies is not even 1/2 of the subscriber base, so about 3 of the top NY stations... three stations in one market... is greater than the national cume of the satellite stations.

Source record: 128583

Over the past few years, I have been toying with the idea of developing a Quadrature noise blanker. This might be just the thing that can remove that digital sideband noise from the adjacent channels of the IBOC stations. Listening to the frequencies between 1100 and 1150Khz in the Chicago area in the evenings is a joke. With the various stations' sideband noise encroaching on each other, it sounds like somebody had a noise vacuum cleaner running all of the time.
The IBOC folks did a good job of starting to ruin the MW band.

Try to understand your place in this. You are being used. Do you understand that you are being used by socialists to promote their agenda?

Look carefully at who is making these assertions. Look at the evidence they purport supports their position. Notice they are not making their case "scientifically" but instead make assumptions " leaps of faith actually" and expect you to "believe" these assertions. Again, there is no Proof according to logical, scientific method that "proves" man is even making a significant contribution to climate change.

Look at the evidence they do not provide that man is "responsible."

Look at past climate change when man made CO2 was not a factor.

Look at what is happening currently on planets in the rest of the solar system where man is not a factor.

Think about these subjects and don't parrot.

The Cisneros family, abut the 5th richest in Latin America, owns the coke
bottler for all Venezuela, the Televisa TV operation, and about 100 other
companies.

I have paper copies (notes and some copies) of the HR-10B modifications
that you are asking about -- but have not found an Internet source.
Many of these are marginal to bad.
The voltage regulator tube mod for regulation of the VFO voltage
is probably the most popular.

No, that is not the profile of the satellite subscriber. In fact, the two biggest groups are truckers (one signal, coast to coast) and Howard Stern fans.

When Stern was on terrestrial, in LA the bulk of the spots were for things like credit repair, bail bonds, pawn shops and lawyers specializing in things that were not wills and trusts!

The more affluent tend to go to the local-content news or news and talk stations.

I worked with a "Chemtrails" believer, a really smart kid, who seemed to deteriorate over the course of a year to the point he got fired for sleeping most of the time, so deeply that he had to be shaken awake, yelling at him didn't work. When he wasn't sleeping, he was looking up stuff about chemtrails, and sending it to several of us who laughed at him.

I don't know what he's doing now. Last I heard, he was back living at home, and smoking a lot of pot.

Then there's the religious whackjobs. We're down to two, both not too bad, compared to a about a dozen we had previously, who were almost all members of a local "cult" type church. What a joy to be around they were..

Yes, the address DID in fact change.

History: Kiwa Electronics website was at www.kiwa.com from Oct. 18,
1995 until a few days ago. Kiwa Electronics still has a while to keep
the domain if they still want it. It will be over a month before
anyone else can get that domain.

On January 4th of this year, Kiwa Electronics applied for and got the
domain www.kiwaelectronics.com and have had their website on both
domains until a few days ago.

I can think of a few other things that would remove digital sideband
noise from adjacent channels of IBOC stations, but they're all highly
illegal.

I hear that due to his mass leakage of BS onto this ng he is no loner
full of it.

Humane would be if Mexico focused on their national interests
(schools, business etc) so their citizens did not feel it necessary to
illegally cross a border. Perhaps though those of us in this
newsgroup should set up a printing business and bid way cheap on
printing their booklet and change the content so they are directed to
only come to the US when on their way to Canada.

Of course, the last I heard a Canadian official was complaining of an
influx of Latino immigrants and he blamed the US for it - his claim
was that the US crackdown (which we all know are primarily for show)
on illegals is forcing them to Canada. He further went on to complain
how these folks are not desired immigrants due to lower education &
skills than than what would benefit their nation. Maybe instead of a
fence we should just build a bigass bridge from the southern to the
northern border.

Source record: 128714

William Fieldstone unexpectedly passed away on Sunday afternoon.

After serious consideration I decided to remove his stopRFI Yahoo group.

As Telemon pointed out when that group was started the bulk of the information
is available on the web via Google searches. I have neither the time, energy or
interest in keeping it a growing and relevant library and rather then let it wilt on
the vine so to speak, I decided that it would be more useful to simply removed
it an all contents.

At his daughter's request I have also removed Will from the wide range of online
communities he was part of.

His hotmail and yahoo Email accounts are inactive.

Terry

2695. Don't Touch That Dial

Newsgroup: rec.radio.shortwave

"Don't Touch That Dial"

"HD Radio addresses will be much like my apartment building. And hunting for one of those extra digital channels could be like hunting for me. The number on my building is 15. To find which apartment I'm in somebody must first get inside the building, not easy as there are codes, locks, bars, guards and dogs. To find the digital channel adjacent to an FM channel - call it HD2 - you must first, figuratively, get inside the building - tune to the main FM channel - so your receiver can lock-on to the digital signal. Who's going to go through all that trouble? Nobody, said Bob Harper's study... Are there any other reasons why the digital choice around the world is iPod?"

http://followthemedia.com/alldigital/dial25102007.htm

Yup, yup, yup!

Ass. It was known in the hour that a building -- I dunno from "7" --
was sufficiently damaged by the junk on and against it as to
constitute a hazard to itself and the surround.
It was dropped in on itself so that it wouldn't fall sideways.
IIRC, one smaller service building (mostly automated) was already
crushed.

Not much of an objection; the main towers were dropped in an hour,
remember?
And while it may take months to calculate and map the charges for

a steel truss, nobody's gonna leave the charges in place for more
than a couple days.
For stressed skin, you point "here, here, and here."
And nobody had to worry about getting rubble on the surrounding
buildings, you know.

That's the lovely thing about the world. Perpetual references to sex, and you have the audacity to try to censor this individual, the Founding Fathers are turning in their graves. (We all know that the Founders secretly intended to protect the future rights of pornographers, and had no intent on protecting Religious Freedom and the Right to Political Dissent).

No one takes women seriously anyway, not even women. Just think at how asinine the Woman's Right Movement was. They've lowered women to the level of men, taught them to dress lasciviously, and gave men everything that they want sexually, under the guise of being a "Liberated Woman". What a joke, men now get laid at an unbelievable rate, but women believe that they are in control.

I work for a major cooperation in the U.S., at the peon level of course, but still have the opportunity to see the women that are placed into various jobs of importance. There are very few of them that don't have an Under the Desk approach to having secured their positions (nod nod wink wink). They are always viewed as Playthings for bored men. It's funny, I notice they never hire ugly ones, imagine that, I wonder how this keeps happening?

In a previous job, a supervisor's secretary had quite her job, she was a knock-out. She was replaced by this ordinary looking woman that looked infinitely qualified for the job, a downright Jane Hathaway (no exaggeration) from the Beverly Hill Billies. I was incredulous, the idea of using a woman that will actually do the job and not serve the position of eye candy for the higher-ups. Well, not to be disappointed, she was only a temp, a beautiful babe was brought in to replace her.

Isn't it special when the entire world is expected to change to suite the needs of some major corporation, rather than the corporation changing their products or offerings to suit the needs of the people. Of course HD Radio may not be a defective concept promising to bring misery to the entire listening community, the problems that they have experienced must be due to a few "rogue" radios with wideband receivers. Right. If you believe this, I have some ocean front property to sell you in Montana, oh, and you get to choose the Atlantic or Pacific Ocean.

Good day RHF, and remember, On a clear night, you can hear forever.

Artaud

Why modify it? It's a 40 year old entry level radio. Why try and make it
into something it was never meant to be? I respectfully suggest that you
just restore it to operational condition and enjoy it for what it is.

I may have to agree with Billy about not modifying the rig. I say "may" because I'm not aware of the mods listed - or how they might improve the radio if any. NOR have I heard of any rigs having been done - and any results.

Mods "can" be nice - if they "enhance" a radio's performance. However - most of the mods I see - tend to turn a radio to crap - more often than not. I've done some myself - and well - though I know they were done correctly - lets face it - the radio worked better as it was "intended" and it didn't take me long to put it back to normal. Then I've seen still other's that flat out made radios sound like pure garbage.

But in the grand scheme of things - based on my own experiences and not knowing the end results of said mods -I'm inclined to agree with Billy - retore it as it was meant to be - and enjoy the "relic" of the past. Besides, if you go to sell it again, it seems to me, it would fetch more - restored OR "original" - than butchered up.

Just my 2 cents.

You are being used by perverted capitalists who have no agenda, other
than making money as possible and maintaining their power base (pun
intended). Personally, I think it's over, except for the lovely
chaos. You dropped the ball 30 nyears ago, when you could have done
some good.

Class A amplifiers are linear, AB are fairly linear but have
relatively high intermod distortion.

I just recalled a few radios (transmitter/receiver/transceiver) - I was asked to "undo". One of which was a Drake. Though the work - "seemed" to be done "neatly" - it turned the rig into a pile of dung. The owner paid one guy to modify it - paid me to "un" modify it. Just goes to show - they're not always what they're cracked up to be/do.

- Wouldn't it be prudent to prepare for the worst just in case?

Understanding that Climate Change may be in-fact be happening at
this point in this present Epoch in the Life of a Planet {Earth Age}
is good for Mankind. - http://www.dinosauria.com/dml/history.htm

With this Knowledge Mankind can forward in our Planning and
Adapt to the Changes* caused by the Earth's Weather getting
Warmer or even Colder.
* A Hundred or better a Thousand Years will tell Us better just
what may be happening.
http://pubs.usgs.gov/gip/geotime/time.html .
{Hysteria about "Global Warming" Serves No One Except
the One World Control Freaks.}

Adapting to these Climate Changes is good because it will help
the majority of Mankind to Survive and Adjust to a 'New" Earth.

- What harm would it do?

Yielding to the Fear Mongering of "Global Warming" and the attempt
to use this Fear as an Means-of-Control of the Masses to Dictate
"How People Will Live In The Future" according to the word of the
Almighty AL GORE - Is Not The Answer [.]

The Monitization of Pollution {Carbon Credits} is Not The Answer.
Just a Scheme to Gain Economic Control Over World-Wide Power
Generation and Global Industrial Production and Method Taxation
and Limitations on All Human Activity.

Common Sense -IS- The Answer : And Common Sense Says :
1st - We Understand
2nd - We Adapt
3rd - We Survive

That's Common Sense -and- The Answer To The Fear Mongering
of "Global Warming" is the Understanding that Climate Change does
Exist and that We 'may-be' Looking at a Period of Climate Change
in the Future of Mankind upon this Planet that We Call The Earth.
* Understanding The Truth About Climate Change.
* Adapting To The Realities Of Climate Change.
* Mankind's Survivial Through Climate Change And Beyond.

common sense - makes sense ~ RHF

Radio Australia/ABC Radio National had a great "Background Briefing" about
the class system and how business is done in Mexico (from the Australian
perspective) a couple of weeks ago (October 13?). They'll have the podcast
there for a couple more weeks, and a transcript.

<http://www.abc.net.au/rn> and take the Background Briefing link
in the "Programs A-Z" pulldown menu.

Can you live on $1.50 a day? Don't pet "the gato".

Well, I will tell y'all what.The last few days and nights right here in Jackson,Mississippi,,, the weather has been rainy and wet and cloudy and cold.Right now, it is still cloudy and cold outside, not raining though, right now.So, where is that confounded ''global warming''? Doggy (Blueberry) is sleeping up under a wool blanket on her couch, snoreing her arse off.You just know when a dog is feeling cold,,,,,, It's COLD! cuhulin

All this is now dead thanks to HD/IBOC:

"ABC Citadel suspends AM IBOC"

"The order, effective immediately, is reportedly for all Citadel AMs
running IBOC at night. While no reason was given for the order, it is
believed that interference issues are the most likely factor."

http://www.orbitcast.com/archives/abc-citadel-suspends-am-iboc.html

"AM Broadcasters Back Away from HD Deployment"

"This is a major setback for the adoption of HD Radio, especially on
the AM dial, and Citadel is the first large broadcast conglomerate to
back away from full deployment of the HD broadcast technology.
Although the company's gone out of its way not to characterize its
move an indictment of iBiquity's proprietary digital broadcast
standard, the problems with AM HD broadcast interference are well-
known and -documented."

http://diymedia.net/archive/1007.htm#101307

"Left in the dark"

"Local ratings show that plenty of Pocono listeners tune in to AM 770.
But about two weeks ago, WABC radio became impossible to hear in the
Poconos after sundown. And although the daytime signal is still
strong, WABC it is not likely to he heard here in the dark again. What
happened. An advancement in broadcast technology. WABC flipped the
switch for HD Radio. Something many stations are doing with, so far,
little notice from the public."

http://www.poconorecord.com/apps/pbcs.dll/article?AID=/20071001/LOCALENT/710010324

"Night of the Bees"

"Radio listeners across America are trying to hide from a monster, but there is no shelter. After spending its adolescence in technical trials during daytime hours, IBOC has now come out at night... For example, in New York City, WOR broadcasts on 710 kilohertz. When it turns on its IBOC equipment, the digital noise it produces can be heard on 690, 700, 720 and 730 kilohertz with a reduced fidelity analog audio signal remaining on 710..."

http://karlzuk.blogspot.com/2007/09/night-of-bees.html

"AM HD Radio 24 x7 as of September 14, 2007"

"The HD Radio Interference, we will coin it HDRI, is characterized as a loud obnoxious frying egg noise on top of an AM radio station's analog signal. Here at PopularWireless HQ the kitchen is open and the eggs are cooking big time. A favorite here has been New York's famous WABC where many enjoy listening to Coast-to-Coast AM in the early mornings. WABC is now plagued by HDRI making listening impossible at times. Across the AM dial the analog receiver is sizzling away."

http://www.popularwireless.com/blog1/2007/09/22/hd-radio-24-x7-as-of-september-14-2007/

"Digital Signals Spark Static From AM Radio"

"A growing number of radio listeners are encountering similar interference -- hisses, whistles or static -- on their favorite AM stations. The problem for WTRI began about a year ago, when Bonneville International Corp.'s WTOP, the AM station at 1500, began using a digital signal that interfered with WTRI's analog signal in some broadcast areas. It's one of the unexpected consequences of the radio industry's transition to digital broadcasts."

It was in the "chemtrails", I guess ;). I think it was actually a
combination of allergy pills and booze, with a pot "kicker". That, and
he used to eat a huge meal when he came to work.

Have you noticed that there is always a cataclysmic reason for the
decisions David supports.

AM HD is the last hope of AM Radio. Without it, it can't survive.

Illegal immigration is the last hope of a people forced to live in an
unsustainable economy.

All rights and privileges are the last hope of immigrants illegally
coming to this country forced to live amongst us.

There are times he sounds more like a professional lobbyist than a
broadcaster. A highly paid shill for the cause du jour. Johnny Cochran
without jewelry.

Except for his citizenship, I've never heard him renounce anything.

I heard a climatologist on WGN some months ago. He was talking with the host about global warming. And he said, if you look at the data, it does, indeed make quite the dramatic point. And he quoted facts and figures that made quite the case. Most of which were used in Gore's case.

But if you stepped back a frame, he went on, you started to see that scientists today are looking at a snapshot, a highly cropped snapshot without context.

NOAA figures show that we are NOT in an unprecedented period of global warming. That the peak year so far, in recorded data is 1934. Highest global temperature on record.

That geological data gathered through core samples have revealed that it was far warmer in the 13th through 17 centuries than it is now. Or will be even if current projections are accurate.

And he went on with other data.

And then he paused and explained that even if the data are accurate, a far bigger indicator of global climatic trends agricultural. Which crops grow where, and which don't. And the most easily observed, and most accurately indicative is where wine is grown.

Wine vineyards only grow in specific conditions, one of which is average temperature.

And wine vineyards have been slowly moving south for centuries.

At one time, England had a thriving wine economy. Wine grew as far north as Scotland, and exports were highly prized worldwide. Many of the French stocks were born of English roots.

Leif Ericson's expedition reported enormous wine vineyards growing in north of Nova Scotia. A German in his party, named Tyrker, left the encampment and wandered into this northern wine country for months. When discovered by other members of the party, he was drunk. So vast was the region of wine grapes, they call the place Vinland.

Today, there is little wine grown in Canada. Due to the unfavorable cool temperatures.

The climatologist concluded, that if you look at the history of where wine grows on this planet, you'd see a clear pattern of overall cooling. Which is what you'd expect after the recession of the glaciers at the end of an ice age (Quaternary) as processes spike global temperatures, which trigger the buffer mechanisms that result in gradual reduction of temperatures.

Overall, he said, a cyclical process. And a natural cyclical process at that. But cyclical heating and cooling, in conjunction with natural entropy, results in overall global cooling. Which is what we've seen over the last 700 years.

As for what's happening right now? We've seen an overall increase in the output of the sun. Temporary temperature spike. That will fade. More importantly, studies recently conducted in Yellowstone and environs revealed that the hunting to near extinction of wolves in the park did more to damage the environment than burning it to the ground. By removing large carnivores, large herbivore populations were allowed to mushroom, resulting in a defoliation of large areas of the park. Aspen trees disappeared almost in totality. Which had an astonishingly large environmental and climatological impact. By reintroducing wolves into the park 5 years ago, herbivore populations have abated, and foliage has returned, including Aspen trees. Rainfall patterns have returned to previous states. And while some wolves have to be taken as they get out of the park and endanger surrounding human settlements, the wholesale slaughter of wolves has NOT begun. And natural selection has continued unabated. With highly positive results.

Which suggests that any man made impact on global climate change is not by shift in the carbon footprint, but by the wholesale slaughter of species without reason. Small takings are negligible. The hunt to extinction...that's another matter.

Moderation in all things would then appear to be the key to survival.

Would be the key to maintaining a healthy environment.

Pre Columbian natives knew this for centuries before us. But this is a problem created, realized and solved. Effective impact-zero.

But just look at the gradual southern migration of wine countries on this planet. That can ONLY happen in conditions of global cooling.

This guy was dismissed by several callers as a heretic who deserved to have his funding revoked.

Which is typical of religious zealots: You don't like the opposing viewpoint-silence it.

The truth does not require, nor appreciate, such tactics. Only a politically expedient truth needs the silence of the opposition.

The science is not settled. But the moral obligation is clear: Let cooler heads prevail and resist kneejerk responses which will have long term global consequences.

No, but you can survey 30,000, 7500 a quarter, (LA metro, just over 10
million) and have results that can be replicated... the test of an accurate
survey... within a very narrow margin of error.

Satellite subscribers tend to use more terrestrial radio, too.

You are the Kook that thinks a group took over some jets they had never flown before and singly handed pulled completely baffled the whole defense system of the USA. You are the nutjob here that is clear. You are incapable of free thinking past what has been spoon fed you.

I have waited several days for my rage to subside before speaking.

After serious thought I realize there is nothing I can say to do
justice
to such a loathsome creep as you.

You remind me of all that is sad and evil in mankind.

A good object lesson for others whose hate filled miserable
little souls might not have atrophied beyond repair.

Terry

The new Israel Radio shortwave schedule (and satellite info) have been
posted at:

http://israelradio.org/sw.htm

The current intention is for shortwave to cease at the end of 2007.

It has not yet been posted at
http://www.iba.org.il/reception

but it probably will be updated there next week.

It probably can't be helped by HD, even. It is dying in front of our eyes.
>
> Illegal immigration is the last hope of a people forced to live in an
> unsustainable economy.

No, it is an option. Most of those displaced by the collapse of the ejido
system (when the communal land does not "grow" and the population does) go
to larger cities in Mexico. But as long as there is little enforcement in
the US and lots of jobs, emigration will be one of the options taken by the
young, mostly.

This happens all over... there are a million illegal Bolivians in
Argentina... if there are jobs, "they will come."
>
> All rights and privileges are the last hope of immigrants illegally

Yes, despite what you have apparently been told, shortwaves make it into
Canada.

All kidding aside, here's a couple general rules of thumb that'll get
you going:

During daylight hours tune around above 9mhz for best results.

When the sun is down, tune around below 12mhz.

How about this: make one on-topic post for every three off-topic posts. It'd be interesting to see whether you can 'hack it' posting legitimately.

The "Greenhouse Gas" for Earth (which is not CO2) results in "Global
Cooling."

Thirty-five years ago, Al Gore overheard part of a guest lecture by a
Famous Personage speaking well outside his expertise, and wet himself.
The result is the current "Carbon Dioxide Monster."
Look it up, since he said every part of it himself.

Get a map. Draw a line from Logan (Baahstin) to Idlewild (NYC).
Guess what lies 30 seconds flight beyond the base-leg turn onto
Idlewild.
In short, "the whole defense system of the USA" had 30 seconds to
detect /and/ react when the "WTC plane" failed to turn onto base leg.
Draw another line from JAX to Dulles.
You get to the Pentagon before you get to Dulles.

Too yellow to wear a /saxe/, he got his "police" to disarm 288
sovereign Americans whose right to keep and bear arms shall not be
infringed.
That way, /nobody/ could show him up by facing a box-cutter and
saying, "That's no' a noif."

I.e., it is /impossible/ to take over a plane if only a dozen
passengers are wearing short swords.

There was a young fella whose shit
Contained a small corn-kernel bit
Which caused him grave doubt,
So he picked it right out
While he chewed all the rest, for it fit.

And just watch what happens when their big brother, named Wimax, gets
here.

Get the stretcher ready.

The good news: Wimax won't destroy the MW band.

KPBS Radio 89.5 Maintains Constant Fire Coverage despite Transmission Troubles
By Lauren Coartney

The Harris fire raced up Mount San Miguel in San Diego early Monday, burning through power lines by 5:30 a.m. and cutting power to several transmitters situated at the crest. With no back-up generator, KPBS, the city's public radio station, lost its signal and went off the air.

One of only two local radio news operations, KPBS had become a crucial source of information on the 2007 fires, which were engulfing San Diego from the east. Many city and county officials had been directing the public and their own agencies to 89.5 FM during news conferences.

"Even when we lost our radio transmitter, we kept broadcasting continuously via live Web transmission," said Nancy Worlie, KPBS Communications Manager.

FM 94.9 Partnership

Knowing thousands of people were looking to the station for critical updates, the radio programming director, John Decker, called several stations for help before alternative rock station FM 94.9 agreed to temporarily carry KPBS' broadcast on their frequency.

Though KPBS-TV Channel 15 also went off the air, service to Time Warner and Cox Cable customers was uninterrupted, since KPBS provides a direct fiber feed from the university to those cable service providers.

Not until Wednesday was Rockley Curless, a KPBS engineer, able to get to the top of Mount San Miguel to check the transmitter. While a community tenant communications building 10 feet away was completely destroyed, the building that houses the KPBS transmitter was unharmed.

"There were even little green plants still around it," said Leon Messenie, director of engineering. "We feel really lucky."

Currently, the TV and radio stations are back on the air, running off of a low-power generator located on the SDSU campus. They will return to full power as soon as San Diego City officials and CAL FIRE approve generator installation on the mountain.

You're still fighting the last war. Money is obsolete (or soon will
be). Deficits don't matter.

If we spent on real humanitarian aid what we spend on military
adventures we'd win the moral high ground in an instant. No one would
dare criticise the rich nation saving millions of lives.

> Troubles
SNIP

Indeed KPBS did a great job, as well as FOX which was on nearly 24 hours with excellent coverage.

Others were ABC, NBC, CBS, CNN

87.7 MHz FM was set up with fire news for mobiles and those with power outages (25,000 at one time)

Amateur radio operators were on 2 Meters. 440 MHz, and HF in full force. Callouts were made to ARES and RACES assissting the Red Cross, and County Emergency Coms.

Hams activated fire information nets on several repeaters for mobiles and those without commercial power. Some repeaters were on battery power or generator power when the main power lines failed. Volunteers carried fuel to the repeater sites when needed. Some repeaters were destroyed in the fire, but many have been on continously

Communications were vastly improved over the 2003 fires.

The internet was an excellent source for fast breaking news, including road closurers, traffic flows, evacuation center locations, evacuation orders, videos, fire maps, fire status updates, water and air quality, and much MUCH more.

- - Slacker.com creams all of them!

- Turn on a computer to hear music?

David, AGREED ! ~ RHF

DOH ! - Internet Radio Ain't Radio [.]
Having to first Turn-On a Home Computer and then
Daisy-Chain it into a Re-Broadcast System to then
Turn-On an Audio Output 'device' AIN'T Radio.

-but- When Internet Radio becomes as easy as a "Toaster"
to Plug into the AC Outlet and Phone Line; and simply

Turn-It-On then it may have a 'chance' -but- WiFi and
Networking with a Home PC is not an EveryMan solution
/ alternative to a Free Over-the-Air Radio Broadcast and
Easy {Care-Free} Radio Listening.

Plus it should Cost-No-More-Than an Average Priced
Toaster, Blender, Coffee Maker or Clock Radio.

Simplicity and Easy-of-Use is where XM and Sirius
Satellite Radio have it all over so called Internet Radio.
1 - Plug the Satellite Radio 'In'
2 - Connect the Antenna
3 - Turn-It-On
4 - Turn-In and Enjoy Listening
Oops - It Ain't Free ! - The Never Ending Monthly Fee . . .

IBOC Crock - You are not only Anti-IBOC -but-
You Are Also 'Anti' Free Over-the-Air Radio Too !

iboc crock - your's is a say life - happy to be me :o)
- happy to be able to listen to 'free' radio ~ RHF
.

2824. A Significant Sign in the Death of HD Radio - it's over folks!

Newsgroup: rec.radio.shortwave
Date: 2007-10-26 19:05:33 UTC
From: PocketRadio@gmail.com
Message-ID: <1193425533.196325.319700@t8g2000prg.googlegroups.com>
Source record: 128693

"A Significant Sign in the Death of HD Radio"

When my father was on his death bed my sister, who is a practicing nurse, told me he didn't have long. She knew because of being able to read the signs his body gave off before the lungs reached their last breath. Dad died sixteen hours later.

The analogy to my father dying and that of HD Radio's demise is not that different. Look for the signs indicating the body is giving out, then start counting the time until you call it a grievous day. Those with the schooling know the signs. Whether they relay them to those who don't know is what's keeping HD Radio alive, so far.

The radio industry is giving off signs that HD Radio is dead, even though we keep hearing bright comments being uttered by iBiquity execs. A recent quote from HD Radio Alliance President/CEO Peter Ferrara "predicts by 2011 (model year 2012) HD Radio will be optional in every car and standard in most." (Radio World "Let the 'Monetizing' of HD2s Begin" by Leslie Stimson). Mr. Ferrara is either being overly optimistic, or does not understand the business side of getting inside a vehicle's dashboard.

Another set of words quoted to Mr. Ferrara: ""We've lost sight of the fact that FM took 10 years" to become standard." He's not pointing out, though, that FM was building an audience based on programming which related to their lifestyle of the day, and AM was not serving this group. (Kind of sounds like the flight from regular broadcast to new media. But, that's another article.) Use your own ears and sample HD Radio at Clear Channel, Cox, or iBiquity's own site. Do you hear anything that "relates" in the same way FM did in its early years?

While the public's pulse on HD isn't beating, the latest glaze over this problem is in a rebuilt HD Radio Alliance web site to educate retailers and sales personnel on the benefits of HD Radio. Please, visit this site. Register. See what information the HD Radio Alliance is giving the retail industry to sell HD Radio. See if it differs from anything in past publicity releases. See if it contains the "deal closer" concept, or anything the excites the audience (clerks and retail management). This is death sign #1.

Next sign, and this is all the more you need to digest on this topic: HD Radio is not being promoted on radio station web sites. The radio industry has given up with "extra" promotion, over that huge commitment made by the HD Radio Alliance that's forced all member stations to comply.

Despite $230 million committed to promoting HD over the airwaves in 2008, and a few hundred million more spent over the past two years, a recent visit to thirty radio station web sites found only four that had any mention of HD Radio on the home page - and one did not link that mention to anything HD.

http://www.audiographics.com/agd/102607-1.htm

It's over RHF, Eduardo - Ha! Ha!

I hear that iNiquity's next project is to bring back black and white
television. They'll be putting a couple of hundred thousand dollars
into promoting it, no doubt.

Sorry, I missed the best part:

"As you're breezing through this list also keep your eyes open for
indicators that the radio industry still has a lot to learn about web
site design. Few of these sites refrain from what I call the auto
dealer approach: Scream as loud as you can, flash as many bright
colors as you can think of, and fill your 60 second commercial with 75
seconds of copy.
The whole lot of 30 web sites visited reflect similar design (except
for a few, as mentioned). The radio industry may be talking up good
stories about its intent to compete online, and how HD Radio is being
embraced by the audience. But, so far, there's little evidence that
the radio industry is taking anything seriously. As for the absence of
mentioning HD Radio on any of these web sites home pages... that
either comes from radio not believing in the power of the internet to
sell product (which it can never admit to clients), or its lack of
mentioning HD Radio comes from the beginning of the radio industry
distancing itself from what's turning out to be a Huge Disaster! HD
Radio's death is imminent. It's only a matter of time, if you read the
signs."

It wouldn't have taken a lot to stop them, no doubt.

I'm sure Jonesy, if he was on board, could have stopped the hijack cold,
using a rubber band and a thimble. He's all mankook, you know.

Shortwave Radio Listening (SWL) in Canada, North America and The
World !
http://groups.google.com/group/shortwave-listener-qsl-reports/msg/e62abc55af79a2e3

Jeff Grant 240, - YES !

I suggest that you first Check-Out of the "CBC Radio Overnight"
Program
Broadcast Schedule : http://www.cbc.ca/overnight/schedule.html
* CKZN from St John's, NL on 6160 kHz {24/7}
* CKZU from Vancouver, BC on 6160 kHz {24/7}

"CBC Radio Overnight" Program - Weekday Schedule
12:05 a.m. Sirius or BBC W/S
1:05 a.m. Radio Netherlands
2:05 a.m. Radio Sweden & Radio Australia
3:05 a.m. Channel Africa & BBC W/S
4:05 a.m. Deutsche Welle & Radio Polonia
5:05 a.m. Radio Australia, Radio Prague, Deutsche Welle
& Voice Of Russia

"CBC Radio Overnight" Program - Weekend Schedule
12:05 a.m. Sirius or BBC W/S
1:05 a.m. Radio Netherlands
2:05 a.m. Radio Prague & Voice Of Russia
3:05 a.m. Radio Sweden & BBC W/S
4:05 a.m. Deutsche Welle
5:05 a.m. Radio Australia

This can be the simplest way to here News from Around-the-World
re-broadcast to you right from inside Canada itself.

CKZN - CBC Radio One on 6160 kHz
from St John's, NL Canada
http://members.aol.com/baconti/xckzn.htm
http://en.wikipedia.org/wiki/St._John%27s%2C_Newfoundland_and_Labrador

CKZU - CBC Radio One on 6160 kHz
from Richmond {Vancouver}, BC
http://en.wikipedia.org/wiki/Richmond%2C_BC

2840. Icom 746 Pro as SW Receiver

Newsgroup: rec.radio.shortwave
Date: 2007-10-26 22:23:56 UTC
From: sodaant@gmail.com
Message-ID: <1193437436.553169.195370@k35g2000prh.googlegroups.com>
Source record: 128760

How does the Icom 746 Pro's receiver compare to some of the medium to high-end DSP-based SW receivers, such as the JRC NRD-545 and the TenTec DX-340?

I'm mostly interested in LW and MW DXing--how does the 746 perform on these bands?

It seems to me that the 32-bit DSP and 24-bit AD in the 746 are a cut above the JRC and TenTec, but does this translate into better real-world RX performance?

2845. How to reset a DX-392

Newsgroup: rec.radio.shortwave
Date: 2007-10-27 00:45:34 UTC
From: kc8slz <kc8slz@yahoo.com>
Message-ID: <1193445934.774199.274010@q3g2000prf.googlegroups.com>
Source record: 128765

Hello all,
I know this is an old radio and topic,but,it is new to me.
I picked up mint DX-392 not too long ago,and want to eliminate the
muting while tuning around the shortwave bands.I have found several
different ways to do this,but each one requires a reset of the radio
as an end step.This is where the problem is,my DX-392 DOES NOT have a
reset button or switch (I have disassembled the radio just to make
sure),however,the boards are marked "Sangean ATS-818CS".
Does any one know how to reset this radio?, and what is the proper mod
to get rid of the muting.
Thank you for your time.
Paul.

Paul [KC8SLZ],

How To Question : Reseting the RadioShack DX-392 Radio
/ Sangean ATS-818CS Radio

1 - Remove the Batteries from the Radio for 24 Hours.

2 - After Step # 1 Above - Place a Wire Jumper 'across' the
Radio's '+' and '-' Battery Input Terminals for 3~5 Minutes.

3 - Remove the Jumper; Install the Batteries and Re-Test
the Radio for operation and function.

I have not owned the PRO, but did own the original 746 in addition to all the 756's- have the 756PRO III now. They are all deaf below 500KHz because of the HPF Icom switches in when tuning MW and lower. I seem to recall the PRO's (756) also have an attenuator that is automatically switched in around 1.5MHz. I use a Palomar LF converter on the RX only port for LF reception on the PRO III.

My ex-wife's cousin, twice-removed, on her mother's side of the family said that she had inside information that there was a irreplacable, world-class collection of early Corvettes in WC7. She asked that we keep that info out of the media. Please respect her wishes, as I have.

That's a showstopper for me if it can't be fixed. Is there a published
mod to un-cripple performance below 1500 KHz?

2861. the AIM of LIFE

Newsgroup: rec.radio.shortwave
Date: 2007-10-27 08:18:22 UTC
From: abdo911 <jipksaman@gmail.com>
Message-ID: <1193473102.343724.265420@d55g2000hsg.googlegroups.com>
Source record: 128781

What is your purpose in life? What is the rationale behind our life? Why do we live in this life? These questions frequently intrigue people who try to find accurate answers.

People provide different answers to these questions. Some people believe the purpose of life is to accumulate wealth. But one may wonder: What is the purpose of life after one has collected colossal amounts of money? What then? What will the purpose be once money is gathered? If the purpose of life is to gain money, there will be no purpose after becoming wealthy. And in fact, here lies the problem of some disbelievers or misbelievers at some stage of their life, when collecting money is the target of their life. When they have collected the money they dreamt of, their life loses its purpose. They suffer from the panic of nothingness and they live in tension and restlessness.

Can Wealth Be an Aim?

We often hear of a millionaire committing suicide, sometimes, not the millionaire himself but his wife, son, or daughter. The question that poses itself is: Can wealth bring happiness to one's life? In most cases the answer is NO. Is the purpose of collecting wealth a standing purpose? As we know, the five-year old child does not look for wealth: a toy for him is equal to a million dollars. The eighteen-year old adolescent does not dream of wealth because he is busy with more important things. The ninety-year old man does not care about money; he is worried more about his health. This proves that wealth cannot be a standing purpose in all the stages of the individual's life.

Wealth can do little to bring happiness to a disbeliever, because he/she is not sure about his fate. A disbeliever does not know the purpose of life. And if he has a purpose, this purpose is doomed to be temporary or self destructive.

What is the use of wealth to a disbeliever if he feels scared of the end and skeptical of everything. A disbeliever may gain a lot of money, but will surely lose himself.

Worshipping Allah as an Aim

On the contrary, faith in Allah gives the believer the purpose of life that he needs. In Islam, the purpose of life is to worship Allah. The term "Worship" covers all acts of obedience to Allah.

The Islamic purpose of life is a standing purpose. The true Muslim sticks to this purpose throughout all the stages of his life, whether he is a child, adolescent, adult, or an old man.

Worshipping Allah makes life purposeful and meaningful, especially within the framework of Islam. According to Islam this worldly life is just a short stage of our life. Then there is the other life. The boundary between the first and second life is the death stage, which is a transitory stage to the second life. The type of life in the

second stage a person deserves depends on his deeds in the first life. At the end of the death stage comes the day of judgment. On this day, Allah rewards or punishes people according to their deeds in the first life.

The First Life as an Examination

So, Islam looks at the first life as an examination of man. The death stage is similar to a rest period after the test, i. e. after the first life. The Day of Judgment is similar to the day of announcing the results of the examinees. The second life is the time when each examinee enjoys or suffers from the outcome of his behavior during the test period.

In Islam, the line of life is clear, simple, and logical: the first life, death, the Day of Judgment, and then the second life. With this clear line of life, the Muslim has a clear purpose in life. The Muslim knows he is created by Allah. Muslims know they are going to spend some years in this first life, during which they have to obey God, because God will question them and hold them responsible for their public or private deeds, because Allah knows about all the deeds of all people. The Muslim knows that his deeds in the first life will determine the type of second life they will live in. The Muslim knows that this first life is a very short one, one hundred years, more or less, whereas the second life is an eternal one.

The Eternity of the Second Life

The concept of the eternity of the second life has a tremendous effect on a Muslims during their first life, because Muslims believe that their first life determines the shape of their second life. In addition, this determines the shape of their second life and this determination will be through the Judgment of Allah, the All just and Almighty.

With this belief in the second life and the Day of Judgment, the Muslim's life becomes purposeful and meaningful. Moreover, the Muslim's standing purpose is to go to Paradise in the second life. In other words, the Muslim's permanent purpose is to obey Allah, to submit to Allah, to carry out His orders, and to keep in continues contact with Him through prayers (five times a day), through fasting (one month a year), through charity (as often as possible), and through pilgrimage (once in one's life).

The Need for a Permanent Purpose

Disbelievers have purposes in their lives such as collecting money and property, indulging in sex, eating, and dancing. But all these purposes are transient and passing ones. All these purposes come and go, go up and down. Money comes and goes. Health comes and goes. Sexual activities cannot continue forever. All these lusts for money, food and sex cannot answer the individual's questions: so what? Then What?

However, Islam saves Muslims from the trouble of asking the question, because Islam makes it clear, from the very beginning, that the permanent purpose of the Muslim in this life is to obey Allah in order to go to Paradise in the second life.

We should know that the only way for our salvation in this life and in

the hereafter is to know our Lord who created us, believe in Him, and worship Him alone.
We should also know our Prophet whom Allah had sent to all mankind, believe in Him and follow Him. We should, know the religion of truth which our Lord has commanded us to believe in, and practice it ...
Those in search of truth
Who have an open mind and heart,
Islamic Education Foundation
Welcome You.
Objectives: -
To Convey the message of Islam
To Educate Muslims about Islam
To keep in close contact with new Muslims.
Activities:
Offering Courses and presenting lectures about Islam in several languages.
Teaching Islam and Arabic.
Teaching new Muslims to receive the Holy Quran.
Helping Non- Muslims embrace Islam and complete the required procedures

Say, I dropped the Eavesdropper trap dipole from my line-up and will try something
else next year.

Just not enough lowband performance here as compared to the wires.

Guess I'll try to sell it sometime.

I wonder if Thorpe will ever go back to designing receivers.

On Oct 27, 4:18 am, abdo911 <jipksa...@gmail.com> wrote:
> What is your purpose in life? What is the rationale behind our life?

Must there be a single purpose or rationale? Why?

> Why do we live in this life? These questions frequently intrigue
> people who try to find accurate answers.

Perhaps this has more to do with ill-conceived questions than with the
lack of satisfactory answers.

> People provide different answers to these questions. Some people
> believe the purpose of life is to accumulate wealth. But one may
> wonder: What is the purpose of life after one has collected colossal
> amounts of money?

I don't know. To collect even more colossal amounts of money, perhaps?

What then? What will the purpose be once money is
> gathered?

This would probably depend upon why money is being gathered in the
first place. Perhaps someone
simply wants a lot of money so that they no longer have to think about
money, so that they can relax and
not worry about how to pay the rent anymore. Is that so wrong?

If the purpose of life is to gain money, there will be no
> purpose after becoming wealthy.

Why not? Perhaps the purpose would be to become even more wealthy, or
to care for one's kids, or to open an animal shelter,
or to do any one of a million things that you might find rewarding and
gratifying. Perhaps the 'problem' with life is not that it lacks
purpose but makes available *too many* purposes.

And in fact, here lies the problem of
> some disbelievers or misbelievers at some stage of their life, when
> collecting money is the target of their life. When they have collected
> the money they dreamt of, their life loses its purpose.

You assume that these people are collecting money just for the sake of
collecting money and not for some other end.
This seems questionable.

They suffer
> from the panic of nothingness and they live in tension and
> restlessness.

Many people who aren't particularly interested in money suffer from
this as well.

> Can Wealth Be an Aim?
> We often hear of a millionaire committing suicide, sometimes, not the
> millionaire himself but his wife, son, or daughter. The question that
> poses itself is: Can wealth bring happiness to one's life? In most
> cases the answer is NO.

Can poverty and/or debt bring unhappiness to one's life? In nearly all
cases the answer is YES.

Is the purpose of collecting wealth a standing
> purpose? As we know, the five-year old child does not look for wealth:
> a toy for him is equal to a million dollars. The eighteen-year old

> temporary or self destructive.

You certainly haven't established any of this so far.

> What is the use of wealth to a disbeliever if he feels scared of the
> end and skeptical of everything.

Perhaps the disbeliever wants to load up on lots of expensive radio
gear. Pehaps his kid needs an operation. Maybe the
rent is due. Etc.

A disbeliever may gain a lot of
> money, but will surely lose himself.

If so, he can give all his money away. The debt collectors will surely
find him, and thereby enable him to find himself!

> Worshipping Allah as an Aim
> On the contrary, faith in Allah gives the believer the purpose of life

2887. DST/Summer Time

Newsgroup: rec.radio.shortwave
Date: 2007-10-27 20:16:35 UTC
From: Tester <teest@test.org>
Message-ID: <m357i3hfa5cdop3g01g9kel54d233efdln@entropy.org>
Source record: 128807

From the stream of Radio National at abc.net.au it appears that NSW, Victoria and ACT are now on +11/Australian Eastern Summer Time.

Tasmania went ahead on the first Sunday in October, Queensland is staying on +10, Southern Australia is going on +10, the Northern Territory is staying on +9 and, according to

http://wwp.greenwichmeantime.com/

Western Australia will go on an experimental summer time (+9) on 1 Dec.

Of course, Europe is going off summer time at 0100 GMT Sunday (so France back to +1 and England back to GMT) and those areas in the U.S. and Canada which are on DST go off next Sunday at 2 A.M. local.

Hmm - interestjng - according to that website, Eastern Indiana went "double daylight" from 2006. The farmers in Eastern Indiana have always fought against Eastern Daylight Time as "double daylight", saying that Indianapolis belongs geographically on Central time so having Eastern Standard Time is the equivalent of year-around DST. In Queensland, Australia, on the other hand, the farmers won over the people on the "gold coast" who wanted summer time.

But my XP time applet still has a separate entry for Indiana time. I suppose that the Windows update took care of adding DST to the Indiana zone without changing its existence as a separate zone.

Message-ID: <1193536780.688833.132030@z9g2000hsf.googlegroups.com>
Source record: 128819

There's a particular spot at my home QTH that would be good for a transmit antenna for 2 meters / 70 cm. Right now I'm picturing a j-pole made of copper tubing in that spot. The only hitch is that one 20 to 25 ft long section of the coax feedline to this antenna will need to run parallel to the coax feed to my hf receive-only loop. Within this 20-25 ft long span, the feedlines would be separated by about a foot.

How concerned should I be about this, given that I'll probably never be using be using these antennas at the same time. I'm guessing the effects would be negligible. Am I wrong?

Should have heard this shi+hole of a frequency today
with the usual bunch of resident retards who set up
shop here chasing away the CQWW DX clowntesters
whenever they came within 5khz of the same. It didn't matter
nobody was using the freq, just as long as they had an excuse
to QRM the same whenever a clowntester came near.
Jeeze I wish that I had that much free time on my hands.
I'd love to see some photos of what some of the 14.275 morons
look like, prolly all of 'em are fat bulbous middle-aged white trailer
trash men who stay at home an let their wives work or are out
on disability because they weigh 300+ pounds an eat at
McDees 4 days a week.

- If only Sirius would not constantly interrupt WRN programming with
- various sporting events. On the weekends, it's often the case that
- WRN programming is absent from its alotted channel.

Junius - That would be Sinus 'Enhanced' Snort's Programming !

The "World Radio Network" (WRN)
WRN => http://www.wrn.org/about/
* DXing with Cumbre - Marie Lamb
* World of Radio - Glenn Hauser

* WRN English for North America

In Canada, CBC Radio produces a special 'Overnight'
service made up of many of the Programs from the
"World Radio Network" (WRN) partners.

The current "CBC Radio Overnight" Program Schedule is:
Weekday Schedule (Monday mornings to Friday mornings)
1:05 a.m. Radio Netherlands
2:05 a.m. Radio Sweden and Radio Australia
3:05 a.m. Channel Africa
4:05 a.m. Deutsche Welle and Radio Polonia
5:05 a.m. Radio Australia, Radio Prague,
Deutsche Welle and Voice of Russia

Weekend Schedule (Saturday and Sunday mornings)
1:05 a.m. Radio Netherlands
2:05 a.m. Radio Prague and Voice Of Russia
3:05 a.m. Radio Sweden and BBC World Service
4:05 a.m. Deutsche Welle
5:05 a.m. Radio Australia

For more "CBC Radio Overnight" Program Schedule
OVERNIGHT => www.cbc.ca/overnight/schedule.html

The "World Radio Network" (WRN) via Shortwave Radio
"WRMI" 7,385 kHz and 9955 MHz, Miami, FL
WRMI is a re-broadcasting WRN partner.
This schedule can change without notice
so please refer to => www.wrmi.net

WRN => http://www.wrmi.net/program.php?id=30
World Radio Network Schedule -via- WRMI :
1600-2300 UTC Monday-Friday on 9955 kHz

and now you know -cause- i told you ~ RHF

The USA has no radical Muslim problem in its hemisphere. We created
Al Qaeda to fight the Soviets and then we told them to get screwed.

When the USA is wrong I'm not afraid to say so. That's step one of
solving the problem. Denial don't fix anything.

Indiana is still on two time zones starting this year.
The eastern part of the state is on Eastern (and daylight time).
Western counties near Chicago are on Chicago time.
Western counties in the south are on Central time.
Most counties, ~80 of the 92 are on Eastern.

Are they at least playing some nice Latin jazz or are you getting
loaded up with news from your point of view?

Whether he needs one or not? What if he has a nice beam on a rotor -
should he take that down and put up a dipole?

2948. Ten-Tec RX-340 On Sale!

Log-periodic on a rotor perhaps...

I meant that FM is better with a proper antenna.

Like general consumers are going to that much trouble for lousy FM
radiom that doesn't offer personalized music services such as
slacker.com and pandora.com.

2957. Tentec/Globe Wireless RX321

Newsgroup: rec.radio.shortwave
Date: 2007-10-29 00:04:09 UTC

Gross generalization - take aseat at the entrance of a mall someday and
tellme then about overweight and slovenly

Facts are from
http://www.cbsnews.com/stories/2002/01/31/health/main326811.shtml

Americans can't stop eating. That's the conclusion of a federal survey that
estimates 6 in 10 Americans are overweight, more than 1 in 4 obese. The
conclusion: too many of us consume too much and exercise too little.

Some chronic overeaters admit that they are generally lazy and spend too
much time sitting around and eating their goodies instead of walking.

The findings, part of the 1999 National Health and Nutrition Examination
survey measured the height and weight of more than 1600 people over 20.
Results show 61% of Americans are overweight, 35% moderately overweight and
26% obese. That's up slightly from the last survey.

Lamont

Like David said, just take an old rummage sale portable and set it by the other radio and put it on the same band and tune on it till you get a squeal. I think it will be higher up the dial by what the I. F. freq is. With a little effort on tuuning around you can tune in ssb well enough to listen to. I Did this many years ago before I had a radio with a bfo. Maybe you could take a trip to the Good Will store an find a cheepie. Dan

Interesting facts...and while you feel that it may be a "gross"
generalization, you did right with the word 'gross'. I agree
completely with your facts about the mall and, unfortunately,
Americans in general.

My point was that hamfests are a small visual capture point of the 'fat ass' status that many persons have attained. Since the overwhelming attitude of many hams is that they are better than the average person, you'd think that those persons might just try a little harder than become a number in your statistics.

- Like general consumers are going to that much trouble for
- lousy FM radiom that doesn't offer personalized music
- services such as slacker.com and pandora.com.

Pocket Radio - DOH ! - 'general consumers' - Double DOH ! !

Reality Check - This is a 'Radio Enthusiast' Forum and just about
everyone who read and/or Posts to the Rec.Radio.Shortwave
Newsgroup is a DXer of some sort.

-Hello- "General {Radio} Consumers" We Ain't !

This Newsgroup Is About :

All Things Shortwave Radio to include Listening to : International
Shortwave Radio Broadcasts; Amateur/Ham Radio, Utility Signals,
etc, Etc. ETC !

Plus AM/MW Radio DXing

Also FM Radio DXing

Including What We Hear With Our Own Ears On-The-Radio

IMHO - Any DXer worthy of being called a DXer uses an
External Antenna along with their Radio/Receiver to Hear
the Distant (DX) Signal that They are After.

Pocket Radio - Internet Radio Ain't Radio -and- It Sure Ain't DXing
[.]

pocket radio - do you 'dx' ? ~ RHF
your posts suggest that you are just a 'slacker' want to be . . .
living in a self-made 'pandora' of virtual '.com' reality
.

2973. Effective IT Contract Negotiations

Newsgroup: rec.radio.shortwave
Date: 2007-10-29 12:20:20 UTC
From: ciotalk@gmail.com
Message-ID: <1193660420.225280.54610@i13g2000prf.googlegroups.com>
Source record: 128993

How we negotiate the IT services or software licensing related contracts has a significant impact on how IT meets "getting more done with less" expectations set by executive management. How do we plan and carry out such negotiations for success? Is outsourcing such contract negotiations a good option?

Click here to listen live: http://www.ciotalkradio.com/archives.html

2974. Adopting Enterprise Virtualization: A Practitioner's Perspective

Newsgroup: rec.radio.shortwave
Date: 2007-10-29 12:21:08 UTC
From: ciotalk@gmail.com
Message-ID: <1193660468.492022.260920@k35g2000prh.googlegroups.com>
Source record: 128844

While Enterprise Virtualization technology has tremendous potential what does it take for an IT leader to get it introduced and adopted in his/her organization in a planned fashion? What are the challenges and possible remedies?

Pocket Radio,

Posting your self-portrait doesn't help your argument.

~ RHF

You sed "Since the overwhelming attitude of many hams is that they are
better than the
average person"

The over 500 hams in San Diego who manned shelters, hospitals, animal
rescue, Red Cross, ARES, and RACES during the fires would disagree with you.
Many spent long communication shifts during the week long disaster. Many
city officials here commended the Amateur Radio community for their efforts.
And no one cared if they were overweight.

Lamont

#1. Paper argument. Before 9/11 the military would of never shot down a
civilian airliner full of citizens..
You know that. So it makes no difference for arguments sake that there
is a military defense system in the flight path.

#2. Look at who you are saying pulled this off..... THE BUSH ADMIN. I
mean com'on. Have you been paying ANY
attention to their competence over the last 7 years? That should be
enough to dispel ANY conspiracy theories connecting
them to planning AND PULLING OFF the towers collapse. We are lucky every
day we wake up and don't find the country
in full collapse from horrible and embarrassing actions, policies and
public statements from them...........

"" In almost every clip you'll see little puffs of dust spurting out
from the sides of the towers. There are two competing explanations for
these puffs of dust: 1) the force of the collapsing upper floors
raised the air pressure in the lower ones so dramatically that it
actually blew out the windows.
And 2) the towers did not collapse from the impact of two Boeing 767s
and the ensuing fires. T
hey were destroyed in a planned, controlled demolition. The dust puffs
you see on film are the
detonations of explosives planted there before the attacks.

People who believe the second explanation live in a very different
world from those who believe the first. In world No.
2, al-Qaeda is not responsible for the destruction of the World Trade
Center. The U.S. government is. The Pentagon
was not hit by a commercial jet; it was hit by a cruise missile.
United Flight 93 did not crash after its occupants
rushed the cockpit; it was deliberately taken down by a U.S. Air
Force fighter. The entire catastrophe was
planned and executed by federal officials in order to provide the U.S.
with a pretext for going to war in the
Middle East and, by extension, as a means of consolidating and
extending the power of the Bush Administration.

$50,000 for only $5 in two months? You gotta be crazy! How can you make $50,000 for only $5? Well, that's what I was wondering too until I came across this letter.

First of all, IT'S PERFECTLY LEGAL! (Call 1-800-725-2161) if you have any questions about the following opportunity to make $50,000.00 and that probably WITHIN LESS THAN TWO MONTHS!

Well, here it goes: A little while back, I was browsing these newsgroups, just like you are now, and came across an article similar to this that said you could make thousands of dollars within weeks with
only an initial investment of $5.00! So I thought, "Yeah, right, this must be a joke," but like most of us I was curious, so I kept reading. Anyway, it said that you send $1.00 to each of the 5 names and address
stated in the article. You then place your own name and address in the
bottom of the list at #5, and post the article in at least 200 newsgroups. (There are thousands) No catch, that was it.

As I mentioned before, like most of us I was a little skeptical and a little worried about the legal aspects of it all. So I checked it out with the U.S. Post Office (1-800-725-2161) and they confirmed that it is indeed legal!

What are the basics of each system and why are they legal? Each system
follows the same basic steps which define a business by offering others
the ability to get involved using the system you advertise in newsgroups
on the Internet and accepting a small fee for the requests of those who
respond to be added to your mailing list. Yes, you will be in the business of creating your own mailing list. Their requests to be added
to your mailing list which is sent with a $1 fee for your service define
a legal business opportunity under U.S. Postal and Lottery Laws --- a legal business opportunity for you which is covered in title 18, sections 1302 and 1342 of the U.S. Postal and Lottery Laws.

Now, what one does, or does not do, with the mailing list being constructed is a personal decision. One could decide to do nothing with this list, to use it as a tool in building another business or

expanding an existing business. This decision is up to the creator of the mailing list -- this decision is up to you.

Make sure you print a copy of this article NOW, so you can get the information off of it as you need it. The process is very simple and consists of 3 easy steps:

STEP 1: Get 5 separate pieces of paper and write the following on each
piece of paper "PLEASE PUT ME ON YOUR MAILING LIST." Now get 5 $1.00 bills and place ONE inside EACH of the 5 pieces of paper so the bill will not be seen through the envelope to prevent thievery. Next, place
one paper in each of the 5 envelopes and seal them. You should now have
5 sealed envelopes, each with a piece of paper stating the above phrase
and a $1.00 bill. What you are doing is creating a service by this. THIS IS PERFECTLY LEGAL! Mail the 5 envelopes to the following addresses:

#1 G. Duchacek
1825 Lee Janzen Drive,
Kissimmee Bay,
Kissimmee, FL. 347347

#2 T. Roberts
4810 Meadow Lark Lane
Paso Robles, CA 93446-4220

#3 D. Wild
32 Ridgeview Circle
Milan, Oh 44846

#4 Smith
935 E. South
Independence, MO 64050

#5 t. rojas
42-40 212st apt 3a
bayside, ny 11361

STEP 2: Now take the #1 name off the list that you see above, move the
other names up (2 becomes 1, 3 becomes 2, etc.....) and add YOUR Name as number 5 on the list.

STEP 3: Change anything you need to, but try to keep this article as close to original as possible. Now, post your amended article to at least 200 newsgroups. (There are over 35,000 groups with more being added all the time) All you need is 200, but remember, the more you post, the more money you make! Don't know HOW to post in the newsgroups?

Well do exactly the following:

FOR NETSCAPE USERS:
1) Click on any newsgroup, like normal. Then click on "To News", which
is in the top left corner of the newsgroup page. This will bring up a
message box.

2) Fill in the SUBJECT with a flashy title, like the one I used,
something to catch the eye!!!

3) Now go to the message part of the box and retype this letter exactly
as it is here, with exception of your few changes. (remember to add your
name to number 5 and move the rest up)

4) When your done typing in the WHOLE letter, click on 'FILE' above the
send button. Then, 'SAVE AS..' DO NOT SEND YOUR ARTICLE UNTIL YOU SAVE
IT. (so you don't have to type this 200 times :-)

5) Now that you have saved the letter, go ahead and send your first
copy! (click the 'SEND' button in the top left corner)

6) This is where you post all 200! OK, go to ANY newsgroup article and
click the 'TO NEWS' button again. Type in your flashy subject in the
'SUBJECT BOX', then go to the message and place your cursor here. Now
click on 'ATTACHMENT' which is right below the 'SUBJECT BOX'. Click on
attach file then find your letter wherever you saved it. Click once on
your file then click 'OPEN' then click 'OK'. If you did this right, you
should see your filename in the 'ATTACHMENT BOX' and it will be
shaded.
NOW POST AWAY!

FOR INTERNET EXPLORER:
It's just as easy, holding down the left mouse button, highlight this
entire article, then press the 'CTRL' key and 'C' key at the same time
to copy this article. Then print the article for your records to have
the names of those you will be sending $1.00 to.

Go to the newsgroups and press 'POST AN ARTICLE' type in your flashy
subject and click the large window below. Press 'CTRL' and 'V' and the
article will appear in the message window. **BE SURE TO MAKE YOUR
ADDRESS CHANGES TO THE 5 NAMES.** Now re-highlight the article and
re-copy it so you have the changes.... then all you have to do for each
newsgroup is 'CTRL' and 'V' and press 'POST'. It's that easy!! THAT'S

IT! All you have to do is jump to different newsgroups and post away, after you get the hang of it, it will take about 30 seconds for each newsgroup!

REMEMBER, THE MORE NEWSGROUPS YOU POST IN, THE MORE MONEY YOU WILL MAKE!! BUT YOU HAVE TO POST A MINIMUM OF 200

**If these instructions are too complex to follow, try Forte's "Free Agent." It is freeware for noncommercial use. To download it, simply use a search utility and type "Forte Free Agent". You should be able to
find it.**

That's it! You will begin receiving money from around the world within days! You may eventually want to rent a P.O. Box due to the large amount
of mail you receive. If you wish to stay anonymous, you can invent a name to use, as long as the postman will deliver it. **JUST MAKE SURE ALL THE ADDRESSES ARE CORRECT.**

Now the WHY part: This entire principle works because it is in a format
of an upside down tree with thousands of branches. Everyone below you will see to it that the tree continues because they want to get money.
Those below THEM will continue because THEY want to get the cash etc.
Out of 200 postings, say I receive only 5 replies (a very low example).
So then I made $5.00 with my name at #5 on the letter. Now, each of the
5 persons who just sent me $1.00 make the MINIMUM 200 postings, each ith my name at #4 and only 5 persons respond to each of the original 5,
that is another $25.00 for me, now those 25 each make 200 MINIMUM posts
with my name at #3 and only 5 replies each, I will bring in an additional $125.00! Now, those 125 persons turn around and post the MINIMUM 200 with my name at #2 and only receive 5 replies each, I will make an additional $626.00! OK, now here is the fun part, each of those
625 persons post a MINIMUM of 200 letters with my name at #1 and they each only receive 5 replies, that just made me $3,125.00!!! With a original investment of only $5.00! AMAZING! And as I said 5 responses is actually VERY LOW! Average is probable 20 to 30! So lets put those figures at just 15 responses per person. Here is what you will make:

at #5 $15.00
at #4 $225.00
at #3 $3,375.00
at #2 $50,625.00
at #1 $759,375.00

Your name is no longer on the list, you just take the latest posting in
the newsgroups, and send out another $5.00 to names on the list, putting
your name at number 5 and start posting again. The thing to remember is
that thousands of people all over the world are joining the Internet and
reading these articles everyday, JUST LIKE YOU are now!! And this will
go on and on and on and on.... get the picture? Well, there's over
5,000,000,000 people on the world and most of them will eventually end
up being hooked into the Internet. So there are virtually unlimited
resources. Of course this will work the best at the very beginning so
the faster you post, the better for YOU!

So can you afford $5.00 and see if it really works?? I think so! People
have said, "what if the plan is played out and no one sends you the
money? So what! What are the chances of that happening when there are
tons of new honest users and new honest people who are joining the
Internet and newsgroups everyday and are willing to give it a try?
Estimates are at 20,000 to 50,000 new users, every day, with thousands
of those joining the actual Internet. Remember, play FAIRLY and
HONESTLY and this will work. You just have to be honest. Make sure you
print this article out RIGHT NOW, also. Try to keep a list of everyone
that sends you money and always keep an eye on the newsgroups to make
sure everyone is playing fairly.

Remember, HONESTY IS THE BEST POLICY. You don't need to cheat the basic
idea to make the money!! GOOD LUCK to all and please play fairly and
reap the huge rewards from this, which is tons of extra CASH. **By the
way, if you try to deceive people by posting the messages with your name
in the list and not sending the money to the rest of the people already
on the list, you will NOT get as much. Someone I talked to knew someone
who did that and he only made about $150.00, and that's after seven or
eight weeks! Then he sent the 5 $1.00 bills, people added him to their
lists, and in 4-5 weeks he had over $10k. This is the fairest and most
honest way I have ever seen to share the wealth of the world without
costing anything but our time!!! You also may want to buy mailing and
e-mail lists for future dollars. Please remember to declare your extra
income. Thanks once again.

2999. OT: Where to buy parts for the Eton E10

Newsgroup: rec.radio.shortwave
Date: 2007-10-30 02:04:58 UTC

Tuning encoder for the E10.
Syptom: numbers in frequency readout jump/stick while turning the tuner in either fast or slow mode.
Eton says they don't carry them.
Their recommended do have them but want to install-charge labour/shipping etc, time spent in transit.
Must be somewhere to obtain this very small, fairly inexpensive part without all the hastle.
Will never buy any Eton products again if parts aren't available for sale to the customer.
Had the same problem with Kenwood when the PLL went out on my R-5000.
They wanted $200 to do the repairs. They are the only ones with the chips since they bought up all available stock before the manufacturer went under.
Refused to sell one to me. I think the chip was worth about $8, then they pile another $192 on the bill for shipping and labor. Not a chance, it's packed away in the basement probably never to operate again.

Have you tried ACE Electronics? They used to handle parts and service for
Grundig. Only e-mail I seem to have left is for Scott Inman, who worked
there in 2001.. don't know if he's still there or not.

Hello.

I am a total n00b, just got a shortwave radio.

Can I catch any radio from Poland, or polish radio in the USA?
I am in the Chicago area of the USA.

What freq. would I look for?

I appreciate any help, advise. I apologize for a newbie question.
Many thanks.

That's not raqdio, Sparky. You need a POS computer to get it to work.

I take a small SSRI every night, as well. But that has nothing to do
with the failure of civilization.

Dear Justis,

I checked PartStore but they do not stock Eton/Grundig/Lextronix parts. Your best bet is to remove the encoder and see if there are any identifying numbers on it. Then telephone Allied Electronics at < 1-866-433-5722 > (their website is < http://www.alliedelec.com/ >). If anyone can help you, they can. If, however, they are unable to do so, then your most cost-effective alternative would be to forget about this particular radio and buy something else. You can buy shortwave portables equal or better than your Eton E-10 for less than $100.00 (sometimes MUCH less) or you can buy my personal favorite shortwave portable, the Sony ICF-SW7600GR ($150.00 or less). In addition to performing better than any other compact shortwave portable currently on the market, it is built like a tank. I personally have never had any problem whatsoever with my units (I own 5 '7600GRs and 2 '7600Gs), most of which are over five years old and are used extensively. Not only that, but, in the event that you did need replacement parts, they are easily and (relatively) inexpensively available at PartStore < http://www.partstore.com/Model/Sony/Sony/ICFSW7600GR.aspx?ModelAliasNumber=icf-sw7600gr >. (I have purchased a few replacement telescoping antennas from them "just in case.") Others here may disagree with me, but, again, I believe that, at the current time, regarding compact shortwave portables, the Sony ICF-SW7600GR is the best there is.

Best of luck,

Joe

Perhaps if you did not see civilization as having failed your spirits would be higher and not feel the need for the SSRI. Most SSRI's carry with them side effects that are not good for the very same psyche they are trying to help: eg. weight gain is common and being heavy can lead to depression which is what the SSRI is trying to abate; also SSRI's can cause ED issues which again contribute to depression and the goal of the SSRI is abate depression. David, you seem to be caught in an endless spiral that is detrimental to your mental well being. My suggestion is to ween yourself from the SSRI's, stick to smoking a joint in the evening as opposed to drinking a martini and realize that

the world just isn't what most of us think it should be. Concentrate on making your little corner of it better and give up on converting members of this newsgroup to your point of view. Oh - you still have my and I'm sure most folks - permission to pick on Edweenie.

Slacker is coming out with a portable version and Pandora is already
on Sprint cell phones, ready to be streamed in-dash via Ford's new
standard/optional Sync - LOL HD Radio!

3030. Heard Jazz Music on 1410 kHz @ 4:27 AM PDT

Newsgroup: rec.radio.shortwave
Date: 2007-10-30 18:45:05 UTC
From: RHF <rhf-newsgroups@pacbell.net>
Message-ID: <1193769905.390863.171140@v23g2000prn.googlegroups.com>
Source record: 128900

Heard Jazz Music on 1410 kHz @ 4:22 AM PDT and more
Jazz Music throught 4:47 AM -but- No Radio Station ID.
- - - Heard on 30 OCT 2007

Consider all the possibilities on 1410 kHz starting with
CFUN 50 KW from Vancouver, BC Canada to KERN,
KMYC, and KCAL all here in California.
http://www.fcc.gov/fcc-bin/amq?state=&call=&arn=&city=&freq=1410&fre2=1410&type=0&facid=&class=&list=1&dist=&dlat2=&mlat2=&slat2=&NS=N&dlon2=&mlon2=&slon2=&EW=W&size=9

None that I checked on Radio Locator had a 'Jazz Music' format.
RADIO LOCATOR => http://www.radio-locator.com/

KRML on 1410 kHz is 500 Watts Days in Carmel, CA
http://www.radio-locator.com/cgi-bin/finder?sr=Y&s=C&call=KRML
-but- only 16 Watts Nights and plays 'Jazz'.
* Carmel-By-The-Sea, California -USA-
http://en.wikipedia.org/wiki/Carmel-by-the-Sea,_California

So it had to be KMRL on 1410 kHz at around 4:30 AM
at 16 Watts and about 150 Miles distance. - Not Bad !

yes - i heard it while listening to my radio ~ RHF

I've actually gotten back into wefax and ute decoding after being out
of it for 15 years. Most of my faves are gone, but there's still some
good listens out there. I'm actually thinking about getting my ticket
now that I've got a little time.

Sangean AT-803 with 50ft dipole, 40N, 105W

I just got back into the hobby after 15 years out. With my equipment (AT-803 with 50ft dipole) I've logged most of the NOAA meteorology wefax stations that are left (all except Kodiak Alaska) and a couple of the Canadian ones. I'm afraid local conditions aren't letting me pick up anything beyond that, though.

My catches with decent images are New Orleans, Boston, Pt. Reyes, Nova Scotia, and Honolulu so far.

Any other CONUS stations I could go for? TIA. I'm at 40N105W.

I'm going to remove it tonite for examination. Very small. I've already sprayed it with contact spray (and blown the excess out with compressed air). Still the same.
I will contact Allied if there are any identifying marks etc. 'Hope so.
As for the 7600, it's the next one I have targeted for purchase. 'Read the reviews etc.,
http://stephan.win31.de/sony7600.htm, and it seems like a well built set with the bugs worked out of it.
My best one is my Zenith R7000.....love that radio!
Thanks everyone for your help....great bunch when 'ya need 'em. Thanks again.

> Anyone here have any real-life experience using the 746 or 756 as an
> SWL receiver? If so, I'd love to hear about it.

The 746Pro makes a great SWL DX receiver. I think it is better than a 756 Pro. I have not tried the 756 Pro II or III.

The ergonomics on the JRC NRD545 are much better than the 746Pro. Or just about an receiver I have used.

In terms of DX performance & audio recovery.... the 746Pro is really hard to beat.

All IMHO

Also the VHF coverage on the 746Pro includes the Military "Victor" Air to Air band. Approx 138-143 mhz. If you have any MilAir communications in your area the AM receive on these signals is fantastic.

BTW soda if you would like to look at my modest listening shack go to www.QRZ.com and lookup my callsign kg4big as I have a picture there.

>From Taylor on Radio-Info today:

"A survivalist mentality"?

"It's like many radio management people are trying to hang on, until they can get out."
I've written before about this dangerous mindset - where even some very senior guys are thinking in their heads "just give me two more good years, and I'm out, and to heck with the future." Now out of nowhere, I get this strong letter from Mike Buxser, the VP/Market Manager at West Virginia Radio Corporation in Charleston. Mike says "after attending the NAB in Charlotte, I'm really concerned about the future of our business, and it's not because of external forces. It's the internal forces. The demise of radio is preached much more by radio people than by others. After listening to several doom-and-gloomers at the convention I thought, what's with these people? There's an almost survivalist mentality, like they are circling the wagons and trying to hang on until they can get out." Mike says he experienced that vibe at a previous job situation, and was even thinking about whether he wanted to stay in the business. Now he says "we need leaders in this industry who want to be in it and are meeting the new challenges with an eye to today and the future. Vision, enthusiasm and pride are keys to our future. Frankly, I didn't experience a lot of that in Charlotte. It dawned on me that, in the words of the old Pogo comic strip, 'We have met the enemy, and he is us.'"

Radio is dying, buddy - HD Radio isn't going to save it, just destroy it faster!

3041. Satrad subscriptions up, Eduardo!

Source record: 128912
Cross-posted to: rec.radio.scanner,rec.radio.shortwave

Hi,

I'm considering purchasing a WR-305e or a WR-315e. I want to use it for monitoring some VHF/UHF digital communications.

I've read a lot of bad things about Winradio, but most of what was written is old. I'm wondering if people still don't like the Winradio receivers or if they've finally earned some respect.

I must have a receiver that can provide a digital stream via USB to a computer. This can be digital audio, I/Q samples out of an ADC, or a digitized IF. I can not use the computer's sound card for digitization. What other receivers should I consider? I can't find anything that competes with the WR-3x5e.

The WR-305e is around $750 and I think the WR-315e is around $2500. I'm not sure if I need the better receiver for my application.

Thank you very much for any information or advice you might provide.

John

Not calling me 'Nigger' today, you drunkard?

Tell us how much you paid for your commission as Supreme Commander,
Acehole. Ten dollars? Twenty? Your troops certainly don't ask for much
substance in their leadership and that would readily explain the very
reasonable fee.

is anyone hearing the B07 Voice of Russia frequencies clearly? my
reception is terrible here in Los Angeles. you'd think, with all
their transmitters, the Russkies could get a decent signal over here,
as their Chinese comrades do on CRI.

3050. Effective IT Contract Negotiations

Newsgroup: rec.radio.shortwave

Source record: 128921

How we negotiate the IT services or software licensing related contracts has a significant impact on how IT meets "getting more done with less" expectations set by executive management. How do we plan and carry out such negotiations for success? Is outsourcing such contract negotiations a good option?

"Let's Play Music Media Trick or Treat?"

"Trick. Buy an HD radio and you get many new channels of music and radio programming. No. Buy an HD radio and get taken for a fool. The radio operators, however, won't be taken for fools. They're investing relatively nothing in the future of HD (wisely for them) and propping up the HD proponents with a meaningless HD initiative. (HD is the equivalent of trick or treating and returning home with an Apple that has a razor blade in it)."

"Trick. That diary-based radio ratings are more accurate and reliable than the Portable People Meter. Are you kidding? I want to be WCBS-FM when the PPM kicks in and they get credit for all the listeners they've always had but were never recorded manually in the diary. (I guess I'm saying the diary argument is the equivalent of a burning bag of dog dirt that is thrown on the front porch of an old grumpy person's house and when you ring the doorbell they run out and stomp out the fire and the...well, you get the picture)."

I'm not sure if this is a primary consideration, but if it is, consider
that there are small usb powered a/d devices -- like the Turtle Beach Audio
Advantage SRM for example -- that can provide you with a digital stream
over usb, independent of your pc's soundcard. That might enable you to
widen your radio search. Just a thought.

If so many people got ripped off - and "supposedly" many are in here - why not bump heads and start a class action law suit of some sort? Maybe - if you "include" E-bay - they'll wake up and take action - even if they are bumped from the case by other means. Just a thought.

Eton issued the following statement on 10/29/07:

Dear Valued Customers,

Recently, some information regarding the Grundig Satellit 1000/Grundig G1 was publicized. This information was inaccurate, as Eton Corporation's current plans do not include the introduction of this unit in the foreseeable future, most certainly through 2007 and 2008.

As you may know, our E1 and E1XM units represent some of the industry's best performing portable units, and have been awarded the prestigious "Passport's Choice" award from International Broadcasting's Passport to World Band Radio the last three years since its introduction. We are dedicated to these units, and to continually supporting our customers through the unit's innovations.

Thank you for your continued support and interest in Eton products.

Best regards,

Etón Corporation

I have a wire strung up around the room Im in. It has the plastic or rubber casing still on it. Would it improve reception by removing this plastic casing? The whip antenna, and any other antenna Ive ever seen doesnt have plastic casing on it, so it would seem there is a reason for that.

not realy the whip doesn't eed insulation becuase it is chrome plated
the insulation on the long wire is to make it end uses more flexible
and has little to do with this sort of app
t'

the wire used to make the long wiere anttenna is there so it ocould
have been brought and used in a circut as well

On that page, they have a listing for Daily transmissions on
11675 at 19:00 to 20:57 UTC for target area A (Eastern US).

Is that real, or is it a typo. (I think that it's probably
Saturday/Sunday only).

No, the plastic insulation has no effect at radio frequencies. Running
a longer wire outside (away from noise sources) would improve
reception.

-
- Art

Art,

-If- The Rest-of-the-World was really on a Time 'Metric' like the
"Metric System" then there would still be 24 Hours in a Day :
However there would not be 60 Minutes in an Hour -but-
100 Centi-Minutes (cm) in an Hour with a like number of
100 Centi-Seconds (cs) in a Centi-Minute.

24 Hours = One Day = 24 Hours

60 Minutes* = One Hour = 100 Centi-Minutes**

* 60 Seconds = One Minute

** 100 Centi-Minutes = 100 Centi-Seconds

One Centi-Minute {Decimal} = 0.6 Minute = 36 Seconds

One Centi-Second {Decimal} = 0.36 Second

http://en.wikipedia.org/wiki/Decimal_time

Junius,

I am still waiting . . . for news on the replacement for the
'Discontinued' Grundig Satellit Satellit 800 Millennium Radio
http://www.universal-radio.com/catalog/portable/0800.html

waiting, Waiting. WAITING ! ~ RHF

http://www.universal-radio.com/catalog/portable/0101.html

Exact same radio, but without the XM module. Renopithicus take note!

http://www.passband.com/2007/10

Presumably to be available from Universal from week of Nov. 5 - 9th.

3075. Adopting Enterprise Virtualization: A Practitioner's Perspective

Newsgroup: rec.radio.shortwave

I'm confused. I thought the E1 was the Satellit 800's successor. Is
that not right?

When GRUNDIG or SONY makes another high end portable, then wake me up.
